**No. 103**

# HOW TO USE THE Section Finder

A BLACK GUIDE MARK is printed on the outer margin of the first page of each section of this catalog. In each instance the guide mark is printed directly opposite the wording on this end sheet which refers to the particular section.

1—Fold back the pages of the catalog as shown in the illustration, which will expose the edges of the guide marks.

2—Place the thumb of the right hand on the mark opposite the marginal section which contains the kind of goods sought.

This will open the catalog at the beginning of the desired section.

## SECTION

CATALOG NO. 103

# GraybaR

## ELECTRIC COMPANY

YOU have in your possession what we believe to be the most complete catalog of electrical materials yet published. Approximately 50,000 items, covering most frequently or widely used items, are included. However, the scope of the electrical industry has increased so rapidly that even with this tremendous variety of listings you may not find just what you want. We hope, if this is true, that you will call our nearest office and warehouse (see list in back of catalog), and they will make every attempt to secure it for you.

PRICES IN THIS CATALOG ARE APPROXIMATE LIST PRICES  
AND SUBJECT TO CHANGE WITHOUT NOTICE

PRICE OF THIS CATALOG IS \$5.00 POSTPAID

# CLAYDA

CLAYDA

CLAYDA is a new and improved  
type of paper, made from the best  
materials, and is of a high  
quality. It is of a light color,  
and is very strong. It is of a  
high quality, and is very strong.

and is very strong. It is of a  
high quality, and is very strong.

## AT YOUR SERVICE

**GRAY**

**BARTON**

*A 79-Year Background of Experience*

### THEN

The illustration above of the two founders—Gray and Barton—whose names were combined to make Graybar, and the original factory, sales and office force, almost tells the story without words.

The business in those early days before electric lighting, before central stations, and in fact, before 98% of the electrical things so familiar today, was a very simple business.

Bells, Buzzers, Telegraph Equipment, and Annunciators were made in this small plant and sold by a top-hatted sales force of two or three men.

### NOW

Graybar makes available through more than 90 distributing houses, the products of nearly 300 manufacturers. From coast to coast and border to border, wholesale electrical buyers can find prompt, intelligent service on almost everything electrical. Dependable products, knowledge of your electrical needs and the willingness to stand back of everything we supply are also features of Graybar Service.

We hope that this catalog of 1116 pages, listing the more frequently used electrical items of all types, except household appliances, will prove of value to you.

## PRICES

Prices found in this catalog are revised to agree with the latest lists at the time of going to press. It is understood that they are subject to change without notice and are, therefore, not offered by us as a quotation. It is contemplated that all prices are for shipment from our warehouse unless otherwise specified.

## ORDERS

Where possible, we have placed opposite each article a catalog number. When ordering give the catalog number and description of the article required.

You are requested to specify the routing over which you prefer shipments to be made. In the absence of specific instructions, we shall use our best judgment in selecting the route, but we are not responsible for extra trucking expenses at destination.

## TERMS

Our terms are 30 days net from date of invoice.

Payments may be made by check, bank draft, postal or express money order, drawn to the order of or endorsed to the order of the Graybar Electric Company, Inc.

Payments in currency through the mails even if registered are not recommended and are at sender's risk. We are not responsible for loss or miscarriage of the mails.

Receipts are not issued for remittances unless requested. Our endorsement on remittance is acknowledgment of the receipt of the funds.

We solicit new accounts on a credit basis, and in order to give prompt service, request that where you are not rated by the Commercial Agencies, references or other information of a credit character be forwarded with the order. These will be immediately acted upon, and the results held in strict confidence for our sole use and, when reasonably satisfactory, shipment will follow with all possible dispatch.

To avoid the delay incidental to communicating with references, etc., it would be mutually convenient, when immediate shipment is desired, to send cash in advance or instruct us to ship C. O. D. by express, or parcel post (insured if so instructed) or by freight subject to sight draft through a local bank against bill of lading.

We shall advise the terms on future orders promptly after communications from references are received.

## RETURNED GOODS

We can take no responsibility for any material returned without our authorization. Where we give shipping instructions for returning goods, they should be carefully followed to avoid delay and difficulty in issuing credit.

## SHIPMENTS

As experienced packers are employed, and as reasonable care is used in packing, we cannot be held responsible for breakage in packages which are delivered in "good order" by the carrier.

Shipments of glassware are made at your risk.

Goods ordered to be shipped by parcel post will be sent only at the purchaser's risk of loss or damage.

Goods are sold f. o. b. shipping point unless otherwise specifically stated.

## RESPONSIBILITY

All statistical information contained in this catalog, pertaining to *Strength* and *Proper Working Loads* of material, tools or machines is derived from tables compiled by the Manufacturers thereof, and is reprinted by us for the convenience of the buyer. This information is necessarily based upon *use under proper working conditions*. We assume no responsibility by this reprint, and in no way do we give you a guarantee, expressed or implied, on any material.

**Habirshaw Small Diameter Building Wire**

600 Volts, N.E.C.

Habirdure—Type T &amp; TW

All Thermoplastic Insulated Type

Type T & TW Building Wire differs from the conventional rubber insulated braided building wires in that the insulation consists of a wall of Habirdure, a synthetic resin. Habirdure has exceptionally high dielectric strength, is practically non-aging and is highly resistant to moisture, oil, acids, and alkalis. The tough nature of the material makes it unnecessary to use a braided covering for protection against mechanical injury. The omission of an overall braiding reduces the outside diameter to a minimum and makes Type T & TW the smallest of the Building Wires. Its hard, smooth surface makes it extremely easy to pull. Type T & TW is furnished in a range of bright, fadeless colors which are unaffected under the roughest possible handling during installation.

Habirdure Type T is approved in the National Electrical Code as general purpose wiring for operation at 60°C. in sizes up to 4/0 A.W.G. Sizes larger than 4/0 are approved for open wiring only.

Habirdure is also approved by the Underwriters' Laboratories (Guide Card 460-190Y file E 13092) for the following uses:

On switchboards where oil is not present and temperatures do not exceed 80°C.

Within appliances when exposed to oil and temperatures not exceeding 60°C.

Within appliances when exposed to air and temperatures not exceeding 80°C.

Habirdure Type TW is approved for use in wet locations in place of lead covered cable when the temperature does not exceed 60°C.

Habirdure Type T & TW can be supplied in the following standard colors, black, white, red, green, orange, blue, yellow, brown and purple.

14	2	.21x.37	500	Coil	65
12	2	.23x.41	500	Coil	84
10	3	.27x.52	500	Coil	130
8	4	.33x.64	500	Coil	200
6	4	.38x.72	1000	Reel, 30"	340

Coils paper wrapped.

NOTE. For both cable and wire corrugated paper is used on reels up to 42 inches inclusive. Lagging is used only when specified. Sizes 48 to 84 inches inclusive, lagged.

## Reels

Some sizes and kinds of wires necessarily must be shipped on reels.

In such cases the reels will be billed at cost and credited at full billing value, if returned to mill in good condition within twelve months of shipping date.

Obtain return tags and shipping instructions before shipping reels.

## Habirshaw Rubber Covered Braided Wire Type RM, N. E. C. S.—3-Conductor—Solid 600 Volts

Each conductor of the 3-Conductor Rubber Covered House Wire is insulated by Black Core rubber compound. The covering over insulation is a 2 to 6 A.W.G., one rubber filled tape, and an 8 to 14 A.W.G., one saturated braid.

The conductors are grouped by twisting. They are filled with jute, covered by one rubber filled tape. The whole is covered by a saturated cotton braid.

Size A.W.G. Gauge	No. of Strands	Rubber Wall 64th Inch	Approx- imate O.D. Inches	Std. Pkg. Feet	Type Package	Shipping Wt., Lbs. per 1000 Feet
14	1	3	.413	1000	Reel, 30"	128
12	1	3	.450	1000	Reel, 30"	165
10	1	3	.579	1000	Reel, 30"	260
8	1	4	.703	1000	Reel, 36"	401
6	1	4	.792	1000	Reel, 36"	572

NOTE.—Corrugated paper used on reels up to 42 inches, inclusive, lagging used on above sizes only when specified. Sizes 48 to 84 inches inclusive, lagged.

## Habirshaw Rubber Covered Braided Cable Type RM, N.E.C.S.—3-Conductor—Stranded 600 Volts

The 3-conductor stranded code house cable is used under the same conditions as solid 3-conductor code house cable unless greater flexibility is required, especially in larger sizes.

Number of conductors, 3.

Range of sizes, 500,000 cm to 14 A. W. G., stranded.

Insulation on each conductor, "Black Core" rubber compound.

Covering over insulation, 500,000 cm to 6 A.W.G., one rubber filled tape, 8 to 14 A. W. G., one saturated braid.

Grouping of conductors, twisted.

Fillers, jute.

Covering over jute, one rubber filled tape.

Covering over all, one saturated braid.

Size A.W.G. Gauge	No. of Strands	Rubber Wall 64th Inch	Approx- imate O.D. Inches	Std. Pkg. Feet	Type Package	Shipping Wt., Lbs. per 1000 Feet

## Habirshaw Lead Covered Cable

Stranded Twin Flat Conductor

Type RDL—600 Volts, N.E.C.S.

Used under the same conditions as stranded single conductor lead covered wire. Sizes range from 0000 to 14 A.W.G., stranded. Black Core rubber compound insulation on each conductor. Rubber filled tape or braid covering over insulation. Conductors grouped parallel. When specified, round cable with 2 conductors twisted will be furnished. Covering over all is lead sheath. Type letter R D L.

Size A.W.G.	No. of Strands Concentric	Thickness Insulation 64ths Inch	Thickness Lead Sheath 64ths Inch	Diameter Over Lead Inches	Approx. Ship. Wt. Lbs. per 1000 Ft.

## Habirshaw Lead Covered Cable

Type RML—600 Volts, N.E.C.S.

Used for 3-phase circuits. Stranded are used where extra flexibility is required in smaller sizes and always in larger sizes where solid conductors would make cable too stiff to handle.

Contains 3 conductors. Sizes range from 500,000 cm. to 14 A. W. G. Each conductor insulated with Black Core rubber compound. Insulation covered by rubber filled tape. Conductors twisted, filled with jute. Rubber-filled tape covering over jute. Lead sheath covering over all.

Habirshaw Solid Traffic Control Cable  
600 Volts

Habirshaw Traffic Signal Control Cables are suitable for general application in control circuits rated at 600 volts or less. For normal installations, and particularly in aerial circuits, this type of cable is constructed with an overall braid covering.

A cotton braid is normally furnished, conforming to the heavy braid requirements of A.S.T.M. Designation D27, latest revision thereof. However, if desired, a cotton loom covering can be supplied.

Habirshaw Traffic Signal Control Cables can be supplied in accordance with various specifications, however, the specification for Rubber Insulated, Heavy Braid or Loom Covered Multi-Conductor Signal Cable of the International Municipal Signal Association, Inc., is normally followed.

The individual rubber insulated conductors of Habirshaw Traffic Signal Control Cable are normally enclosed in a colored cotton braid, conforming to N.E.M.A. Standard Color Coding.

10	12	.1019	$\frac{3}{64}$	1.05	778

Conductors of stranded construction can be furnished, also cables with lead sheath.

Nos. 14 and 12 can be furnished with  $\frac{3}{64}$  inch insulation where required.

Habirshaw Signal Wire and Cable  
Association of American Railroads, Signal Division  
Standard

Railway signal wire is made to conform with the exacting specifications of the Association of American Railroads, Signal Section Standard and represents the standard engineering practice in this line.

The present Association of American Railroads, Signal Section Standard specification for rubber insulation is a development resulting from a study of the manufacture, inspection and use of rubber insulated wire extending over a period of many years, by a strong and representative committee of signal engineers who have given considerable time and attention to this subject. The specification has undergone changes in this time and every change has improved the product and confirmed the opinion of signal engineers as to the excellent quality of the insulation which it exacts. Habirshaw also makes a higher grade signal wire known as Habirite signal wire which is recommended for locations where operating conditions are exceptionally severe.

Habirshaw has specialized on A.A.R. Signal wire and makes all standard types including the following:

Rubber Insulated Signal Wire for 600 Volts or Less

Single conductor, solid or stranded.  
Range of sizes, Nos. 1/0 to 18 A.W.G.  
Insulation, A.A.R. Signal Section compound.  
Covering over insulation is one cotton braid, weatherproof saturated and finished.  
Thickness of insulation: Nos. 18 and 16 A.W.G.,  $\frac{3}{32}$  inch; Nos. 14 to 9 A.W.G.,  $\frac{5}{64}$  inch; Nos. 8 to 4 A.W.G.,  $\frac{3}{32}$  inch; and Nos. 2 to 1/0 A.W.G.,  $\frac{1}{16}$  inch.

Aerial Braided Cable, for 600 Volts or Less

Number of conductors as specified.  
Range of sizes, Nos. 1/0 to 18 A.W.G., solid or stranded.  
Insulation, A.A.R. Signal Section compound.  
Paraffined jute fillers. Has one rubber filled tape over assembly; one cotton braid weatherproof saturated and finished overall. Can be furnished lead covered if requested.  
Thickness of insulation: Nos. 18 and 16 A.W.G.,  $\frac{3}{32}$  inch; Nos. 14 to 9 A.W.G.,  $\frac{5}{64}$  inch; Nos. 8 to 4 A.W.G.,  $\frac{3}{32}$  inch; and Nos. 2 to 1/0 A.W.G.,  $\frac{1}{16}$  inch.

Habirshaw Control Cable

Station control cables are used for the remote control of outdoor or automotive substations and are installed in conduit being either braid or lead covered.

Number of conductors, as required.  
Usual size, 19 No. 22 A.W.G. or 19 No. 25 A.W.G.  
Insulation on each conductor, rubber compound of quality specified.  
Thickness of insulation each conductor,  $\frac{3}{64}$  inch, for 600-volt service unless otherwise specified.  
Covering over insulation, colored dry cotton braid.  
Grouping of conductors, cabled.  
Fillers, dry jute.  
Covering over assembly, one rubber filled tape.  
Covering overall, one weatherproof saturated cotton braid, lead rubber jacket, neoprene or nometal sheath, as specified.  
Identification of circuits may be made by ridged tracer in each layer of conductors, by color of rubber, or by colored braids on the conductors according to N.E.M.A. color code.  
Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

## Habirshaw Habirprene Sheathed Parkway Cable

Single Conductor

Two-Conductor

Three-Conductor

Habirshaw Neoprene Sheathed Parkway cables are designed for use either in ducts or buried directly in the ground.

**Insulation.** These cables are regularly furnished with Habirduet type insulation, but can be supplied with any of the standard types of insulation.

**Sheath.** A tough, abrasion resisting Habirprene sheath designed to withstand exposure to moisture, alkalies and acids and meeting the requirements of A.S.T.M. Spec. D-752.

Tough rubber sheaths can be furnished as an alternate to Neoprene.

Single Conductor Cables have no separation between insulation and sheath.

Multiple Conductor Cables have a rubber-filled tape over each conductor: jute fillers and a rubber-filled tape over the assembly under the sheath.

These cables are designed to conform to the dimensional requirements of IPCEA for rubber-sheathed cables.

When conditions are unusually severe, cables with heavier sheaths can be furnished.

Data for sizes and voltages not listed herein will be furnished upon application.

## Habirshaw Steel Tape Parkway Cable

Single-Conductor

2-Conductor—Flat

Parkway cables are used for transmission and distribution where it is preferable to bury the cables directly in the ground rather than to put them in ducts. Any kind of cable will be furnished with park cable covering, but the following types are in general use for distribution purposes.

Insulation on each conductor, Black Core rubber compound for 5000 volts or less. For higher voltage, special high voltage rubber.

Covering over insulation, rubber filled tape. Covering over tape, lead sheath.

Covering over lead sheath, asphalted jute.

Protective armor, two ungalvanized steel tapes, wound in the same direction, the outer tape covering the spaces between turns of the inner tape.

Outside covering, asphalted jute.

Parkway cables with galvanized steel tapes will be furnished when so specified.

Habirshaw Parkway Cables are made to conform to I.P.C.E.A. standards for rubber insulation and metallic coverings.

## Habitshaw Varnished Cambric Insulated Cable

Varnished Cambric Insulated Cable is used: In power stations and sub-stations for connecting machinery and apparatus of all voltages (see Apparatus Cable and Station Cable); In buildings in place of rubber insulated cable, where special reliability is desired; On vibrating structures where paper insulation cannot be used due to the crystallization of the lead sheath.

Insulation consists of varnished cambric tapes applied helically to the conductor with intervening layers of mineral base grease.

Varnished Cambric Insulated Cable is covered as follows: Apparatus cable, saturated cotton braid or varnished treated braid; Station cable, flameproof braid; Building mains, a saturated cotton braid or a rubber filled tape and one saturated cotton braid; Underground cable, lead sheath; Cable for outdoor structures, a rubber filled cotton tape, two galvanized steel tapes, and a layer of asphalted jute under and over the armor.

Upon receipt of inquiry stating conditions of service, our Engineering department will furnish additional data.

\*Recommended by the N.E.M.A.—N.E.L.A. Joint Committee on voltage standardization as "preferred voltage ratings" for general apparatus.

All cables have an operating tolerance of 5% above the rated voltage except those rated at 15,000 volts and below which have no operating tolerance. All cables for three-phase circuits are rated on the conductor to conductor basis.

Unless otherwise specified, two-conductor cable will be of the round type.

Specifications listed above are recommended by I.P.C.E.A.

## Habirshaw Trench Type Nometal Cable

### For Direct Burial in Earth

Habirshaw Nometal Cable is adapted to the following types of services:  
**POWER COMPANIES.** Low and medium tension networks, series and multiple street lighting, underground service entrances, rural underground distribution, etc.  
**RAILROADS.** Signalling, power and lighting for yards.  
**MUNICIPALITIES.** Street lighting, traffic signals.  
**AIRPORTS.** Lighting and signalling.  
**INDUSTRIAL PLANTS.** Lighting and power in yards.

The salient feature of Habirshaw Nometal Cable is that it alone of all the non-metallic trench cables has a continuous, homogeneous, non-fibrous sheath. The Habirshaw Nometal sheath is of vulcanized oil compound, a material known for half a century for water and acid-proofness, resistance to air and ozone, oxidation and decay, and general permanence.

Habirshaw Nometal Cable can be supplied with a special covering when it is desired to install it into ducts for network systems or other special service. Complete information sent on request.

Nos. 14 and 12 can be furnished with  $\frac{3}{16}$  inch insulation where required.

## Habirshaw Pole and Bracket Cable

600 Volts

This type of cable is recommended for wiring between the pole base and the lighting fixture inside an ornamental pole and between the overhead circuit and the lighting fixture on a street lighting bracket; for internal or external wiring, or for any other application requiring a two-conductor, flexible cable insulated for 600 volts and less between conductors, and for higher voltages used in series street lighting between the conductor and ground.

### Non-Belted—Two-Conductor

The construction consists of tinned copper conductors, rubber insulation, rubber filled tape or saturated braid on each conductor, the two insulated conductors laid parallel with one rubber filled tape and single cotton braid overall saturated with weatherproof compound and finish.

Application: For 600-volt service for plain conductors, and 0 to 600 volts, 2001 to 3000 volts, 3001 to 4000 volts service between conductors and ground.

### Belted—Two-Conductor

The construction consists of tinned copper conductors, rubber insulation, rubber filled tape or saturated braid on each conductor, the two insulated conductors laid parallel, rubber belt, rubber filled tape and single braid or double braid overall, saturated with weather-proof compound and finished.

Application: For 600-volt service between conductors, and 4001 to 6000 volts, 7001 to 9000 volts, and 9001 to 10,000 volts between conductors and ground.

## Habirshaw Armored Submarine Cable

Armored cable, or submarine cable, as it is sometimes called, is used under water for crossing rivers, bays and lakes.

Armored cable may be insulated with paper, varnished cambric or rubber compound. If insulated with paper or varnished cambric, a lead sheath is required. If insulated with rubber compound, a lead sheath is preferable, but may be omitted where the water, in which the cable is to be laid, does not contain injurious impurities and does not attain an unusually high temperature. If the cable is rubber insulated and not lead covered, it has a rubber filled cotton tape.

The leaded or taped core is served with jute yarn, run through hot asphalt compound, then armored with galvanized steel wires, \*run through hot asphalt compound, served with two layers of yarn and finally run through asphalt compound.

The asphalt and jute over the armor may be omitted, if desired.

Upon receipt of inquiry stating the conditions of service, our Engineering Department will furnish additional data.

\*Hot asphalt compound is also applied during armoring at the points where the armor wires come into contact, insuring complete sealing of the armor.

## Habirshaw Braided A.V.C Power Cable

Stranded Conductor  
600 Volts

Insulated with felted asbestos, varnished cambric, felted asbestos and asbestos braid.

For general power wiring, either open or in conduit where heat with limited moisture or vapor is encountered. It will maintain uninterrupted service under conditions prohibitive to ordinary insulations.

Steel mills, boiler rooms, industrial plants, refineries, power plants, soaking pits, furnaces, ovens, lehrs, tender frames, and steam tunnels present many applications for this heat and moisture-resistant cable.

Finished black with a compound that will resist heat, flame, moisture, oil and corrosive vapors.

Where exposed to excessive moisture, lead covered cables should be used.

Approved by Underwriters' Laboratories.

Available in 1000, 2000, 3000, 5000, and 8000-volt construction.

## Habirshaw Lead Sheathed A.V.C. Power Cable

Stranded Conductor  
600 Volts

Recommended for use in conduit exposed to widely varying conditions throughout its length.

It is particularly suitable for power stations located at tidewater where ducts are sometimes flooded but other parts of the same circuit are exposed to high temperature, also where condensation is especially heavy, as in ashpits where it is the practice to wet down ashes.

Lead sheathed cable is of standard A.V.C. construction, except that a lead sheath has been substituted for the asbestos braid.

The lead sheath enables this cable to stand up successfully when completely and continually submerged.

## Habirshaw All-Asbestos Power and Rheostat Cable

Stranded Conductor  
600 Volts

All-Asbestos Power and Rheostat Cable is recommended for open wiring at 600 volts or less where subjected to heat, fumes, oil, grease, or fire hazard, and in applications such as grid jumper connections, connections from grids to faceplates, switchboard wiring in hot locations, elevator and locomotive panel wiring.

Approved by the Underwriters' Laboratories.

## Phelps Dodge Slow Burning Wire and Cable

Underwriters' Approved

Solid—Triple Braid

All three braids of cotton are thoroughly saturated with white fireproof compound. The compound used on the outer braid becomes very hard, but still the wire retains its flexibility. As this insulation does not deteriorate in a continued high temperature, it is especially suitable for engine and boiler rooms, furnaces, and foundries.

## Phelps Dodge Rectangular Copper Bus Bar

P-D Rectangular Copper Bus Bars are guaranteed to have a minimum conductivity of 98%. They are manufactured by the extrusion process, instead of being drawn assuring even temper and full straight edges.

P-D bars fully comply with the latest A.S.T.M. specification, but can be manufactured to individual specification when specified.

Size Bar Inches	Cross Section Square Inches	*Carrying Capacity Amperes	Weight Pounds per Foot

3/8x4	1.500	1500	5.77

\*At current density of 1000 amperes.

Phelps Dodge Seamless Copper Bus Tubing  
Bulldog Brand

The advantages due to the inherent properties of tubular bus bars for high amperages have been a deciding factor in the increasing use of copper tubes for outdoor busses. Bulldog copper bus bar tubes have a minimum conductivity of 98%, can be bent to meet special field conditions, or flattened for terminal connections.

Uniform in temper, accurately manufactured to size by the extrusion process, Bulldog copper bus tubes lend themselves readily to clamp connectors or internal splices.

Phelps Dodge P-M-G Rigid Conduit and  
EMT Tubing

P-M-G conduit is available in both standard heavy wall rigid conduit and thin-wall electrical metallic tubing. P-M-G metal is a rustless alloy of unusually high tensile strength.

This conduit is recommended for use where severe corrosive conditions exist and is suitable for such installations as chemical plants, railroad terminals, dairy barns, textile finishing and dye plants, also installations in coastal areas or where conduit might be directly subjected to salt spray.

P-M-G conduit is fully approved by Underwriters' Laboratories and fittings of the same alloy are available from many manufacturers. Complete bulletin on request.

Percentage of the surface of the underlying core which is covered by the concentric uninsulated neutral conductor, subject to a tolerance of plus or minus 5%.

Peerless\* Type SD—150 Volts

A cable of concentric uninsulated neutral construction for use in continuous overhead connection between pole and meter, switch or service equipment. Designed for circuits not exceeding 150 volts to ground. Where used as service entrance cable, cable must be installed in conduit.

Has a weather-resisting outer covering of asphalt saturated Peerless felt in which the concentric uninsulated neutral conductor is embedded and gives added mechanical protection to the cable.

2-Conductor (Concentric)

Percentage of the surface of the underlying core which is covered by the concentric uninsulated neutral conductor, subject to a tolerance of plus or minus 5%.

### General Cable Synthetic Rubber Insulated Tree Wire

0-8000 Volts

Tree wire constructions consist of a synthetic rubber or rubber-insulated conductor having fibrous coverings or non-metallic sheath to withstand the abrasive action of tree limbs.

The use of tree wire on overhead distribution systems where heavy tree growth is encountered avoids re-routing of lines, or when alternate routes are not available, eliminates expense and other disadvantages of tree trimming.

Tree wire is made in single conductor form only, and, since it is normally installed on insulators, has lighter insulation walls than the usual standards for rubber insulated wire and cable. When tree wire is used for other purposes, and not supported on insulators, standard insulation walls should be used.

#### A.S.A. Type

Has lead alloy coated, medium hard, solid copper conductors for No. 4 A.W.G. and smaller; stranded for larger sizes.

Insulation, A.S.T.M. Performance grade synthetic rubber or rubber compound.

Tape and hawser cord braid coverings.

Saturant is of special synthetic compound (Barkhide treatment).

Pitch and mica finish.

#### \*Barkhide

An excellent tree wire, having in addition to the superior electrical properties of General Cable tree wire compound, a high degree of abrasion resistance.

Has lead-alloy coated, medium hard, solid copper conductors for No. 4 A.W.G. and smaller; stranded for larger sizes.

Insulation, General Cable tree wire compound.

Tape, Rohide fiber armor covering not less than .035 inch in thickness, and closely woven hawser cord braid.

Saturant is of special synthetic compound (Barkhide treatment).

Pitch and mica finish.

\*Trade-mark.

When installed without insulators, insulation thicknesses must be in accordance with the standards for series street lighting cables and for power cables. If the voltage exceeds 2000 volts on tree wire installed without insulators, shielding recommendations should be obtained from our nearest office.

## Stantree Tree Wire Power Cables

A loom-woven tree wire with an abrasion resistance nearly twice that of A.S.A. type. Insulation is a special tree wire compound with high dielectric strength, low dielectric constant, and excellent aging characteristics.

Conductors are tinned medium hard copper, solid for No. 4 A.W.G. and smaller, and stranded for larger sizes.

Coverings of tape and heavy loom of hard twisted paper twine and cotton cord. Special synthetic compound saturant, Barkhide treatment. Pitch and mica finish.

## General Cable Non-Metallic Underground Cable

### Style GRS—0-15,000 Volts

Similar in construction to Style PRS except that conductor insulation is Gencorone. Furnished for a variety of special applications in voltage ratings up to 15,000 volts. Principally intended for use at voltages above those permitted for Style PRS, that is, between 3000 and 15,000 volts.

Information on the construction and application of cable may be obtained on application.

### Recommended Shielding Practice for Cable

Shielding is recommended where the 3-phase (line to line) operating voltage exceeds the following values:

	Single Conductor Cable Volts	Multi-Conductor Cable Volts
(1) If protected against accidental direct contact by persons:		
(a) Duct or Direct Earth Installation:		
Neutral Grounded.....	†5000	†3000
Neutral Ungrounded.....	†3000	†3000
(b) Direct Connection to Overhead Lines...	†2000	†2000
(2) Not Protected Against Accidental Direct Contact by Persons.....	2000	2000

\*Trade-mark.

†All non-metallic cables operated above 2000 volts should be shielded, except those which fulfill the three conditions—(1) not connected to overhead lines which are exposed to lightning; (2) completely buried directly in earth; (3) fully protected against accidental contact.

‡If connected to overhead lines exposed to lightning, shielding is advisable regardless of the operating voltage.

## General Cable Non-Metallic Underground Cable

### 0-15,000 Volts

Synthetic rubber or rubber insulated nonmetallic cable of Neoprene jacketed type. For non-portable uses, such as in underground ducts or direct installation in the ground.

Neoprene jacket has high resistance to deterioration from moisture, earth acids, alkalies, or other earth chemicals, and in cinder fills, railway ballast, and other locations having a distinctly acid character. Also used in mines, for underground distribution for both primary and secondary, for secondary alternating current networks, for underground service entrances, and for many general purposes where light weight and high corrosion resistance is desired.

### Style PRS—0-3000 Volts

Includes single and multi-conductor cable.

**Single Conductor** cable which does not require shielding has insulation and jacket firmly bonded together. May include a separating tape between the insulation and jacket. Shielded single conductor cable has a separating tape and shielding tape between insulation and jacket.

**Multiple Conductor** cable has a tape over each insulated conductor, copper shielding tapes when required, fillers where necessary to round out the construction and a tough Supersheath jacket overall.

Conductor insulation is a moisture-resisting Performance Grade compound in accordance with A.S.T.M. Specification D755 latest issue, of the thickness specified.

The Neoprene jacket conforms to A.S.T.M. Specification D752, latest issue.

## General Cable Series Street Lighting Underground Cable

### 0-10,000 Volts

For underground installation either in ducts or directly in the earth. Supplied in a variety of types. Usual sizes are 8 and 6 A.W.G.; other sizes furnished if required.

Conductors for all types are lead-alloy coated soft or annealed copper, usually solid, and comply with all requirements of A.S.T.M. Specification B189, latest issue.

### Lead Sheathed Parkway Cable

Insulated with Gencorone to standard thickness; enclosed in lead sheath over which protective coverings may be applied.

Dimensions and weights are given for the following:

- (1) Lead sheath with no additional covering, for use in ducts and conduit.
- (2) Lead sheath with one or two servings of jute overall, for direct earth installation. As an alternate to the jute covering, duck tape can be supplied.
- (3) Lead sheath with jute, double flat steel tape armor, and jute overall for direct earth installation. This type should not be used when current exceeds 12 amperes.

Construction data for cables of other sizes and voltage ratings will be supplied on request.

**General Cable Series Street Lighting  
Underground Cable**  
0-10,000 Volts  
**Non-Metallic Sheathed Type Cable**

Non-Metallic series street lighting cable is insulated to the standard thickness required for the operating voltage, in accordance with table on preceding page. Shielding tapes are required when the maximum open circuit voltage will exceed 6000 volts. A Neoprene jacket is applied overall. This cable may be used in ducts or installed directly in earth.

**Concentric Type Cable**

Concentric types for series street lighting cable have an inner insulated conductor and an outer uninsulated conductor, the latter serving as a shield.

These types are designed primarily for power circuits but are well suited to series street lighting use where a non-leaded cable is required. Description of this cable will be found under Concentric Trenchlay.

**Gencorone Type Cable**

Non-leaded series street lighting cable having Gencorone insulation is supplied either for duct installation or for direct earth installation. Gencorone insulation is suitable for this type of service because of its high dielectric strength and corona resistance. Gencorone can be supplied with Ruralay cable or in the following forms:

**FOR DUCT INSTALLATION.** Conductors insulated with Gencorone, covered with Gencorone tape, and enclosed in heavy braid. When the maximum open circuit voltage exceeds 6000 volts, shielding is recommended.

**FOR DIRECT EARTH INSTALLATION.** Conductors insulated with Gencorone, covered with Gencorone tape, jute bedding, double steel tape armor, and jute serving overall.

**General Cable Synthetic Rubber or Rubber  
Insulated Ornamental Pole and Bracket  
Cable**  
0-10,000 Volts

Used for interior wiring of ornamental poles which are fed by underground cable, or for the exterior wiring of pole type bracket fixtures.

Standard pkg., 1000 feet on reel unless otherwise ordered.

**Twin Type**

Two insulated and braided conductors laid parallel and enclosed in overall tape and braid. Saturated and filled with weatherproof compound and coated with special arc cable finishing compound.

**Twin Belted Type**

Two insulated and braided conductors laid parallel, enclosed in a close fitting belt of insulating compound and covered with an overall tape and braid. The overall braid is saturated and filled with weatherproof compound and coated with special arc cable finishing compound.

The maximum permissible voltage between conductors is 600 volts.

†If used as a service entrance cable within the jurisdiction of the National Board of Fire Underwriters the maximum voltage to ground is 150 volts.

# General Cable \*Ruralay Non-metallic Underground Cable

## 2001-8000 Volts

For underground installation in rural areas where the distribution problem is characterized by long cable runs, scattered service connections, and relatively few customers per mile. Especially adaptable for installation by the use of a cable plow. No additional protection of cable is required except at highway crossings and points of unusual mechanical hazard. Under dirt highways creosoted wood planking affords adequate protection.

Construction data for cables of other sizes, types, and voltage ratings will be supplied on request.

## General Cable \*Trenchlay Synthetic Rubber or Rubber Insulated Control Cable

600 Volts

Designed for direct earth installation. The non-metallic armoring is of the fibrous type which has been used on Trenchlay cable for many years. This sheath results in a lightweight cable which is easy to splice and to terminate, and which is free from trouble due to electrolysis.

Conductors are insulated with 3/64-inch Trenchlay compound which is highly resistant to water and earth solutions.

A color-coded cotton braid is applied on each conductor.

The taped assembly is provided with a moisture seal of asbestos base caulk, a heavy saturated asbestos braid, a second layer of caulk, pretreated fibrous armor tape, a third layer of caulk, and a heavy presaturated duck tape.

Cable is finished with pitch and mica to provide a non-tacky surface.

A variation in the regular Trenchlay underground finish can be supplied when a control cable is desired for underground, aerial, and duct (universal) service.

Shipped on reels containing 1000 feet.

## General Cable Synthetic Rubber or Rubber Insulated Traffic Control or Signal Cable

600 Volts

Braid Finished

Lead Sheathed

Suitable for general application in control circuits rated at 600 volts or less.

**BRAID FINISHED.** Recommended for general application, particularly in aerial circuits, and for inside use in conduit where not subject to immersion.

**LEAD SHEATHED.** Recommended for service in underground ducts or in locations where cable is subject to either continuous or intermittent immersion in water.

Standard conductors are solid, lead-alloy coated copper, insulated with  $\frac{3}{4}$ -inch N.E.C. insulation covered with I.P.C.E.A. color-coded braids.

Standard I.P.C.E.A. Parkway cable finish can be supplied over the lead sheath on cables to be used for direct earth installation.

Shipped on reels containing 1000 feet.

## General Cable Fire Alarm, Police Signal, And Municipal Signal Cable

600 Volts

For general service in fire alarm, police signal, and other municipal signal systems.

Constructed with many combinations of conductors and pairs. Designed with suitable overall coverings for underground, aerial, or inside use.

May be made to conform to various specifications, but the Specifications and Operating Standards of the International Municipal Signal Association, Inc. are most generally accepted and followed unless otherwise specified.

This cable is standard in the following forms:

(1) Lead sheathed multiple conductor signal cable for general use in underground ducts, aerial use with messenger or in stations and buildings.

(2) Lead sheathed and armored multiple conductor Parkway signal cable for general use installed directly in the earth without conduit protection.

(3) Heavy braid or loom covered multiple conductor signal cable for aerial use with messenger or for conduit and duct installations.

(4) Neoprene jacketed multiple conductor signal cable for use in underground ducts or for aerial use with messenger.

### Variable Construction Features

**CONDUCTORS.** All conductors are lead-alloy coated conductors in accordance with A.S.T.M. Specification B189, latest issue.

**INSULATION.** The insulation is high grade, long life synthetic rubber or rubber compound. Thicknesses of insulation are standard for operation at 600 volts or less. Natural rubber Superlite insulation can be supplied when a small diameter cable is desired.

**BRAIDS.** Saturated braids, either color-coded or plain, will be furnished on the individual conductors.

**ASSEMBLY.** Multiple conductor assemblies are laid up symmetrically in layers in round form, jute fillers being used where necessary. Tracer conductors are included in each layer for identification purposes. A tape is applied over the core.

**LEAD SHEATH.** The sheath of non-armored cable for installation in ducts, and of armored cable is commercially pure lead. The sheath of non-armored cable for aerial use is copper bearing lead or is a lead-antimony alloy containing  $\frac{3}{4}$  per cent antimony.

Letters preceeding the number of strands refer to A.S.-T.M. class designation in B 8-41.

Also furnished in alternate strandings.

Breaking strengths are based on nominal wire diameters.

Resistances: Based on nominal wire diameters. Resistivity at 68°F. (20°C.)—875.2 ohms (mile, pound)—100 per cent I.A.C.S. Conductivity. Increments for stranding:

2,000,000 CM and Less.....	2 Per Cent
Over 2,000,000 CM Including 3,000,000 CM..	3 Per Cent
Over 3,000,000 CM Including 4,000,000 CM..	4 Per Cent
Over 4,000,000 CM Including 5,000,000 CM..	5 Per Cent

Weights are based on nominal wire diameters with same percentage increment for stranding as used for calculation of resistances.

Tolerances conform to tolerances in wire diameters. Total area of conductor shall be not less than 98 per cent of the nominal listed area.

The above data is approximate and subject to normal manufacturing tolerances.

Letters preceeding the number of strands refer to A.S.-T.M. class designation in B 8-41.

Also furnished in alternate strandings.

Breaking strengths are based on nominal wire diameters.

Resistances: Based on nominal wire diameters. Resistivity at 68°F. (20°C.)—875.2 ohms (mile, pound)—100 per cent I.A.C.S. conductivity. Increment for stranding, 2 per cent.

Weights are based on nominal wire diameters. Increment for stranding, 2 per cent.

Tolerances conform to tolerances in wire diameters. Total area of conductor shall be not less than 98 per cent of the nominal listed area.

The above data is approximate and subject to normal manufacturing tolerances.

# General Cable Tinned or Lead Alloy Coated Solid Wire Soft or Annealed Copper

Tinned copper wire and cable can be furnished, either soft annealed or hard drawn, in strandings as well as in solid conductor form. The solid conductor form is normally limited to No. 1 A.W.G. and smaller sizes. Tinned soft or annealed wires are manufactured in accordance with all requirements of A.S.T.M. Spec. B33.

The more commonly used tinned wires and cables are shown in the following table.

Special lead alloy, in place of tin, is used in numerous applications where desirable and can be supplied when required.

Breaking strengths: Maximum values for nominal diameters based upon tensile strength limits of A.S.T.M. Spec. B33.

Resistances: Maximum values for nominal diameters based upon resistivity limits of A.S.T.M. Spec. B33.

Weights: Nominal values for estimating purposes only and subject to normal variations in manufacture.

# General Cable Concentric Stranded Cable Bare and Tinned Copper—Soft or Annealed Medium Hard and Hard Drawn

CLASS AA. Used for bare cable.

CLASS A. For weather-resistant (weatherproof), slow burning and slow-burning weather-resistant cable, and for bare cable where greater flexibility than is afforded by Class AA is required.

CLASS B. For cable insulated with various materials such as rubber, paper, varnished cloth, etc., and for the cable indicated under Class A where greater flexibility is required.

CLASS C and CLASS D. For cable where greater flexibility is required than is provided by Class B cable.

†Optional construction for No. 4/0 A.W.G. size in Class AA and Class A is 12 wires of 132.8 mils diameter.

§Optional construction for No. 3/0 A.W.G. size in Class AA and Class A is 12 wires of 118.3 mils diameter.

||Optional construction for 600,000 c.m. size in Class B is 37 wires of 127.3 mils diameter.

¶Optional construction for 550,000 c.m. size in Class B is 37 wires of 121.9 mils diameter.

## General Cable Copper Trolley Wire

In the manufacture of this wire special care is taken in rolling and drawing to obtain a surface free from imperfections and wire continually true in shape. This produces a contact wire giving maximum life and freedom from operating trouble.

## Round and Grooved

## Figure 8 and Figure 9 (Deep Section)

Manufactured in accordance with American Society for Testing Materials, Specification B47 and American Transit Engineering Association Specification D2. Specifications were prepared jointly by the two associations in collaboration with Association of American Railroads and are identical.

Manufactured in accordance with American Society for Testing Materials Specification B116.

Figure 9 furnished primarily for industrial use.

## General Cable Overhead Line Conductors

## Bare Copper—Hard Drawn and Medium Hard Drawn

General Cable supplies a complete series of bare overhead line conductors to cover the entire range of electrical and physical requirements necessary for all forms of transmission or distribution system design for power, communication, and signal circuits.

Copper conductors provide a useful combination of electrical and physical properties not possessed by any other commercial metal.

**Important advantages are:**  
**High Electrical Conductivity.** Copper has the highest electrical conductivity of all commercial metals which results in the smallest conductor diameter and therefore the lowest transverse stressing of supporting structures in most applications.

**Low Cost.** The low cost of copper makes it a particularly economical conductor.

**Strength.** Hard drawn copper possesses the strength of mild steel. Other tempers provide a wide range of tensile strengths, as required for different applications. A correct adjustment between required strength and necessary flexibility, of particular importance in larger conductor sizes, is therefore always possible with standard copper conductor constructions.

**Hardness.** The hardness and abrasion resistance of copper insure freedom from conductor injury during construction and operation.

**Fatigue Resistance.** Considering vibration troubles of certain types of overhead line conductors, copper has maintained an enviable record of practical freedom from injury due to vibration.

Copper conductors can be assembled by any method available to other conductor types. Special assemblies, such as 3-wire strand, are therefore available to reduce the possibility of vibration under particularly severe operating conditions.

**Permanence.** The exceedingly high resistance of copper to corrosion results in a greater freedom from deterioration, both electrically and mechanically.

**Reliability and Ease of Splicing.** The physical characteristics and corrosion-resisting properties of copper conductors make possible easy and efficient splicing in the field and eliminate the use of special clamps and tools.

**Resistance to Flashover.** The relatively higher melting point and electrical conductivity of copper conductors safeguard them to a remarkable degree from the injurious effects of arcs or flashovers.

**Re-use.** The characteristics which make copper the outstanding metal for line conductors also make practical its re-use when desirable.

**Salvage Value.** Based upon sound economic principles, copper possesses an extraordinarily high salvage value.

ordinarily high salvage value.

**Dependability.** The uniformly satisfactory experience from a tremendous aggregate line mileage over a period of many years is eloquent evidence of the dependability of copper line conductors.

For those applications requiring tensile strengths beyond the limits of copper conductors, constructions using either copper bearing alloys or copper clad steel conductors are available.

Basis for strength, weight, and resistance data:

Hard drawn conductors—A.S.T.M. Specifications B 1 and B 8.

Medium hard drawn conductors—A.S.T.M. Specifications B 2 and B 8.

Increments for stranded conductors (weight and resistance data): 3-wire strand—1%. 7-wire to 37-wire strand inclusive—2%.

The average resistivity of copper ordinarily furnished is somewhat lower than A.S.T.M. maximums.

When lengths are not specified, random lengths will be included. When lengths are specifically agreed upon for any item, 90 per cent of the reels shall have the specified length subject to a variation of 10% plus or minus; the remainder of the item may be shipped in random lengths of not less than 50% of the specified length.

\*This size groove wire not included in A.S.T.M. B-47.

†For Figure 8 and Figure 9 wire dimensions given are nominal height of entire section and width of lower lobe.

Size 6/0 A.W.G. (336,200 CM) grooved or Figure 8 will regularly be furnished in 350,000 CM.

Tolerances: Round Wire—Diameter  $\pm 1$  per cent.

Grooved Wire—Dimensions—Area  $\pm 4$  per cent.

Figure 8 Wire—Dimensions.

Figure 9 Wire—Area  $\pm 5$  per cent.

Breaking strengths are based on nominal wire diameters and dimensions.

Resistances are based on nominal wire diameters and dimensions and on the following resistivity: 900.77 ohms (mile, pound) at 68°F. (20°C.)—97.16 per cent I.A.C.S. conductivity.

Weights are based on nominal wire diameters and dimensions.

The above data is approximate and subject to normal manufacturing tolerances.

## General Cable Bare Copper Wire

\*Size 18 A.W.G. and smaller on spools.

Weights are based on nominal wire diameters. Breaking strengths are based on nominal wire diameters.

## Tolerances

Diameter: Hard drawn A.S.T.M. B 1.

Medium hard drawn A.S.T.M. B 2.

Wires .100-inch diameter and larger.....  $\pm 1$  per cent.Wires under .100-inch diameter.....  $\pm .001$ -inch.

No A.S.T.M. requirements for hard or medium hard wire for wires smaller than size 18 A.W.G. (.0403-inch).

Soft or annealed A.S.T.M. B 3.

Wires .010-inch diameter and larger.....  $\pm 1$  per cent.Wires under .010-inch diameter.....  $\pm .001$ -inch.

Weight: Tolerances in weight conform to tolerances in diameter (area).

The Above data is approximate and subject to normal manufacturing tolerances.

## General Cable Square and Rectangular Copper Wire

Soft or Annealed, Bare (A.S.T.M. Specification B48)

Used in the construction of transformers and other electrical machinery. Made by processing, round wire. Finished with round corners. Physical characteristics are controlled to provide sections suitable for edgewise bending. Fabricated wire is subjected to special final polishing and cleaning.

### Tensile Properties

Specified Thickness Inches	Tensile Strength Max. per Sq. In.	Elongation in 10 In. Minimum Per Cent

0.300 to 0.101....	1 Per Cent But Not to Exceed 0.016 In.	0.003 In.	1 Per Cent
0.100 and Under..	1 Per Cent But Not to Exceed 0.016 In.	0.003 In.	1 Per Cent

### Radius of Corners

Specified Thickness Inches	Specified Width, INCHES		
	0.751 and Over	0.189 to 0.750 Incl.	Up to 0.188 Incl.
0.689 and Over	3/16	3/16	..
0.688 to 0.439 Incl.	1/8	3/32	..
0.438 to 0.266 Incl.	3/32	1/16	..
0.225 to 0.166 Incl.	1/16	3/64	3/64
0.165 to 0.126 Incl.	1/16	1/32	1/32
0.125 to 0.073 Incl.	1/16	1/32	1/64
*0.072 to 0.051 Incl.	†Rounded Edge	†Rounded Edge	1/64
0.050 and Under	†Rounded Edge	†Rounded Edge	†Rounded Edge

\*Square wire, 0.072 inches and under, shall have a corner radius of 0.012 inches  $\pm$  25 per cent.

†A rounded edge is an edge produced by rolling round wire to the size specified either with or without edging rolls.

### Density

For the purpose of calculating weights, cross-sections, etc., the density of the copper shall be taken as 8.89g. per cubic cm. (0.32117 pounds per cubic inch) at 20°C. (68°F.).

### Resistivity (Percentage Conductivity)

Resistivity is used in place of percentage conductivity. The value of 0.15328-ohm (meter, gram) at 20°C. (68°F.) is the international standard for the resistivity of annealed copper equal to 100 per cent conductivity. This term means that a wire 1 mile in length and weighing 1 gram would have a resistance of 0.15328-ohm. This is equivalent to a resistivity value of 875.20 Ohms (mile, pound), which signifies the resistance of a wire 1 mile in length weighing 1 pound. It is also equivalent, for example, to 1.7241 microhms per centimeter of length of a bar 1 square centimeter in cross-section. Conductivity at 20°C. (68°F.), Per Cent.... 100.00

Ohms (Mile, Pound).....	875.20
Ohm (Meter, Gram).....	0.15328
Ohms (Mil, Foot).....	10.371
Ohm (Meter, Square Millimeter).....	0.017241
Microhm—Inch.....	0.67879
Microhm—Centimeter.....	1.7241

## General Cable Bare Cable Composite Copper-Bronze

Composite cables unite the electrical conductance of copper with the mechanical strength of bronze. For rural lines and special constructions such as river crossings, etc., and long span construction or other service conditions.

Other sizes and constructions are available.

## General Cable Alectral Weatherproof Service Wire

### Hard-Drawn Aluminum Conductors Gencaprene Type

A homogeneous, seamless covering made of Neoprene. Provides a Thermosetting, completely vulcanized covering that will not drip or become brittle under extreme weather conditions.

### U.R.C. Type

OK Braided Type conforms to A.S.A. and U.R.C. specifications.

Peerless Type is a weatherproof wire having the same weight covering as triple braided wire and characteristics providing exceptional length of life. Covering conforms to A.S.A. and U.R.C. specifications.

Sizes 12 and 14 A.W.G. are supplied in 100-pound bundles of four coils each, weighing approximately 25 pounds. Sizes 8, 9 and 10 A.W.G. may also be supplied in bundles.

## General Cable \*Super Service S Cable

Single Conductor—600 Volts

Designed for general portable power supply service whenever a heavy duty flexible cable is required. Specific uses, especially in the smaller conductor sizes, are for gathering reel locomotives in mines. For motor lead use, this cable can be supplied with a paper separator over the conductor.

\*Trade-mark.

Sizes 4, 3, and 2 A.W.G. single-conductor cable are made with a spider web braid of heavy single end cotton between inner insulating rubber and outer jacket to serve the special requirements of cables used on gathering reel locomotives in coal mines. All other sizes have helical winds.

## General Cable \*Super Service S Welding Cable

This cable possesses an overall protective jacket of tough resilient Neoprene compound especially designed to withstand severe service and yet remain flexible.

Exceptional flexibility is obtained by the use of a large number of extremely fine bare copper wires, rope stranded.

Coils easily, lies flat, does not kink or tangle. May be dragged through puddles and subjected to all kinds of hard usage in damp places.

\*Trade-mark.

The above values for carrying capacity are based on a copper temperature of 60°C. and an ambient temperature of 40°C. and yield load factors of from approximately 32% for 2 A.W.G. cable to approximately 23% for 3 A.W.G. cable, and higher for the smaller sizes. The sizes of cable used range from 2 to 3/0 A.W.G. In actual service the load factor may be much higher without overheating the cable as the ambient temperature will generally be substantially lower than 40°C.

## General Cable \*Super Service S Grounding Cable

Extensively used for temporary grounding of transmission lines of all voltages to 132,000 volts.

Ground clamp with cable attached is hooked on the line by means of a grounding stick, the other end having previously been connected to ground by clamping to transmission tower or when working on a pole, to any temporary ground connection available. This cable is also used in generating stations and substations for grounding apparatus during repairs.

## General Cable \*Super Service S Mining Machine Cable

### 2-Conductor Concentric Type—600 Volts

Used almost exclusively in mines on cutting machines and locomotives and are designed to have maximum flexibility for this type of cable. Manufactured in sizes 6 to 4/0 A.W.G. inclusive.

The central conductor is insulated with Performance Grade synthetic rubber or rubber compound over which is applied a compound filled tape. Concentric wires, having a conductivity equal to the central conductor, are laid helically, to provide full coverage over the insulated and taped inner conductor. The core thus formed is then covered with a layer of Performance Grade synthetic rubber or rubber compound which adheres strongly to the concentric strands. There is then applied a spider web braid of heavy single end cotton, and finally a heavy Neoprene jacket overall.

Size A.W.G.	CONDUCTORS		Diam. In.	Current Carrying Capacity Amperes	Insulation Thickness Inches	Overall Diameter Inches
	Construction					
6	6x7 / .0250"		.214	50	$\frac{5}{64}$	.77
6	6x19 / .0152"		.216	50	$\frac{5}{64}$	.77
4	6x7 / .0315"		.284	65	$\frac{5}{64}$	.84
4	6x19 / .0191"		.287	65	$\frac{5}{64}$	.84
3	6x7 / .0354"		.319	75	$\frac{5}{64}$	.89
3	6x19 / .0215"		.322	75	$\frac{5}{64}$	.89
2	6x19 / .0241"		.362	90	$\frac{5}{64}$	.94
2	6x37 / .0173"		.363	90	$\frac{5}{64}$	.94
1	6x19 / .0271"		.406	100	$\frac{5}{64}$	1.05
1	6x37 / .0194"		.408	100	$\frac{5}{64}$	1.05

The concentric conductor construction has a resistance no greater than that of the inner conductor.

Cables of larger sizes, up to and including 4/0 A.W.G. can also be furnished.

### 2-Conductor Parallel Duplex Type—600 Volts

Used in mines on cutting machines as a battery charging cable, and for other general uses requiring a 2 conductor all-rubber cable. Insulated with Performance Grade synthetic rubber or rubber compound. Identified by black insulation on one conductor and white insulation on the other. Conductors are laid parallel with rubber-like fillers in lateral interstices, and covered with a Neoprene sheath. A strong reinforcing cord directly under the sheath strengthens the cable and opposes kinking.

Cables of larger sizes, up to and including 4/0 A.W.G. can also be furnished.

\*Trade-mark.

## General Cable \*Super Service S Cable

### 2-Conductor Round Type—600 Volts

### 3-Conductor—600 Volts

Used for general power supply purposes for motors and various types of portable equipment.

Type G cable is furnished with ground wires.

Type W cable is furnished without ground wires.

## General Cable \*Super Service S High-voltage Cable

SUPER SERVICE S high-voltage portable power cables are designed for a wide variety of purposes. In general their use covers both transmission of power from the supply to the portable equipment and distribution of that power to the electrical machines or control devices which are installed in or on the equipment.

The principal use of SUPER SERVICE S portable power cables is to convey energy for electrically operated shovels, dredges, cranes, etc., where arduous service and safety must combine for uninterrupted production and long cable life.

Further use of SUPER SERVICE S high-voltage cables of this type is found wherever both high voltage and portability are required, such as in construction work and for temporary or emergency power transfer in central stations and substations during equipment repairs and alterations. SUPER SERVICE S cables are available for operating voltages up to and including 15,000 volts, in single and multi-conductor form, and in a wide range of conductor sizes.

When unusual service conditions are encountered it is highly desirable that all requirements be known before attempting to select the proper type of SUPER SERVICE S cable to use. General Cable engineers are prepared to submit recommendations and to furnish full information on modifications.

There are three general types of SUPER SERVICE S high-voltage cables. These are:

TYPE W, without ground wires.

TYPE G, with ground wires.

TYPE SH (shielded) with or without ground wires.

### Type W—(Without Ground Wires)

This cable is not recommended for service exceeding 2500 volts, although it can be furnished for higher voltages. Even at 2500 volts, special precautions should be used in the handling of the cable to minimize hazard of shock to workmen.

Has heavy walls of insulation and jacket.

### Type G—(With Ground Wires)

The same construction as Type W except that it has a flexible ground wire in each filler space. While cables operating above 2500 volts should preferably be shielded, the ground wires in Type G cables in effect provide some shielding and afford a certain degree of protection to operators when the wires are grounded at both ends of the cable length. In some instances Type G cables have proved satisfactory at 4500 volts. The ground wires are normally of tinned copper strands covered with a cushioning cotton braid. If desired, ground wires composed of tinned steel strands can be supplied in place of copper.

### Type SH—(Shielded—With or Without Ground Wires)

Similar to Types W and G, as previously described, except for the addition of shielding braids, and are recommended for all operating voltages above 2500 volts. These cables are classified in four groups as follows:

Type	Ground Wires	Shielding
SH-A	Without	On Each Conductor
SH-B	Without	Over Cabled Conductors
SH-C	With	Over Cabled Conductors
SH-D	With	On Each Conductor

Shielding braids over the assembled conductors confine the voltage stress within the core of the cable. When applied over the separate conductors, shielding confines the stress to the individual conductor insulations, eliminating corona and the attendant formation of ozone which is deleterious to synthetic rubber or rubber. Shielding braids, properly grounded, afford protection to the cable and to the operator.

The preferred shield consists of a combination copper-cotton braid with the tinned copper wires running in a direction opposite to the lay of the cable, and the cotton threads running in the same direction as the lay of the cable. An all-copper shielding braid can be furnished if desired but the combination shield has been found to give better service in cables subjected to repeated flexing.

It is considered good practice to employ ground wires in all shielded high-voltage portable cables. These ground wires are normally uninsulated to permit electrical contact with the shielding braids.

Where maximum safety is desired, Type SH-D cable with grounding conductors are recommended for circuit voltages over 2000.

\*Trade-mark.

\*Trade-mark.

Four conductor type SH cables also supplied

## General Cable Wire Armored Cable

## 3-Conductor

For semi-portable use, such as power supply to dredges. Galvanized steel armor wire provides longitudinal strength, allowing long lengths to be pulled into position or moved about without imposing undue strain on conductors or insulation. Protection is also afforded against fouling by ship anchors, abrasion, and impact of heavy bodies.

Conductors are of lead-alloy coated, soft annealed copper, and are flexible stranded (A.S.T.M. Class C).

Insulation on conductors is either a synthetic-rubber or rubber compound enclosed in a compound filled and varnish cambric tapes. Compound filled tape is color coded for circuit identification. Insulated and taped conductors are cabled with a short lay with presaturated jute fillers, and bound together with a heavy compound filled tape. A bedding of presaturated jute yarn is next applied, over which the galvanized steel armor wires are served. Armor wires are applied tightly with a short lay to provide maximum flexibility in finished cable.

## Rated Voltage, 2001-3000 Phase to Phase

## Type S General Cable Cords

### 600 Volts

Approved by Underwriters' Laboratories, Inc.

Used as portable supply lines to small electric tools or machinery. Prescribed by the N.E.C. for use in damp places and where subject to extra hard usage.

Made of flexible or extra flexible stranded conductors of soft, annealed copper, fibrous separator, synthetic-rubber insulation (color coded), cabled with cushioning soft jute or cotton fillers, a fibrous separator and enclosed in a synthetic rubber jacket. Put up in 250-foot lengths.

## General Cable Gencaseal\*

Gencaseal is an electrical insulation made from a synthetic thermoplastic material. The physical properties of Gencaseal are comparable to those of rubber compounds; dielectric strength is higher. Gencaseal is highly resistant to the deteriorating effects of heat, oxidation, sunlight, oil, acids and alkalis, water, and other chemical solutions; will not support combustion. Overall protection such as a tape, braid or lead sheath is not required.

Principal characteristics are:

1. Dielectric strength substantially above that of rubber compounds.

2. Resistance to oils and chemical solutions beyond comparison with rubber or most rubber-like insulations.

3. Ages more slowly than rubber because of its greater resistance to oxidation and light.

4. Flame-resistant to the extent that it will not support combustion even in open flame.

5. Tough, flexible, and durable; needs no protective coverings except where subjected to severe mechanical abuse.

6. Attractive finish; a clean, glossy, enamel-like appearance. Available in a number of bright, permanent colors.

7. Small diameter and reduced weight compared to other types of insulation which require protective coverings.

8. Strips easily from the conductor leaving the tin clean and bright.

Gencaseal insulated wire is recommended for station and industrial switchboard, meter and control wiring; for machine shop and printing press motor leads and control circuits; for distributing frame and other small wiring in the telephone plant; for appliance wiring or other small applications at 600 volts or less and where the operating temperature does not exceed 80°C.

The Underwriters' Laboratories have no fixed standards covering this type of wire for any particular application. However, their "Appliance Wiring Material" procedure provides for the listing and labeling of the wire after a sample appliance, motor or machine with suitable wiring as a component part has been submitted by the appliance maker to the Underwriters' Laboratories and approval given.

For low voltage wiring problems where severe conditions are encountered, Gencaseal may be the solution. However, it should be employed only on the recommendation of engineers who are familiar with its characteristics performance.

In solid, flexible, or extra flexible stranding. Sizes smaller than 14 A.W.G. rated at 300 volts. Insulation thickness is the same as the standard rubber wall for the size involved. Other sizes and wall thicknesses on request.

Standard colors: black, white, red, yellow, green, and blue. Unless otherwise specified, black will be supplied. Ridged insulation can be supplied for further identification where required.

All conductors soft tinned copper. Protective tapes or braids are not required.

Other strandings for flexible and extra flexible conductors can be supplied when quantity justifies.

\*Weights and diameters are for cables with tape and braid;  
other braided cables have single braid only.

Dimensions and weights are approximate and subject to  
normal manufacturing tolerances.

All conductors untinned, soft annealed copper (also sup-  
plied with tin or alternate lead alloy coated strands).

Construction data for cables of other sizes, types, and  
voltage ratings will be supplied on request.

## General Cable Bus Drop Cable

Designed for transmitting power in factories where a flexible and extensible connecting circuit is desired between an overhead open or enclosed fixed bus and the electrical motors running machinery such as lathes or punch presses. Where equipment is likely to be shifted from one position to a nearby location on the floor, this method of installation is particularly advantageous.

Stranded conductors for flexibility. Gencaseal or Underwriters' Type R insulation. Conductors color-coded for easy identification. Uninsulated conductor for grounding frame of machine. Impervious Gencaseal sheath or a tough heavy loom-woven covering with flame and moisture-resisting finish overall for mechanical protection.

### Types of Bus Drop Cable

**Type TG** has three Gencaseal insulated conductors and one uninsulated conductor of the same size used to ground the frame of the machine. The popular sizes range from 14 to 1/0 A.W.G. and are stranded in accordance with A.S.T.M. B-8 for Class B stranding. The insulated conductors meet the requirements of Underwriters' Laboratories Standard for Type T wire and are color-coded black, white and red unless otherwise specified. The three insulated conductors are cabled with the uninsulated grounding conductor. Fillers are used to round out and make a firm core and the assembled conductors are enclosed in a tape and an impervious Gencaseal sheath.

**Type TM** is identical to Type TG as far as individual conductors are concerned but the overall covering, in place of the Gencaseal sheath, is a heavy cotton loom covering having a flame and moisture-resisting finish.

**Type RM** is furnished with rubber or synthetic rubber insulated conductors in accordance with Underwriters' Standard for Type R wire. The individual conductors are covered with color-coded Guardian braids and the assembled conductors with the grounding conductor are enclosed in a heavy cotton loom covering having a flame and moisture-resisting finish.

**Table of Diameters and Weights**  
For Circuits Not Exceeding 600 Volts

### Installation

Bus drop cable is connected to the overhead bus at one end and usually to a push-button control box mounted on or near the motor or machine at the other end. A loop of several turns provides the desired reserve length for the circuit between the bus and control box. This loop makes it unnecessary to cut or splice the cable when the machine is moved and is ordinarily held

in place near the bus end of the circuit. The cable is connected to the overhead bus through standard fittings in an outlet box and may be suspended by a cable grip.

## Appleton Cable Clamps

Schedule CFS

For Exposed Industrial Wiring

Quarter-Bend  
Cable Clamp

Connector

Mooring  
Cable Clamp

Used in making branch feeder installations from the main distribution system without the use of rigid conduit (heavy-wall).

The flexibility of arrangement and mounting is especially desirable for mass machinery installations.

The quarter-bend cable clamp provides the proper bending radius without injury to the cable.

The mooring clamp is used to anchor cable at supply and output ends without due strain on cable line.

Made from unbreakable malleable iron.

## Triangle Triex Non-Metallic Sheathed Cable

Without Ground Wire

With Ground Wire

Designed for residence and small buildings.

Made of tinned copper conductors, solid or stranded, with 1946 Code Grade Insulation and fibrous covering.

Triex is also made with thermo-plastic insulated conductors over which is wound a multi-folded Kraft paper tape. The conductors are then laid together with jute fillers, enclosed in a folded paper wrap over which is applied an extra heavy cotton braid jacket, thoroughly impregnated in moisture-resisting and flame-retarding compounds, and is given a slick finish.

Available with or without ground wire.

Also available in rubber insulations to meet federal specification JC-106a.

Conforms to REA specifications.

### Triangle Double Bushed Armored Cable With Hot-Dip Galvanized Armor

Licenser

PATENTED U.S. PAT. NO. 1,940,225

Approved by Underwriters' Laboratories, Inc.

Conductors are individually insulated, twisted, provided with a fibrous covering impregnated with flame-retarding and moisture-resisting compound, and are enclosed in a continuous sheath of cross-inkled heavy, waterproofed Kraft paper of high dielectric strength.

## National Ovalflex A.B.C. Flat Armored Bushed Cable

A safely bushed and insulated flat armored cable for underplaster installations and alterations. Its neat appearance recommends it for exposed surface wiring. Easy bending, edgewise or flatwise, makes it suitable for fitting snugly into corners and around machinery.

Anti-short dependable bushes cut end of steel armor, preventing damage to wires. Regularly made with solid conductors and N.E.C. insulation, but can be furnished with stranded conductors or special insulation.

## National A.B.C. Armored Bushed Cable

National A.B.C. Cable with Anti-Short bushing has a moisture-proofed wrapping of Kraft over conductors. Stripping conductors for terminals, Kraft unwinds quickly without use of sharp tools next to conductors, can be broken off by hand, and allows space inside steel for Anti-Short bushing.

## Type SE Triangle Service Entrance Cable

For use on circuits not exceeding 208 volts to ground. Recommended for use from the pole to building and down the side of the building, in places not subject to mechanical injury, without conduit.

## Type SE-ABN Armored Flat Type

Galvanized Steel  
Approved by Underwriters' Laboratories, Inc.

The flat steel tape gives an added protection, permits easy removal of outer jacket without nicking of concentrically wound conductor, and helps to prevent contact of bare neutral with outer coverings.

Construction detail: (1) Solid or stranded tinned copper conductors. (2) Triangle standard code grade and thickness of insulation. (3) Each conductor braided and weather-proofed—color coded. (4) Bare neutral, concentrically laid, consists of small tinned copper wires. (5) Galvanized flat steel armor wrapped around and over bare neutral. (6) Double wrap of rubber tape. (7) Substantial weatherproof and flameproof braid overall, having a grey paint finish; is clean and takes any color house paint.

## Type SE-UBN Unarmored Concentric Bare Neutral Type

Approved by Underwriters' Laboratories, Inc.

Consists of either one or two insulated inner conductors over which is laid a concentric bar conductor protected by heavy, moisture-proof coverings.

Construction detail: (1) Inner conductors No. 8 A.W.G. and larger to be stranded, smaller to be solid, tinned copper wire; (2) Insulated with standard N.E.C. grade and thickness of insulation; (3) Each conductor braided and weather-proofed and color coded in three conductor cables; (4) Outer conductor is formed of tinned copper wires, concentrically stranded around the inner conductor or conductors; (5) Overall are two heavy, rubberized tapes and a weatherproof cotton braid, having a grey paint finish.

\*Not approved for use under N.E.C.

†Where specified, a paper wrap under the concentric tinned copper wires will be furnished.

## Type SD-SDC Triangle Concentric Service Drop Cable

With Concentrically Wound Bare Neutral Wire

Approved by Underwriters' Laboratories, Inc.

For use on circuits not exceeding 208 volts to ground.

Recommended for use from the pole to the building and down the side of the building either on insulators or in rigid conduit. The cable must be in conduit at least 8 feet above the ground.

Also used as range feeder cable.

### Construction Detail

Two conductor: inner conductor insulated with N.E.C. grade compound and covered with single fibrous covering, outer conductor concentrically stranded thereafter, paper tape and weather-resisting and flame-resisting cotton braid overall.

Three conductor: two conductors insulated with N.E.C. grade compound and covered with single fibrous covering and laid parallel with the third conductor stranded concentrically thereafter, paper tape and weather-resisting and flame-resisting cotton braid overall.

Available in all-conductor-insulated-type.

## FURTHER INFORMATION ON REQUEST

## Crescent Impervex Trenchwire Underwriters' Laboratories Type USE Single Conductor—600 Volts

Designed for direct earth burial. A narrow trench is dug preferably two feet or more in depth and two or more Trenchwires laid together to form a cable.

Particularly suitable for underground services from power line to meter and/or service equipment; for connecting several buildings from the same service as on farms, estates and institutions; and for street, airport, and other outdoor lighting.

Consists of soft annealed tinned copper conductor, solid in sizes No. 12 to No. 8 A.W.G. and standard concentric stranded in larger sizes. The conductor is insulated for 600 volts with Impervex special moisture-resisting rubber compound and a tough Neoprene jacket is applied overall.

The Neoprene jacket is flameproof; acid, alkali, moisture and oil resisting, and practically unaffected by sunlight, air, and exposure to weather.

Insulation Thick. 64ths Inch	Jacket Thick. 64ths Inch	Overall Diam. In.	Maximum Allowable Current Amperes	*FACTOR SINGLE PHASE, A.C. 60 CY. PER SEC. LOAD POWER FACTOR		Weight Pounds per 1000 Feet
				80 Per Cent Lagging	100 Per Cent Lagging	
12	3	.275	20	318	260	55
10	3	.295	30	502	415	75
8	4	.355	45	792	667	105
6	4	.410	65	1203	1034	155
4	4	.490	85	1846	1637	230
2	4	.550	115	2781	2581	325
1	5	.655	130	3362	3255	425
1/0	5	.695	150	4058	4075	510
2/0	5	.740	175	4849	5066	615
3/0	5	.790	200	5780	6345	740
4/0	5	.850	230	5887	8000	900

Dimensions and weights listed above are approximate.

\*To determine the proper size to use multiply the one-way length of the circuit by the current in amperes and divide by the desired voltage drop. This gives a factor. Select the size with the next larger factor for the proper load power factor, but not exceeding the maximum allowable current.

For 3 phase A.C. circuits, multiply calculated factor by 0.87 and proceed as above.

## Crescent Motor Lead Wire Rubber Insulated—Single Braid—600 Volts

Consists of flexible, soft annealed copper conductor with a paper or cotton separator in sizes No. 18 to No. 10 A.W.G. and tinned copper conductor, without a separator, in larger sizes.

The conductor is insulated with Code Grade rubber compound and covered with a single cotton braid thoroughly saturated with a high melting point asphalt and finished with a moisture-resistant, flame-retarding compound.

Available with a lacquer finish also.

Dimensions and weights listed above are approximate.

### Crescent Flexible and Extra Flexible Wire

Rubber Insulated—Braided—600 Volts

Consists of flexible or extra flexible soft annealed tinned copper conductor insulated for 600 volts with Code Grade rubber compound (a higher grade can be furnished if required).

Over the insulation is applied a single or double braid.

Braids are thoroughly saturated with a high melting point asphalt and outer braids are finished with a moisture-resistant, flame-retarding compound.

### Crescent Annunciator Wire

Single Conductor—Twisted Pair

Consists of solid, soft annealed bare copper conductor insulated with two wraps of cotton applied in reverse directions, saturated in paraffin, and polished.

Single conductor is furnished in assorted standard colors.

Twisted pair is made up of two different colored conductors for polarity identification.

Available with a black, weatherproof finish for use in damp places.

Standard carton, 10 spools. Single conductor is also put up in 1/4, 1/2, and 1-pound coils packed individually.

*SINGLE CONDUCTOR—SHIPPING CARTON—WEIGHT, LB.						—TWISTED PAIR—Ship. Wt. Lb.

**Connecting wire:** single conductor wire is also used as connecting wire for blasting purposes and is furnished on 1-pound spools packed 50 spools in a carton weighing 58 pounds.

### Crescent Gas Tube Sign and Oil Burner Ignition Cable

Underwriters' Laboratories Type GTO

Consists of flexible stranded, soft annealed tinned copper conductor insulated with a special high-voltage rubber compound.

The weatherproof type has a rubber-faced tape and a cotton braid thoroughly saturated with a high melting point asphalt and finished with a moisture-resistant, flame-retarding compound.

The lacquer type has a close cotton braid which is impregnated with a lacquer saturant and finished with a number of coats of black, flame-retarding lacquer.

A glass braid can be furnished in place of cotton at slightly higher cost and will give increased life under severe operating conditions.

### Crescent Damp-Proof Office Wire

#### Single Conductor—Duplex

Consists of solid, soft annealed bare copper conductor insulated with two wraps of cotton applied in reverse directions and saturated in a weatherproof compound. Over a single conductor or two conductors laid parallel is a cotton braid, saturated in paraffin and polished.

Standard colors are red, blue, red-white, and blue-white for single conductor, and red-white for duplex.

Standard carton, 5 coils. Standard coil weight, 10 pounds.

## Crescent Thermostat Cable

## Braided

Consists of solid soft annealed bare copper conductors each insulated with two wraps of cotton applied in reverse directions, saturated in paraffin, and polished.

Two or more insulated conductors, color coated for polarity identification, are cabled and covered with a white cotton braid, saturated in paraffin and polished.

Standard length of coil in package, 500 feet.

## Armored—Rubber Insulated

Armored thermostat cables with rubber insulated conductors in the following constructions can be supplied on orders of sufficient quantity of a size:

Two to ten conductors of No. 18 or No. 16 solid, soft annealed tinned copper, insulated with  $\frac{3}{64}$ -inch Code Grade rubber compound and covered with a paraffin saturated cotton braid. Two or more color coded conductors are cabled and covered with a wrap of tough, impregnated paper. An interlocking, galvanized steel armor is applied overall.

Two to ten conductors of No. 18 or No. 16 solid, soft annealed tinned copper, insulated with  $\frac{3}{64}$ -inch Code Grade rubber compound and covered with a paraffin saturated cotton braid. Two or more color coded conductors are cabled and covered with a paraffin saturated cotton braid. Half-oval, galvanized steel armor is applied overall.

## Type S Simplex-Tirex Portable Cord

Selenium Neoprene Armored

A non-kinking cord with flexible copper conductors, rubber insulation and a Selenium neoprene rubber sheath which is highly resistant to abrasion. Waterproof, and acids, greases and alkalis have little, if any, effect upon it. Single conductor is approved by Underwriters' for car wiring only. The 2, 3, and 4 conductor is N.E.C. standard for 600 volts. It fits standard bushings and is satisfactory for portable lamps, tools and other appliances.

Supplied in standard lengths of approximately 250 feet in cartons or spools or coils. Longer lengths on reels.

Cured in lead.

## Type SJ Simplex-Tirex Portable Cord

Selenium Neoprene Armored

Made practically the same as the Type S except that it is smaller in diameter and lighter in weight. Suitable for service in offices, dwellings and similar places. Intended for service on such equipment as vacuum cleaners, refrigerators, fans, washing machines, lamps, office equipment and small electric tools. No N.E.C. standards for size 18, 16, 14; 2, 3, and 4 conductor approved by Underwriters' for 300 volts.

Packed in cartons or on spools, each package containing approximately 250 feet of 2-conductor cord.

Cured in lead.

## Tirex Shot Fire Cable

## 2-Conductor

Selenium Neoprene Armored

Suitable for rough work in damp or wet places. Not affected by acid, gas or oil.

The particular features which will appeal to the shot firer, are the small diameter of about  $\frac{1}{4}$  inch and the light weight of  $4\frac{1}{2}$  pounds to 100 feet.

Cable is flexible and has adequate tensile strength for the work for which it was designed. Does not kink or snarl.

Cured in lead.

Size A.W.G.	18
Approximate Outside Diameter	inches 27
Approximate Weight per 1000 Feet	pounds 45

### Simplex-Anhydrex 600 Volt Non-Leaded Underground Cable

A modern cable particularly applicable to networks, series lighting circuits, municipal street lighting, park, playground and airport illuminating systems, etc.

Has low water absorption insulation on the conductor and a tough, neoprene jacket for burial directly in the ground without a lead sheath or without the use of ducts.

Furnished in either single or multi-conductors.

Prices upon request.

### Simplex-Telex Twin Underground Telephone Cable

A rubber insulated, non-water absorptive telephone cable made with a rodent resistant tough rubber jacket, or with an armor over the jacket, but without lead, for laying directly in the ground for rural telephone lines, private estates and similar applications.

Standard packages of 2500 feet of rubber jacketed and 1500 feet of armored cable are carried in stock on 22-inch non-returnable reels. No charge for this stock type reel; and no credit will be allowed.

If other lengths are required, there will be an extra charge for packaging or for the use of returnable reels.

#### Rubber Jacket Telex Cable

No. 17 solid tinned copper twin cable, insulated with tough rubber jacket.

Outside diameter, .35 x.20-inch.

Standard package is 2500-foot length on 22-inch non-returnable reel.

Shipping weight per 1000 feet, 50 pounds.

Per 1000 Feet.....

#### Armored Telex Cable

No. 17 solid tinned copper twin cable, insulated with a tough rubber jacket; armored with 2 bright steel tapes. Impregnated paper tape overall.

Does not require a ground wire, but the following precautions should be taken.

At each splice a jumper wire should be soldered from steel to steel to assure continuous electrical circuits in the steel.

At the pole line end a jumper wire should be soldered onto the steel of the cable and connected to the grounding system which is always a part of the installation at the last pole of the overhead run.

The jumper wire should be about No. 14 A.W.G. either tinned or lead coated and without insulation. A special solder should be used to resist corrosion.

Outside diameter, .42x.32-inch.

Standard package is 1500-foot length on 22-inch non-returnable reel.

Shipping weight per 1000 feet, 140 pounds.

Per 1000 Feet.....

#### Telex Ground Wire

No. 14 (.066) lead dipped bare copper wire for grounding.

Furnished on 11-inch non-returnable reels containing 3000 feet.

Shipping weight per 1000 feet, 14 pounds.

Per 1000 Feet.....

## Accessories for Simplex-Telex Twin Underground Telephone Cable

### Spinners

A means of transposing conductor every 3 to 5 feet, and at the same time protecting the cable as it comes off over the head of the reel.

Each.....

### Vulcanizers

Including mold, indicating light, buzzer, battery leads and clips, self-contained in cover box for use with 6-volt automobile battery.

Each.....

### No. 102-A U-Type Terminal Boxes

For rubber jacket or armored cable.

Each.....

### No. 153-A Loading Coil Cases Equipped with No. 638 Coil

Each.....

### Crimping Tools

For crimping brass sleeves to copper conductors.

Each..... \$4.00

### Splicing Kits

Rubber slab and four brass conductor splicing sleeves, two extra.

Packed in individual packages.

For One Splice.....each ....

## Killefer Cable Layers

Designed for burying small cable, flat counterpoise and heavily insulated wire without ditching or backfilling.

Strongly constructed frame of structural steel; welded and hot riveted. Wearing parts are protected and reinforced. Each part is removable and replaceable.

Wheels are constructed of highest-grade steel for lasting strength. Heavy-duty spokes are riveted into wide rims which are flanged and grooved for extra sturdiness and to protect the spoke heads. Each wheel turns on a low-cost replaceable sleeve which takes the wear and protects the axle.

### Tirex Welding Cable Super Flexible—Single Conductor Selenium Neoprene Armored

Safe for both operator and the public when used on streets and public ways.

Conductor consists of fine copper wires stranded to give maximum flexibility.

The insulation is compounded and cured in lead to meet the unusual service conditions. It strips clean because of the separator between the insulation and the conductor.

1	133	1.44	1880	...	...	....	....

Type W—3-Conductor  
Without Ground Wires

For 3-phase portable machinery. Frequently used for dredges and shovels. The tough outer armor is suited for rough work out of doors. Atmospheric conditions, oils, acids, and greases do not affect this cable to any appreciable extent. Cured in lead.

Size A.W.G.	No. of Strands	O.D. In.	Gross Wt. Lb. per 1000 Ft.	Size A.W.G.	No. of Strands	O.D. In.	Gross Wt. Lb. per 1000 Ft.

### Whitney Blake No. 17 A.W.G. Teleprene Drop Wire

Bronze, Parallel, Specification 17 TBP  
Bronze, Reinforced Parallel, Specification 17 TBP-R

Used to extend telephone circuit from open wire or distributing cable terminals on pole to subscribers' station.

Teleprene drop wire is furnished with No. 17 A.W.G. Teleplate coated bronze conductors insulated with a rubber compound designed for long life and excellent electrical characteristics, and jacketed with a tire tread type of Neoprene compound.

The Teleplate coating consists of a lead coating applied directly to the bronze wire to resist corrosion and an electroplated brass coating over the lead to give enduring adhesion of the insulation to the conductor.

The protective lead coating meets the Ammonium Persulfate Test for continuity of coating of A.S.T.M. Specification B-189-44T.

The reinforced types have a tough reinforcing textile braid between the conductor insulation and the outer jacket.

A double ridge raised tracer on the side of the jacket gives positive polarity identification.

Reinforced Teleprene has, substantially, twice the compression resistance, half again higher insulation resistance, three times the dielectric strength, and, by test, is fifteen times as rugged as corresponding weather-proof drop wires.

The tire tread type Neoprene jacket has extremely good resistance to sunlight, weather, and natural aging. The Neoprene jacket has excellent resistance to oil, most acids, alkalis, and other corrosive chemicals which destroy braids. It is practically unaffected by changes in temperature, does not melt or soften in summer, or become hard and brittle in winter. It withstands the effects of smoke, various fumes, and air conditions found in manufacturing areas, mines, and railroad centers.

### Whitney Blake No. 17 A.W.G. Teleprene Drop Wire

Bronze, Twisted Pair, Specification 17TB2  
Bronze, Reinforced Twisted Pair, Specification 17TB2-R

Has double ridged tracer on jacket of one wire for polarity identification.

Has same Teleplate coated conductors, rubber conductor insulation, and tough Neoprene outer jacket as Specification 17TBP.

Reinforced twisted pair has strong textile inner braid similar to Specification 17TBP-R.

Specification No. ....	17TB2	17TB2-R
Coil Eye, Approximate. .... in. ....	16	16
Approx. Weight per 1000 Feet. .... lb. ....	40	40

### Whitney Blake No. 17 A.W.G. Weatherproof Drop Wire

Bronze, Parallel, Specification 17BP

The standard bronze conductor is signal bronze but Hitensso bronze, having properties listed below, can be supplied when specified.

All conductors are Teleplate coated for corrosion resistance and to promote good adhesion between conductor and insulation.

Conductor insulation is long life, highly compression resistant rubber compound with excellent electrical properties. A raised ridge in the rubber insulation on one conductor provides polarity identification.

A heavy braid of strong, unbleached, two-ply cotton yarn is closely woven over the two parallel insulated conductors to give added service life to the wire.

The braid is completely saturated with an asphalt base compound, containing straight asphalt of crude oil origin, that is both moisture and weather resistant. A tough, flexible, high melting point, finishing coat of Stearine pitch and mica is applied over the saturated braid. The life of the rubber and braid are increased by this effective seal against light, moisture and oxygen.

### Whitney Blake No. 17 A.W.G. Weatherproof Drop Wire

Bronze, Twisted Pair, Specification 17B2  
Copperweld, Twisted Pair, Specification 17CW2

Has raised tracer in rubber insulation on one wire, permitting more even application of weatherproof finish and providing more uniform wear of the braid.

Conductors are Teleplate coated.

Has same high grade rubber insulation, braid, and weather-proofing conductor resistance, breaking strength and diameter over rubber as Specification 17BP.

Specification 17B2 can be furnished also with Hitensso Bronze conductor.

Specification No. ....	17B2	17CW2
Coil Eye, Approximate. .... in. ....	16	16
Approx. Weight per 1000 Feet. .... lb. ....	33	33

### Whitney Blake No. 17 A.W.G. Weatherproof Drop Wire

Bronze, Parallel, Specification 17BT  
Hawser Twine Braid, Abrasion Resistant Tree Wire

Made for service where swaying of tree limbs rub and fray the standard braids quickly.

Constructed similar to Specification 17BP except that the braid is heavy hawser twine.

Standard conductor is signal bronze Teleplate coated. Conductor resistance, breaking strength, diameter over rubber, rubber insulation, and weatherproofing are the same as Specification 17BP.

Specification No. ....	17BT
Coil Eye, Approx. .... in. ....	16
Approx. Weight per 1000 feet. .... lb. ....	47

**Whitney Blake No. 14 A.W.G. Outside Wire****Hard Copper, Twisted Pair, Specification 14HC2**

Used in drops extending telephone circuits from open wire or distributing cable terminals where transmission loss of the drop must be lower than that of No. 17 Bronze or Copperweld.

Used also in bridling toll line circuits.

Has raised ridge in rubber insulation on one conductor for polarity identification.

All conductors are Teleplate coated for corrosion resistance and to promote good adhesion between conductor and insulation.

Conductor insulation is long life, highly compression resistant rubber compound with excellent electrical properties.

A heavy braid of strong, unbleached, two-ply cotton yarn is closely woven over each of the two parallel insulated conductors to give added service life to the wire.

The braid is completely saturated with an asphalt base compound, containing straight asphalt of crude oil origin, that is both moisture and weather resistant. A tough, flexible, high melting point, finishing coat of Stearine pitch and mica is applied over the saturated braid. The life of the rubber and braid are increased by this effective seal against light, moisture, and oxygen.

**Whitney Blake Bridle Wire**

**No. 18 Soft Copper, Twisted Pair, Specification 18B2**  
**No. 20 Soft Copper, Twisted Pair, Specification 20B2**

Used in ring wiring and in bridling open wire lines.

Conductor Teleplate coated for corrosion resistance and good adhesion of insulation to conductor.

Weatherproof braid has raised tracer threads or threads to identify conductors in pair, triple, or quadruple wires.

Rubber insulation similar to Specification 14HC2.

Saturated and finished the same as Specification 14HC2.

Specification No.....	18B2	20B2
Max. Conductor Resistance,		
Ohms per 1000 Feet.....	7.5	11
Diameter over Rubber, Nominal.....in.	.090	.080

**Whitney Blake Teleseal Signal and Communication Wire****Twisted Pair, Hard Copper**

For low voltage signal and communication purposes in wet locations. Has double-ridged tracer on jacket of one wire for polarity identification.

Furnished in two sizes, Nos. 14 and 16, with Teleplate coated hard copper conductors. Characterized by low moisture absorption, low transmission losses at telephone frequencies, and stability of operation under water.

Over the insulation, and adherent to it, is a tough, tire tread type of Neoprene jacket identical in composition to that used on Teleprene.

Size A.W.G.....	14	16

### Whitney Blake Inside Telephone Wire

#### No. 22 A.W.G. Soft Copper, Twisted Pair, Plastite Insulation, Specification 22PN2

#### No. 19 A.W.G. Soft Copper, Twisted Pair, Plastite Insulation, Specification 19PN2

#### No. 19 A.W.G. Soft Copper, Twisted Pair, 1/64-Inch Rubber Insulation, Specification 19N2

Used inside buildings for extending circuits from arrestors or other terminating fixtures of outside lines to station sets.

Furnished in single pair, triple, and quadruple.

Plastite insulated types have soft copper conductors with smooth Plastite, synthetic resin insulation that has high dielectric strength and is tough, flame proof, and highly resistant to abrasion, water, oil, alkali, and most solvents.

Plain, single and double ridged tracers make identification easy. Standard colors are ivory and brown.

Rubber insulated type has braid of brown hard glazed yarn over each insulated conductor.

Specification No.	22PN2	19PN2	19N2
Conductor Resistance, Ohms per 1000 Feet.....Max.	20	20	10
Diameter over Insulation, Nominal.....in.	.074	.086	.096
Coil Eye, Approximate.....in.	7	9	9
Approx. Weight per 1000 Ft.....lb.	9	14	21

### Whitney Blake Single Conductor Concentric Microphone Cable

For ribbon and single button carbon microphones, loud speaker circuits, permanent or tie-in wiring, low impedance transmission lines up to about 600 ohms, and communication system circuits where shield is used for grounded side of the circuit.

**No. N-26J-1.** Low capacity flexible cable for crystal microphones and for permanent or tie-in wiring on medium or high impedance transmission lines. No. 26 A.W.G. stranded tinned bronze conductor, high grade, low capacity rubber insulation, braided tinned copper shield, cotton covering, and tough oil-resistant neoprene jacket.

**No. N-22J-1.** No. 22 A.W.G. tinned solid copper conductor, high quality rubber insulation, braided tinned copper shield, cotton covering, and oil-resistant neoprene covering.

**No. N-18J-1.** Same as No. N-22J-1 except has No. 18 A.W.G. tinned stranded Copper conductor.

No.	N-26J-1	N-22J-1	N-18J-1
Conductor Size A.W.G.	26	22	18
Capacity Conductor-Shield .....mmf/foot	30	85	150
Outside Diameter.....inches	0.245	0.150	0.171
Approximate Weight per 1000 Feet.....pounds	46	17	21

No. N-22J-1 and No. N-18J-1 furnished with Plastite synthetic resin insulation and jacket on special order.

### Whitney Blake Two-Conductor Shielded Cable

For double button carbon microphones, dynamic microphones, and photo-electric cell circuits using shield as grounding connection and for low impedance transmission lines up to 600 ohms.

**No. N-22J-2.** No. 22 A.W.G. tinned solid copper conductors, high grade rubber insulation, braided tinned copper shield, cotton covering, and neoprene jacket.

**No. N-20J-2.** Same as No. N-22J-2 except conductors are No. 20 A.W.G. tinned stranded copper.

**No. N-18J-2.** Same as No. N-22J-2 except conductors are No. 18 A.W.G. tinned stranded copper.

No.	N-22J-2	N-20J-2	N-18J-2
Conductor Size A.W.G.	22	20	18
Capacity: Conductor to Shield.....mmf/ft.	85	115	125
Conductor to Conductor .....mmf/ft.	45	60	70
Outside Diameter.....inches	0.225	0.280	0.280
Approximate Weight per 1000 Feet.....pounds	30	50	60

Furnished with Plastite synthetic resin insulation on special order.

### Whitney Blake Three-Conductor Shielded Cable

For double button carbon microphones operating into circuits where diaphragm of microphone must be above ground potential, dynamic loud speaker extensions, and low impedance circuits up to 600 ohms.

**No. N-20J-3.** No. 20 A.W.G. tinned stranded copper conductors, high grade rubber insulation, braided tinned copper shield, cotton covering, and neoprene jacket.

No.	N-20J-3
Conductor Size A.W.G.	20
Capacity: Conductor to Shield.....mmf/ft.	115
Conductor to Conductor.....mmf/ft.	60
Outside Diameter.....inches	0.285
Approximate Weight per 1000 Feet.....pounds	60

Corresponding type with Plastite synthetic resin insulation can be furnished on special order.

## Whitney Blake Speech Input and Sound System Cable Inter-Panel and Communication Equipment Wiring Cable

Nos. C-22SB-2 and C-20SB-2

Nos. C-22SBC-2 and C-20SBC-2

For inside use for internal equipment and panel wiring. Types with overall cotton braid may be used for speech and audio circuits on inside communication systems, equipment and panel cross-connection, etc.

Has two tinned enameled solid copper conductors, silk or rayon wind, polarized cotton wind or braid, lacquer or wax finish and a braided bare copper shield.

No.	Conductors	A.W.G.	Shield to Conductor	Conductor to Conductor	Outside Diameter Inches	Overall Cotton Braid	Approximate Weight Pounds per 1000 Feet
C-22SB-2	2	22	100	60	0.125	No	12
C-22SBC-2	2	22	100	60	0.140	Yes	13
C-20SB-2	2	20	90	55	0.187	No	27
C-20SBC-2	2	20	90	55	0.205	Yes	28

Furnished with braided tinned copper shield and with Plastite synthetic resin insulated copper conductors on special order.

## Whitney Blake Multi-Channel Sound System Cable

### Main Distribution Cable

No. SS104

Used in hotels, hospitals, schools, auditoriums, etc., to transmit several sound programs simultaneously from main control and operating panel to local distribution points. Made to order only.

### No. SS100, 6 Pair Unshielded Cable

Each twisted pair consists of two No. 22 A.W.G. tinned solid copper conductors insulated with Plastite synthetic resin insulation. Six twisted pairs are cabled together and covered with a Plastite resin jacket. Overall diameter, 0.370 inches.

### No. SS103, 6 Pair Overall Shielded Cable

Same construction as No. SS100 except that after cabling the six twisted pairs together, a cotton covering and a braided tinned copper overall shield is applied and a lacquered cotton braid is then applied over the shield. Overall diameter, 0.325 inches.

### No. SS104, 5 Shielded Pair Cable

Each twisted pair consists of two No. 18 A.W.G. tinned solid copper conductors insulated with Plastite synthetic insulation and having a braided tinned copper shield applied directly over each twisted pair. Five of these individually shielded twisted pairs are cabled together, covered with a cotton wind and an overall jacket. Overall diameter, 0.560 inches.

### No. SS105, 7 Shielded Pair Cable

Same construction as No. SS105 except that it has seven separately shielded pairs. Overall diameter, 0.620 inches.

### Special Applications

Multi-channel cable similar to the above with shielded or unshielded twisted pairs or concentric cable for separate channels, with or without overall shield, and with lacquered braid or Plastite synthetic resin outer jacket can be furnished on special order.

### Hospital Silent Call Cord

Has five No. 18 A.W.G. stranded conductors covered with Plastite synthetic resin insulation. One insulated conductor is red and one white for circuit identification. Has a Plastite overall jacket. Overall diameter, 0.320 inches.

## Whitney Blake Co-Axial Radio Frequency Cables

### No. RG-29/U—Solid Copper Conductor

Small size polyethylene insulated low loss semi-flexible cable with polyethylene jacket.

### No. RG-37/U—Solid Copper Conductor

General purpose small size semi-flexible I.F. cable, synthetic rubber insulated with polyethylene jacket.

### No. RG-38/U—Solid Copper Conductor

Same as No. RG-37/U but with double shield.

### No. RG-39/U—Solid Copperweld Conductor

Small size semi-flexible I.F. cable synthetic rubber insulated with double shield and polyethylene jacket.

### No. RG-41/U—No. 30 Stranded Copper Conductor

Medium size synthetic rubber insulated semi-flexible cable with neoprene jacket for twisting applications.

### No. RG-62/U—Solid Copperweld Conductor

Small size, low capacity, air space cable. Center conductor is spirally wrapped with a polyethylene thread. Synthetic resin jacket.

No.	Tinned Copper Shield	Nominal Cable O.D. Inches	Nominal Impedance Ohms	Nominal Attenuation Decibel Per 100 Ft.	Nominal Cap. UUF Foot	Maximum Operating Voltage RMS.

RG-39/U	Double	0.312	72.5	0.6 at 1 mc.	28	1000
RG-41/U	Single	0.425	67.5	0.5 at 1 mc.	27	3000
RG-62/U	*Single	0.242	93	8.0 at 400 mc.	13.5	750

\*Plain copper.

## Type SJ Whitney Blake Rubber Sheathed Cord

Maximum Voltage Rating, 300 Volts

Approved by Underwriters' Laboratories

Recommended for light duty tools, refrigerators, vacuum cleaners, washing machines, sewing machines, multigraph machines, cash registers, billing machines, drop lights, extension cords, etc.

Made with flexible and extra flexible stranded copper conductors, separator, 30 per cent rubber insulation, twisted with fillers and covered with cotton binder, 40 per cent tough rubber jacket overall. Also made with oil resistant Neoprene jacket, Type SJO.

Flexible stranding is for stationary service and extra flexible stranding for movable devices.

The rubber compounds of this moisture-proof cord are age-resisting and provide high resistance to abrasion, shock, and twisting.

Put up in 250-foot coils or, where quantity warrants, in factory lengths on reels.

## Type S Whitney Blake Rubber Sheathed Cord

Maximum Voltage Rating 600 Volts

Approved by Underwriters' Laboratories

For heavy portable tools, pendant lighting, car heaters, conveyors, garage heaters, ticket vendors, floor polishers, sanders, etc.

Made with flexible stranded copper conductors, separator, 30 per cent rubber insulation, conductors twisted with fillers and covered with cotton binder, 40 per cent heavy duty rubber jacket overall. Also made with oil resistant Neoprene jacket, Type SO.

The rubber compounds of this moisture-proof cord are age-resisting and provide high resistance to abrasion, shock, and twisting.

Put up in 250-foot coils or, where quantity warrants, in factory lengths on reels.

## Type C Whitney Blake Twisted Pair Lamp Cord

Approved by Underwriters' Laboratories

Recommended for portable lamps, clocks, fans, toys, etc. Made with stranded copper conductors, paper separator, code rubber insulation, and glazed cotton green and yellow braid over each conductor. Put up in 250-foot coils or, where quantity warrants, in factory lengths on reels.

Size A.W.G.	18	16	14	12

Approx. Wt. per 1000 Ft.	lb. 32	40	66	82

## Type POSJ Whitney Blake Tru-Rip Rubber Sheathed Parallel Cord

Maximum Voltage Rating, 300 Volts

Approved by Underwriters' Laboratories

Used for lamps, clocks, radios, fans, toys, scales, signs, cash registers, etc. Made with flexible stranded copper conductors, separator, and a 40 per cent rubber insulation.

Waterproof, and slits, strips, and handles easily.

Available in black, brown, and ivory, and other Nema colors on request.

Put up—Type POSJ-64, 500-foot spools; Type POSJ-32, 250-foot spools; or where quantity warrants, in factory lengths on reels.

Type	POSJ-64	POSJ-32	POSJ-32
Size A.W.G.	18	18	16

Approx. Wt. per 1000 Ft.	lb. 26	38	48

## Type SV Whitney Blake Rubber Sheathed Cord

Maximum Voltage Rating, 300 Volts

Approved by Underwriters' Laboratories

For light duty appliances such as vacuum cleaners, food mixers, fans, etc.

Made with flexible stranded copper conductors, separator, 30 per cent rubber insulation, conductors twisted with fillers and covered with cotton binder, 40 per cent tough rubber jacket overall. Also made with oil-resistant Neoprene jacket, Type SVO.

The rubber compounds of this moisture-proof cord are age-resisting and provide high resistance to abrasion, shock, and twisting.

Put up in 250-foot coils or, where quantity warrants, in factory lengths on reels.

Size A.W.G.	18
No. of Strands	41
Size Wire	34
Approximate O.D.	inches .250
Current Carrying Capacity	amperes 7
Approximate Weight per 1000 Feet	pounds 39

## Type POT Whitney Blake Tru-Rip Plastite Cord

Maximum Voltage Rating, 300 Volts  
Approved by Underwriters' Laboratories

Used for lamps, clocks, radios, and light appliances.

Made of soft annealed No. 34 bare copper stranded conductors, with Plastite jacket applied over parallel conductors. Polarity is established by use of ridges on the insulation. This construction permits easy separation into two separately insulated conductors.

Colors: other than black, brown or ivory require minimum order of 25,000 feet.

Put up in 250-foot spools or factory lengths on non-returnable reels.

Type.....	Pot-64	Pot-32	Pot-32

## Type SVT Whitney Blake Light Duty Plastite Cord

Maximum Voltage Rating, 300 Volts  
Approved by Underwriters' Laboratories

For vacuum cleaners, fans, and food mixers.

Made of soft annealed No. 34 bare copper stranded conductors, Plastite insulation, twisted with fillers, cotton wind, and Plastite jacket.

Color: black.

Put up in 250-foot coils or factory lengths on non-returnable reels.

Size A.W.G.....	18

## Type SJT Whitney Blake Medium Duty Plastite Cord

Maximum Voltage Rating, 300 Volts  
Approved by Underwriters' Laboratories

Used for drills, grinders, portable tools, washing machines, refrigerators.

Made of soft annealed No. 34 bare copper stranded conductors, plastite insulation, twisted with fillers, cotton braid or wrap, plastite jacket.

Color: black.

Put up in 250-foot coils or factory lengths in non-returnable reels.

Size A.W.G.	No. of Conductors	No. and Size of Strands	Approx. O.D. Inches	Current Carrying Capacity Amperes	Insulation Thickness Inches	Approx. Wt. Lb. per 1000 Feet

Cord Sets  
built to customers specifications

**Type HPD Whitney Blake Heater Cord**

3000 Cycle

Approved by Underwriters' Laboratories

Maximum Voltage Rating, 300 Volts

For flat irons, toasters, coffee brewers, heating pads, waffle irons, roasters, soldering irons, heaters, griddles, grills, etc.

Made with flexible stranded copper conductors, special cotton separator,  $\frac{1}{4}$ -inch unvulcanized rubber insulation, long fiber fireproof asbestos covering on each conductor, and a braid of rayon, or glazed cotton, or long wear twine applied over the twisted conductors.

Put up in 250-foot coils or, where quantity warrants, in factory lengths on reels.

No.....	18	17	16	14
No. of Strands.....	41	52	65	104

10,000 Cycle

Approved by Underwriters' Laboratories

Maximum Voltage Rating, 300 Volts

Similar to 3000 cycle type but has more flexibility and longer flex life.

Put up in 250-foot coils or, where quantity warrants, in factory lengths on reels.

Size A.W.G.....	18	17	16
No. of Strands.....	65	82	104

Glazed Cotton.....lb.	31	36	40
Twine.....lb.	35	40	46

**Type HSJ Whitney Blake Rubber Sheathed Heater Cord**

3000 Cycle—Approved by Underwriters' Laboratories

For applications requiring a moisture-proof heater cord, such as soldering irons, glue pots, permanent wave machines, tire vulcanizers, etc. Maximum voltage rating, 300 volts.

Made with flexible stranded copper conductors, special cotton separator,  $\frac{1}{4}$ -inch vulcanized rubber insulation, long fiber asbestos covering on each conductor, soft cotton braid over the twisted conductors, and 40 per cent rubber jacket overall.

Put up in 250-foot coils or, where quantity warrants, in factory lengths on reels.

Size A.W.G.....	18	16	14
No. of Strands.....	41	65	104

**Whitney Blake Thermoprene Locomotive Headlight Wire**

Available in two types. The first type has a  $\frac{3}{4}$ -inch wall of heat resistant rubber insulation; in this respect it resembles the old style locomotive headlight wire. The second type has a  $\frac{1}{2}$ -inch wall of heat resistant rubber insulation. Both types have a substantial Neoprene jacket overall.

The I.C.C. insulation resistance requirements for cab signal equipment installations are stringent and one railroad's specifications for the wire requires an insulation resistance of 5630 megohms per 1000 feet. Whitney Blake Neoprene jacketed type with the  $\frac{3}{4}$ -inch wall of heat resistant rubber has an insulation resistance of over twice this while the type with a  $\frac{1}{2}$ -inch wall exceeded the specification requirements by 60 per cent.

Cab signal equipment wiring is exposed, at times, to rather high temperatures; at the same time, it may come in contact with oil, and frequently becomes wet from rain, melted snow, fog, or condensed steam. Due to the products of combustion, this moisture on the wire is quite likely to become acidified. Laboratory tests, under simulated service conditions, showed that the Neoprene jacketed locomotive headlight wire withstood the harmful effects of these conditions after samples of the old style wire had failed.

Available in the following sizes:

**No. 14 A.W.G.** single conductor, 19 strands tinned copper,  $\frac{3}{4}$ -inch wall, 0.025-inch Neoprene jacket; 0.226-inch outside diameter. Cat. No. 14LH- $\frac{3}{4}$

**No. 14 A.W.G.** single conductor, 19 strands tinned copper,  $\frac{1}{2}$ -inch wall, 0.025-inch Neoprene jacket; 0.195-inch outside diameter. Cat. No. 14LH- $\frac{1}{2}$

**No. 12 A.W.G.** single conductor, 19 strands tinned copper,  $\frac{3}{4}$ -inch wall, 0.025-inch Neoprene jacket; 0.245-inch outside diameter. Cat. No. 12LH- $\frac{3}{4}$

**Deltabeston Flexible Cord**

Type AFS

(Table YK-8290)

Made with flexible conductors and a tough 40 per cent overall rubber jacket which enables it to withstand severe mechanical abuse. Recommended for use as a portable cord where the individual conductors are in direct contact with the heating element of heating devices.

Due to its construction, this flexible cord is moisture-proof and heat-resisting.

Size A.W.G.	Stranding	2-Conductor		Rubber Jacket Inches	*Overall Diameter Inches
		Felted Asbestos Inches			
18	16/.010	.032		.0625	.390
16	26/.010	.032		.0625	.405

14	41/.010	.032		.0781	.480
12	65/.010	.047		.0781	.635

Type AFSJ

(Table YK-8289)

Similar in construction to Type AFS cord above, except that it has a lighter overall rubber jacket. Especially suitable for use as a flexible cord for home appliances and small portable tools.

Moisture-proof and heat-resisting.

Size A.W.G.	Stranding	2-Conductor		Rubber Jacket Inches	*Overall Diameter Inches
		Felted Asbestos Inches

\*Maximum and minimum not over  $\pm 5\%$  from normal.

**Type AVA Deltabeston Switchboard Wire**Approved by Underwriters' Laboratories, Inc.  
600 Volts**Table YK-3160 (Solid)**  
Construction of Sizes 18-8**Table YK-3260 (Stranded)**  
Construction of Sizes 6 and Larger

Recommended for switchboard and general conduit wiring where flame-proof and moisture-resisting qualities are desired.

Resists flame, heat, moisture, oil, grease, and corrosive vapors. Maximum copper temperature, 110 C. (230 F.).

Insulated with felt asbestos and varnished cambric insert, asbestos braid. Black or white finish.

Available with solid copper or stranded copper conductor.

**Solid Conductor—(Table YK-3160)**

14	7/.0242	.255	2.5	500	36

NOTE. For Type AVA boiler room wire in sizes 6 A.W.G. stranded and larger, use Table YK-2250 power cable.

**Type AVB Deltabeston Switchboard Wire**Approved by Underwriters' Laboratories, Inc.  
600 Volts**Solid Conductor**

Recommended for wiring switchboards and all other types of control apparatus. Approved for 90°C. (194°F.) service.

Will resist heat, flame, oil, and corrosive vapors.

Insulated with varnished cambric and felted asbestos. Overall cotton braid. Dark gray flame-proof finish. Other colors can be furnished upon request.

Available with solid tinned copper conductor or stranded tinned copper conductor.

**Solid Conductor—(Table YK-4161)**

**Deltabeston Range Wire**

(Table YK-6199 Solid)

(Table YK-6299 Stranded)

300 Volts

Meets the requirements of modern range manufacturers.

Consists of copper conductor, cellulose acetate wrap, 0.030-inch felted, impregnated asbestos insulation saturated with a moisture and heat-resistant compound.

Available colors; black, white, blue, yellow, gray, green, and red.

**Solid Conductor—Table YK-6199**

**Deltabeston Appliance Hinge Wire**

300 Volts

(Table YK-6289)

For use in flexible hinges such as are common in conventional waffle irons.

Conductor, extra flexible nickel bunched strands; felted asbestos insulation.

Maximum conductor temperature, 200°C. (392°F.).

Size A.W.G.	18
Stranding	41/34
Bare Wire Diameter	.045 inches
*Diameter	.109 inches
Standard Packages:	
Coils	feet 1000
Metal Spools	feet 2500
Reels	feet 5000

\*Subject to 5 per cent tolerance.

**Deltabeston Appliance Lead Wire**

300 Volts

**Solid Conductor**

MOISTURE-RESISTING INSULATION.—Recommended for wiring of electric ranges, stoves, and other electrical appliances where both heat and moisture resistance is desirable.

Consists of a highly compressed covering of felted asbestos which contains a moisture and heat resistant wax. The insulation is moisture-resisting but will smoke at approximately 300°F. Available with copper or nickel conductors. Nickel conductors are recommended when the conductor temperatures exceed 150°C. (302°F).

Standard colors; black, white, red, gray, or blue.

Can be furnished in a 3-conductor assembly, if desired. A 3-conductor range cable may be found advantageous for wiring heating devices such as electric ranges, ovens, or furnaces where a 3-heat switch controls the heating units.

SMOKELESS INSULATION.—For wiring of electrical appliances where high temperature with a minimum of moisture must be met, and a non-smoking insulation is essential.

Consists of a highly compressed covering of felted purified asbestos which contains less organic material than any other type of electrical insulation. This type is smokeless but will not resist moisture. Available with copper or nickel conductors. Nickel conductors are recommended when the conductor temperatures exceed 150°C. (302°F.).

Available in sizes A.W.G. 8 to 20.

Standard colors; black, white, red, gray, or blue.

Weight per 1000 Feet	16

**Deltabeston Glass-Insulated Lead Wire**

300 Volts

(Tables YK-9101 and YK-9102 Solid)

(Tables YK-9201 and YK-9202 Stranded)

For small motor leads, electrical appliances or control units. Resistant to abrasion and moisture.

Consists of solid or stranded copper or nickel conductors, saturated felt asbestos, varnished glass yarn braid overall.

Maximum conductor temperature, 200°C. (392°F.). Nickel conductors are recommended where conductor temperature exceeds 150°C. (302°F.).

Black or white finish.

\*Subject to  $\pm 5$  per cent tolerance.

**Deltabeston Rheostat Wire**

Approved by Underwriters' Laboratories, Inc.  
600 Volts

**Solid Conductor**

Recommended for wiring rheostats, furnaces, oven connections, and similar installations where subjected to heat, flame, oil, grease, and corrosive vapors. Maximum copper temperature is 200°C. (392°F.).

Insulated with an impregnated wall of purified felted asbestos. Overall asbestos braid, white finish. Black finish can be furnished if required.

Available with solid or stranded copper conductors. The copper conductor is normally plain, however, tinned copper will be furnished if specified.

**Type AF Deltabeston Fixture Wire**

Plain Type — N.E.C. Standard  
300 Volts

This wire is approved for wiring all types of lighting fixtures designed for interior illumination, sun lamps, therapeutic devices, showcase wiring and all types of high-wattage units, especially where socket temperature exceeds 90°C. (194°F.). Flame, heat, and moisture-resisting felted asbestos insulation.

Standard colors: black or white. Other colors available on request at no extra charge in quantities of 1000 feet or more. All based on N.E.M.A. color specifications.

**Deltabeston Thermoplastic Fixture Wire**

Thermoplastic-Insulated—600 Volts

For the wiring of fluorescent lamp ballasts. Resistant to heat, oil, acids, and alkalis.

Standard colors: black, white, red, and green.

Approved by Underwriters' Laboratories for use in fixtures at a maximum operating temperature of 80°C. (176°F.).

**Solid Conductor—(Table YK-7176)**

**Ballast Lead—1000 Volts**

(Table YK-7277)

For wiring ballast leads for Slimline lamps and other fluorescent lighting fixtures that operate at 750 volts a.c.

Thermoplastic compound insulation is resistant to oil, heat, acids, and alkalis. Has additional protection in oil overall lacquered cotton braid.

**Type AVA Deltabeston Mine Locomotive Cable**

600 Volts

**(Table YK-2290)**

For rewiring of mining and industrial locomotives, trolley motor, and resistor leads, where extreme heat is present.

Resists the action of oil, gasoline, acids, and alkalis.

Flexible tinned copper conductor, impregnated felted asbestos varnished cambric, impregnated felted asbestos flame and moisture-resistant asbestos braid.

**Deltabeston Power Cable**

Approved by Underwriters' Laboratories, Inc.  
(Table YK-2250)  
600 Volts

For general power wiring as used in boiler rooms, power plants and steel mills. The cable can be installed exposed or in conduit. Maximum copper temperature, 110°C. (230°F.).

Insulation consists of a layer of felted asbestos, wrapped with varnished cambric, a layer of felted asbestos, and then an asbestos braid. Flame, heat and moisture-resisting saturant and finish. Standard color of finish, black.

**Deltabeston Power Cable**

Approved by Underwriters' Laboratories, Inc.  
(Table YK-2252)  
600 Volts

Recommended for exposed installations with high operating temperature. Will give permanent, uninterrupted service under constant high temperature. Maximum copper temperature 125°C. (257°F.).

Felted asbestos insulation, asbestos braid. Flame, heat and moisture-resisting saturant and finish. Standard color of finish, black.

**Deltabeston Station Control Cable**

Approved by Underwriters' Laboratories, Inc.  
600 Volts

Recommended for connection of control on signal circuits, either exposed or in conduit, where the operating temperature is too severe for other insulations. Maximum copper temperature 110°C. (230°F.).

Each tinned copper conductor insulated with felted asbestos and varnished cambric insert. Overall asbestos braid. Flame, heat and moisture-resisting saturant and finish. Standard color of finish, black.

Standard shipping lengths as specified.

\*Subject to  $\pm 5\%$  tolerance.

**Deltabeston Apparatus or Motor Lead Cable**

Approved by Underwriters' Laboratories, Inc.

(Table YK-2251)

600 Volts

Recommended where flexibility is desired. Used for wiring all low-voltage apparatus in power plants, mine locomotives and any other installation, either exposed or in conduit, where the operating temperature is too severe for other insulations. Maximum copper temperature rating is 110°C. (230°F.). Insulation consists of a layer of felted asbestos, wrapped with varnished cambric felted asbestos, and then an asbestos braid. Standard color of finish, black.

**Deltabeston Boiler Room Wire**

Approved by Underwriters' Laboratories, Inc.

600 Volts

Construction of Sizes 8-18 A.W.G.

Recommended for general conduit and boiler room wiring where heat and moisture-resisting qualities are essential. Typical applications are for lighting and control circuits. Maximum copper temperature, 110°C. (230°F.).

Standard color of finish, black. White also available.

Available in solid or stranded copper conductor.

Standard Shipping Length: size A.W.G. 0000 to 6, in 500-ft. reels; size A.W.G. 8 to 18, in 500-ft. coils and 1000-ft. reels.

**Deltabeston All-Asbestos Apparatus Cable**

Approved by Underwriters' Laboratories, Inc.

300 Volts

Recommended for the wiring of motion picture projectors, stage lights, searchlights, floodlights, spotlights, all types of electric cranes and controllers, and all other apparatus where the wires are subjected to high temperatures. Maximum copper temperature is 200°C. (392°F.).

Insulated with a wall of felted asbestos, finished with an overall asbestos braid. Flame and heat-resisting saturant and finish. Standard color of finish, white.

Available in two grades: flexible, and extra flexible.

### Deltabeston Magnet Wire

#### Asbestos Insulated—Round Wire

All Deltabeston Magnet Wire is interchangeable for replacement of double cotton covered magnet wire, having the same uniform thickness or insulation.

#### Standard Finishes

**STANDARD BROWN W-E.** Flame and heat resisting varnish with a smooth waxy finish.

**STANDARD WHITE.** Bonded white asbestos designed for impregnation after coil is formed when it will absorb any insulating varnish.

**BLACK "A".** Asbestos fibre treated with compound having smooth, waxy finish.

## Deltabeston Magnet Wire

## Square and Rectangular

Square or rectangular magnet wire can be furnished in practically any combination of width and thickness that is usually required in either asbestos or glass insulated, single or double wrapped.

## Square

Enameled conductor furnished in sizes 14 to 4 inclusive only.

Maximum and minimum averages may vary from nominal by not more than 10 per cent.

## Rectangular

The average of any 10 measurements over a 20-foot length must not exceed the maximum or be less than the minimum value.

Standard shipping reels, 150 pounds minimum; 275 pounds maximum net weight.

\*Subject to  $\pm 5$  per cent tolerance.

Roebing Square Magnet Wire  
Double Cotton Covered

Can be furnished in all sizes from No. 14 to No. 4/0 A.W.G. In computing the gage, diameter of round wire is comparable to thickness, bare wire side, of square wire. Circular mil area and weight of square wire is approximately 1.23 times that of round wire of the same diameter as thickness of square wire. Sizes smaller than No. 14 A.W.G. cannot be regularly procured owing to difficulty of winding. Prices upon application.

## Roebing Rectangular Magnet Wire

Rectangular sizes have not, as yet, been standardized but can be supplied in sizes from .500 to .020 inches in thickness and from .500 to .044 inches in width. The regular insulation is double cotton wound.

Rectangular wire is not carried in stock, but made specially on order. Orders should not be for less than 200 pounds of any size. Prices will be quoted upon application.

### Roebing Roeglas Magnet Wire

Roeglas magnet wire, fiberglass yarn insulated, can be furnished in sizes No. 4/0 to 32 inclusive, either single wrap or double wrap. The increase in diameter for the fiberglass insulation on Roeglas magnet wire is slightly less than that given for cotton insulation for the same size conductor and number of serving. Additions in mils for round wire are as follows:

Size A.W.G.	4/0-14	15-20	21-32
Single.....	6	5	4
Double Glass.....	10	8	6

The weights per 1000 feet are approximately the same as for cotton insulated magnet wire.

Standard packages are the same as for cotton insulated magnet wire.

### Crapo Galvanized Telephone and Telegraph Wire

Drawn from iron or steel, of specific properties, processed under laboratory supervision, galvanized by the Crapo process, and rigidly inspected. Meets all standard specifications for electrical conductivity, tensile strength, elongation, galvanizing, and ductility which users of line wire require.

### Crapo Galvanized Tie Wires

Manufactured specially to facilitate tying in telephone line wire. Galvanized by Crapo process.

Furnished in coils or straightened and cut to length.

Standard bundle for horseshoe tie, 25 pounds.

Standard bundle for armor tie, 50 pounds.

Size B.W.G.	STANDARD COILS		STRAIGHTENED AND CUT TO LENGTH			
	Approx. Length Feet	Approx. Weight Pounds	For Horseshoe Tie Length Inches	No. Pieces	For Armor Tie Length Inches	No. Pieces

12	3100	100	14	675	44	430
14	2650	50	14	1150	40	810

### Crapo Galvanized Ground Wire

For pole grounds. Regularly furnished in coils of approximately 150 pounds.

Size B.W.G.	Diameter Inches	Approx. Wt. Lb. per Coil	Approx. Length Feet
6	.203	150	1320
8	.165	150	2030
9	.148	150	2520

### Crapo Galvanized Steel Cable Lashing Wire

Used with modern cable spinning machines to lash cable to messenger strand.

Coils are neatly and compactly wound, tied with easily removed cotton tape, and contain 325 feet of wire, plus or minus 10 feet.

Wire diameter, .091 inch.

Coil dimensions: arbor hole, straight hub, 1 1/8 inches; outside diameter (nominal), 6 inches; width (nominal), 1 1/2 inches.

Packed 6 coils in a carton.

Per Coil, Approximate Weight, 7.2 Pounds.

### Crapo High-Tensile Line Wire

For Long Spans

For Extra Long Spans

These high-tensile, low-resistance telephone line wires make possible longer-span, lower-cost construction on new lines; provide stronger spans, with lower maintenance expense, on present lines. Development of Indiana Steel and Wire Company.

Galvanized by the Crapo process, which produces a heavy, dense, uniform coating of zinc that adheres tenaciously to the wire and provides dependable protection against corrosion.

### Crapo HTL-85

Used extensively for both new construction and for replacement. When used on existing pole structures it tends to increase strength of line, lessens hazard of ice and wind, minimizes service interruptions, and reduces maintenance costs.

Affords improved transmission at voice frequency with currents of voice frequency magnitude.

Has a tensile strength more than 60 per cent greater than standard B.B. wire of the same diameter. No. 12 B.W.G. size makes possible spans of 225 feet in heavy loading, 325 feet in medium loading, and 375 feet in light loading districts.

Furnished in continuous lengths without splices or joints. Galvanized steel compression-type sleeves are recommended for splicing this wire.

COPYRIGHT 1936, 1939, AND 1945 BY INDIANA STEEL & WIRE CO.

### Crapo HTL-135

Possesses two and one-half times the strength of standard B.B. wire, which makes possible spans of 350 feet in heavy loading districts, 450 feet in medium loading districts, and 500 feet in light loading districts.

The average number of pole structures per mile can usually be reduced to approximately one-half the number required for B.B. wire.

The effective resistance at voice frequencies with currents of voice frequency magnitude is superior to that of the older grade.

Regularly furnished in No. 12 B.W.G. and in continuous lengths without splices or joints.

Galvanized steel compression-type sleeves are recommended for splicing.

Size.....	No. 12 B.W.G.

COPYRIGHT 1939 AND 1945 BY INDIANA STEEL & WIRE CO.

## Crapo Galvanized Steel Conductors

A high tensile, low-resistance steel conductor which makes possible long spans, reduces the number of pole structures required, saves man-hours and material, and reduces over-all construction expense.

Used for rural taplines and single-phase extensions, high-tension transmission lines and branches, primary distribution lines, primary circuits; for mixed commercial, residential and farm service, primary neutrals of three-phase rural feeders and series street lighting circuits.

Made by special process from steel of special composition and galvanized.

Available in two grades: Crapo HTC-130 and Crapo HTC-80. Each grade is available in two constructions: stranded (3-wire) and solid. Each construction is available in three sizes: Nos. 4, 6, and 8 B.W.G.

The effective resistance and reactance of Crapo HTC-130 and HTC-80 are shown below. The resistance and reactance values for solid conductors are slightly higher than those for stranded (3-wire) conductors.

**Resistance and Reactance in Ohms per Mile of Single Conductor at 60 Cycles for Various Currents and Conductor Spacings When the Ambient Temperature is 20°C. (68°F.)**

\*Of each conductor of a single, 2, or 3-phase circuit, at stated distances between centers of conductors.

†When specified, stranded conductors can be shipped in coils approximately  $\frac{1}{2}$  or  $\frac{1}{4}$  of the reel lengths shown above. Stranded conductors can also be furnished on reels in lengths approximately  $\frac{1}{2}$  the length shown above.

Values for weights and lengths are approximate.

Crapo Aluminum Cable  
Steel Reinforced  
(ACSR)

Six Aluminum Wires  
Over One of Steel

Seven Aluminum Wires  
Over One of Steel

Crapo ACSR combines the conductivity of aluminum with the tensile strength of steel to provide an efficient, economical conductor suited to the transmission and distribution of power.

The aluminum wires, with their high current-carrying capacity, are stranded around a core of special high tensile steel wire to form a cable light in weight yet high in physical strength.

Crapo ACSR is manufactured to highest industry standards and in accord with established physical and electrical specifications. Each step in the manufacturing process is performed under laboratory control and guidance to insure high uniform quality in the finished product.

Crapo ACSR in sizes 1/0 to 4/0 is regularly furnished on 40-inch reels, each reel containing one length. Sizes 6, 4, and 2 are regularly furnished on 40-inch reels, each containing two lengths. Sizes 6, 4, 2, and 1/0 also can be furnished on 30-inch reels, each reel containing one length, or in coils when specified.

Approximate net weights: A.C.S.R. on 40-inch reel, 1000 pounds; on 30-inch reel, 500 pounds; in coil, 250 pounds.

Crapo Galvanized Tie Wire  
For Steel Conductors

A soft, pliable steel wire developed specially for applying armor ties to steel conductor.

Available in two sizes: Nos. 8 and 10 B.W.G.

Packed in bundles of 50 pounds each.

Conductor Size B.W.G.	LENGTH OF ARMOR TIES, INCHES

## Preformed Armor Rods and Two-Piece Tie Wires

Illustration above shows the rods in process of being applied to the conductor at the support.

Illustration at left shows the armored conductor tied to the insulator with two-piece tie wires.

### Armor Rods

Designed to reinforce and protect overhead conductors and static wires at the point of and in the region of the support.

Minimizes wear and chafing at supports. Reduces possibility of corrosion. Tends to absorb and dissipate vibration.

Acts as an armor over the conductor, protecting it against flash-overs and arcing. Provides excellent holding power against slippage. Installed easily and quickly. Hot-line installations can be made with standard hot-line tools.

Each individual rod is preformed into open helices designed to fit snugly around the conductor. No clips are required to hold the rod in place.

Reinforced conductor can be fastened to the support by conventional methods.

Rods should be ordered with the same pitch as the conductor or strand on which they are to be used.

Made by Indiana Steel & Wire Company from Crapo galvanized spring steel wire manufactured especially for the purpose.

Can be furnished in aluminum, copper, or bronze and in conductor sizes other than listed.

### Two-Piece Tie Wires

Recommended for tying-in the conductor.

The two-piece tie wires are straightened and cut to required lengths from special steel wire galvanized by the Crapo process.

For hot-line tie, use same gage wire as listed. Total length of two tie wires required is 56 inches.

Packed in 50-pound bundles.

## Crapo Galvanized Steel Strand

All wire used in forming a particular size and grade is produced from steel of selected properties, scientifically processed under laboratory supervision and galvanized by the Crapo process. Both wire and strand are subjected to laboratory tests for tensile strength, elongation, galvanizing, ductility, and gage to insure high uniform quality in the finished product.

Furnished in the following standard lengths: 3/4-inch diameter and smaller in 250, 500 and 1000-foot coils and 2500 and 5000-foot reels; 7/8-inch diameter and larger in 250 and 500-foot coils and 1000, 2500 and 5000-foot reels. When ordering specify size and grade, method of packing (coils or reels) and number of feet per coil or reel.

## Appleton Portable Reelites

## Portable Type

660 Watts, 250 Volts

An automatic reeling device for extension light cords. The light is always available within arm's reach and no time is lost in untangling cords or plugging in for new extensions. Each reel has a ratchet stop which works exactly like a window shade. Furnished standard with cover plate which fits over all 3¼ or 4-inch octagonal outlet boxes. Furnished with No. 16 gage, 2 conductor cord.

Light grey enamel finish.

## No. 1509 Vaporproof (Keyless) Type

660 Watts, 250 Volts

Furnished with vaporproof globe and heavy duty wire guard. Will accommodate standard lamps up to and including 60-watt.

Light grey enameled reel-unit, 7¼ inches in diameter,

with ceiling mounting for attaching to standard 3¼ to 4-inch octagonal outlet boxes. Furnished with 20 feet of No. 16, 2 conductor cord; plastic handle; heavy duty wire guard.

Weight per dozen, 144 pounds.

No. 1509...each .....

## Heavy Guard Type

With Half Reflector

660 Watts, 250 Volts

Reelite is supplied with or without switch in handle. Wire guard accommodates up to and including 100-watt lamps. Supplied with 25 ft., No. 16, 2 conductor cord. Reel-unit, 7¼ in. diameter, light grey enameled finish. Has base for attaching to standard 3¼ or 4-in. octagonal outlet boxes; wood handle and heavy duty wire guard.

\*Furnished with No. 18-3 conductor cord, two of which are connected to brushes and third grounded to frame.

## Appleton Portable Reelites

## Rubber Handle Type

With Half Reflector

660 Watts, 250 Volts

Rubber Handle Type

Furnished with or without switch in handle. Also has heavy duty wire guard accommodating lamps up to 100 watts.

Light grey enameled reel-unit 7¼ inches diameter, with base for attaching to 3¼ to 4-inch outlet boxes; 25 feet No. 16-gage, 2 conductor cord, rubber handle.

No.	Each	Type Socket	Wt. Lb. per Doz.

## No. 1518 Battery Lamp Type

660 Watts, 250 Volts

Equipped for 21 or 32cp. 6-8-volt battery lamp to operate off a storage battery. Bulbs not included.

Light grey enameled reel-unit 7¼ inches diameter, with base for attaching to ceiling, or wall of truck; 25 feet No. 16 gage, 2 conductor cord.

Weight per dozen, 96 pounds.  
No. 1518.....each \$13.00

Battery Lamp Type

## No. 1523 Machine Tool Type

660 Watts, 250 Volts

Has a connector body so any portable electrical tool or device can be attached.

Light grey enameled reel-unit 7¼ inches diameter, with base for attaching to 3¼ or 4-inch outlet boxes; 25 feet No. 16 gage, 2 conductor cord.

Weight per dozen, 97 pounds.  
No. 1523.....each \$12.50

Machine Tool Type

## Cloth Cutting Machine Type

660 Watts, 250 Volts

Has swivel cover, light spring tension without ratchet stop. No wiring devices furnished.

Light grey enameled reel-unit with base for attaching to 3¼ or 4-inch outlet boxes.

Supplied with special cambric covered lightweight No. 18 gage, 2 conductor cord.

No.	Each	Diameter Reel, In.	Length Cord, Ft.	Wt. Lb. per Doz.

Cloth Cutting Machine Type

## No. 1535 Cast Base

Used for mounting of portable reelites, base down. Base may be furnished instead of 3¼ or 4-inch outlet plate when specified, at no extra charge. If furnished separately, No. and price must be added.

Light grey enameled finish.  
No. 1535.....each \$7.75

Cast Base

## No. 1538 Wall Bracket

For use with 5½, 7¼ and 10-inch reelites. For wall mounting of portable reelites. May be ordered separately or with reelite.

Light grey enameled finish.

No. 1538.....each \$1.50

Wall Bracket

## Appleton Light Duty Air-Fluid Reels

### Spring Driven Lift Type

#### For Air and Fluid Hose

Used for light duty pneumatic tool, paint spray, and blow gun applications where it is desirable to keep the hose free of kinks and out of the way.

The hose outlet is adjustable and should be so set that the hose does not drag around the rollers when mounted on the wall or ceiling. Furnished complete with 25 feet of durable, 2-braid hose.

If constant tension is unnecessary, reels will be equipped with ratchet device at extra charge. A slight jerk on the hose line allows the hose to be drawn in. Orders must specify if ratchet is desired. Ratchets can be used only with ceiling installations.

## Appleton Industrial Type Aireels

### Spring Driven Lift Type

#### For Air Hose Lines

An open style air reel used automatically to wind and maintain constant tension on air hose lines of portable pneumatic tools.

Can be mounted either on the ceiling or wall. The outlet arm is adjustable. The swivel air joint is positive and self-adjusting.

Complete with 2-braid air hose.

## Type YS Appleton Reelites

### Portable Power for Electric Hoists

Automatic take-up, spring-operated cable reel to furnish power to traveling electric hoists operating on straight or curved tracks.

No exposed current collectors, trolleys or wires. Guarded by extra conductor to prevent electrical mishaps. Simple to maintain, with power spring replaceable through outer spring cover, oilless bearings at all points of rotation and solderless cord connections made to terminal block without dismantling reel.

Furnished with swivel base and Type S cord assembly.

## Appleton Retract-o-Reels

Lightweight cast aluminum balancing reel used for supporting portable tools, air, and electrical devices weighing up to 10 pounds.

Reels support lightweight drills, screwdrivers, and assembly tools directly over production line while operator is otherwise engaged.

Spring tension is adjustable although balance point is set at factory according to weight of tool to be balanced.

The end of the wire rope is furnished with an eye loop made of a swaged-in thimble, permitting

quick tool connection.

The Retract-o-Reel turns on self-lubricated oilless bearings.

Furnished with 6 feet preformed wire rope, rubber bumper, cable clamp, and thimble in swaged eye loop.

### No. A1-B21 Retract-O-Reel Handwheels

Handwheel fits tension adjustment stud on Retract-o-Reel. Affords safe and quick spring tension adjustment for proper balance.

No. A1-B21, Weight, 8 ounces. ... each \$1.50

## Appleton Tandem Retract-o-Reels

### For Balancing Portable Tools

#### Complete Units

A device which may be used in tandem to balance heavier weights by using the special tandem hanger assembly.

Reeling units must be individually adjusted to their rated balancing capacity to permit springs to share the load equally.

Complete with two standard reeling units, hanger assembly, and 6 feet of wire rope.

Weight each, 14 pounds.

### No. B21-A2 Hanger Assemblies Only

Includes hangers, eyebolt assembly, and fastening bolts for coupling any two standard retract-o-reels in tandem.

Weight each, 2 pounds.

No. B21-A2 ..... each \$5.00

### Sticka Black Friction Tape

A popular-priced tape for general use.

Used to protect the splicing compound on a wire joint from abrasion.

Roll contains  $\frac{1}{2}$  pound gross of  $\frac{3}{4}$ -inch tape, length 60 feet to a roll.

Available in  $\frac{1}{4}$ -pound rolls. Special widths furnished packed in foil.

Per Pound..... \$.36

### Victor Black Friction Tape

Protects the splicing compound on wire joints from abrasion.

A high grade tape for outside or inside work.

Roll contains  $\frac{1}{2}$  pound gross of  $\frac{3}{4}$ -inch tape, 67 $\frac{1}{2}$  feet to a roll.

Also furnished in rolls 2 inches wide, 67 $\frac{1}{2}$  feet per roll, for repairing lead-covered telephone cables. Approximate weight per 2-inch roll in foil, 19 $\frac{1}{4}$  ounces.

Available in  $\frac{1}{4}$ -pound rolls. Special widths furnished packed in foil.

Per Pound..... \$.38

### Amazon A.S.T.M. Black Friction Tape

Highest quality friction tape to meet the most strict specifications.

Roll contains  $\frac{1}{2}$  pound gross of  $\frac{3}{4}$ -inch tape, which is 82 $\frac{1}{2}$  feet to a roll.

Available in  $\frac{1}{4}$ -pound rolls. Special widths furnished packed in foil.

Per Pound..... \$.40

### Manson Friction Tape

Made with new rubber which thoroughly impregnates and coats the strong, closely woven cotton fabric. Black. Has true adhesive, aging and weathering qualities. Provides lasting protection for joint.

Roll contains 78 feet,  $\frac{3}{4}$  inch wide. Put up in  $\frac{1}{2}$  pound cans.

Per Pound..... \$.99

### Okonite Rubber Tape

Compounded only from new Up-River fine Para rubber. When wrapped on the joint, it fuses into a homogeneous wall of tough insulation that is impervious to moisture and stays elastic and resilient. Insures highest electrical strength and permanence. Roll  $\frac{3}{4}$ -inch wide contains 30 ft.

In  $\frac{1}{2}$ -Pound Cans..... per pound \$1.16

### Hydro-Proof Tape

A waterproof tape with an average dielectric strength per layer of 1850 volts.

Width,  $\frac{3}{4}$  inch.

Packed 24 yards per 8-ounce roll.

Per Pound..... \$1.00

### Amazon A.S.T.M. Splicing Compound (Rubber Tape)

Designed for the severest kind of service. Meets the A.S.T.M. and A.R.A. specifications as well as U.S. Navy specification 17-T-1d.

Because of the high percentage of pure plantation rubber this tape is extremely elastic. Will amalgamate into a solid tube to make a watertight joint.

Will withstand dielectric test of at least 350 volts per mil of thickness.

Roll contains  $\frac{1}{2}$ -pound gross of  $\frac{3}{4}$ -inch No. 8 tape; length, 30 feet. Also available in  $\frac{1}{4}$ -pound rolls. Special widths packed in foil only.

Per Pound..... \$.49

### Victor Splicing Compound (Rubber Tape)

This tape is second in quality only to Amazon.

It is designed primarily for ordinary service. Its performance has more than justified the high recommendation which has been given to it.

Will withstand a dielectric test of 300 volts per mil of thickness.

Roll contains  $\frac{1}{2}$ -pound gross of  $\frac{3}{4}$ -inch No. 8 tape; length, 21 feet. Also available in  $\frac{1}{4}$ -pound rolls. Special widths packed in foil only.

Per Pound..... \$.40

### Ruberoid Insulating Tape

A black tape which will not vulcanize with heat or become defective by exposure or use, will not dry and crack or harden; water, acid and alkali-proof.

Furnished in  $\frac{1}{2}$ -lb. rolls  $\frac{3}{4}$  in. wide. Per Pound..... \$.75

Other widths made to order.

### Ideal Acid Core Solder

Metal virgin tin and lead—no scrap metals used. A superior liquid soldering acid flux. Size of solder approximately No. 8 standard gage.

Put up in spools only of 1, 5, and 20 pounds each.

Prices upon application.

### Gem Rosin Core Solder

Metals virgin tin and lead—no scrap metals used. Rosin flux. Size of solder approximately .093 inch standard gage.

Put up in spools of 1, 5, and 20 pounds each.

Prices upon application.

## Kester Plastic Rosin-Filled Solder

For Electrical and Radio Work

With plastic rosin flux, non-corrosive and electrically non-conductive.

The flux flows, as the solder melts, in just the right amounts for a perfect soldering job.

Requires only heat.

Standard size,  $\frac{3}{32}$  inch, about 50 feet to the pound.

Size Spool.....pounds    1    5    20  
Each.....

## Kester Acid-Filled Solder

For General Soldering

Easy to use, saves time, and is dependable for a permanent bond.

Contains a scientifically prepared flux that flows in just the right proportions as the solder melts. Requires only heat.

Standard size,  $\frac{1}{8}$  inch, about 25 feet to the pound.

1-Pound Carton.....each  
1-Pound Spool.....each  
5-Pound Spool.....each  
20-Pound Spool.....each

## Nokorode Core Solder

Ready for instant use; can be used for all kinds of soldering. Will replace acid or resin core solder.

Made of pure virgin tin and lead, with the proper amount of flux to a given amount of solder. Works quickly and leaves a strong, permanent soldered joint.

Nokorode Core Solder is so combined that the flux is in a solid form, care being taken that all parts of the solder contain flux. When heat is applied, the flux does not run out and leave parts of the solder that must be thrown away.

Put up in  $\frac{1}{2}$ -ounce packages, 1, 5 and 20-pound spools.

Prices upon application.

## Bar Solder

An alloy of tin and lead, made up in the form of bars for convenience in handling, for making soldered joints in metals, such as lead piping systems, for cable splices and other heavy work.

Price, Solder in Regular Bars.....per pound \$1.00

## Allen Aluminum Solder

Complete solder and flux combined. Requires only heat to permanently join aluminum to itself or other metals.

Bars and wire, packed 6 pounds to carton.  
 $\frac{1}{4}$ -Pound Bars.....per pound \$2.00  
1-Pound Bars.....per pound 1.50  
Wire  $\frac{1}{8}$ -Inch, 11-Gage, Square.....per pound 2.20

## Unique Formed Flexible Wiping Cloths

The permanent curved wiping surface of the formed finishing cloths produces perfectly symmetrical joints, uniform and smoothly finished. No waste of time or no wear on cloths in breaking in. Used successfully on first joint. Solder will not stick to the smooth slick surface. Gives twice the actual service of old style shapeless wiping cloth.

Add for moleskin: Formed cloths, 10 cents; flat catch cloths, 20 cents.

### Ticking, Formed Finish

Size.....in.	2x2	2 $\frac{1}{2}$ x2 $\frac{1}{2}$	3x3	3 $\frac{1}{2}$ x3 $\frac{1}{2}$	4x4

Hole.....in.	1	1 $\frac{3}{4}$	2 $\frac{3}{4}$	3 $\frac{3}{4}$	6

## Nokorode Soldering Fluid

Eliminates the use of corrosive soldering acid.

Ready for instant use.

Solution is strong. May be cut with water for light work.

Size Container.....gallon	1	5	55
Per Gallon.....	\$1.50	1.10	.70

## Allen Neutral Rosin Fluid Flux

Flux of absolute safety for electric motors, telephone, radio, commutators, instrument work, fine wires, etc.

Can be spilled on the work and allowed to remain with no corrosion hazard to finest wire or metals.

Absolutely neutral and moisture free and non-conductive to electrical current.

Size Can or Bottle.....	1 Quart	1 Gallon
Each.....	\$ .85	3.00
No. in Carton.....	3	1

## Allen Soldering Sticks

An economical rapid flux. Just a touch to the hot metal does the work.

Fuses the solder rapidly without fuss, muss or after corrosion. Size, 1x5 $\frac{1}{4}$  inches.

Samson Formula.....each	\$1.15
Standard Formula.....each	.30

### No. 2774 McGill Star and Crescent Soldering Sticks

Each stick is tinfoil wrapped and packed in pasteboard tube with cap ends. Weight per 100 sticks, 22 pounds. No. 2774.....each \$ .25

### Doe Plug Burnishing Paste

For polishing telephone plugs, radio connections, signal systems, and electrical contacts of all kinds.

Non-corrosive. Chemically neutral.

Packed in 2-ounce tin containers.

Per Can.....

### Doe Commutator Burnishing Paste

For cleaning and polishing commutators and slip rings on motors and generators.

Eliminates noise and sparking.

Acts as a lubricant to eliminate undue wear.

Non-corrosive. Chemically neutral.

Packed in 2-ounce tin container.

Per Can.....

## Mueller Universal Test Clips and Insulators

No. 24-A Clip Only

No. 45 Clip with  
No. 47 Insulator

Tests clips save time in electrical work requiring quick temporary connections. May be used over and over again. Flexible insulators are a convenient protection against electric shock and prevent clips from shorting on each other. Furnished half red and half black to indicate polarity. Packed 10 to a box and 10 boxes to a carton.

## Mueller Crocodile Clips and Rubber Insulators

No. 85 Clip with  
No. 87 Insulator

**No. 85 Clips**  
Cadmium plated, 5-ampere clip for radio and electrical test work. Long thin nose on clip enables user to make tests in deep recesses. Teeth mesh along entire length of jaw. May be completely insulated. Jaw spread, 3/8 inch.

Packed 10 in box; 100 in carton, weight, 1 1/2 pounds.

No. 85.....each \$.07

### No. 85-C Frequency Test Clips

Phosphor bronze spring and brass screw. Will not heat up due to hysteresis effect. Used on radio transmitting apparatus and electrotherapeutical work.

Packed 10 per box; 100 per carton, weight, 2 pounds.

No. 85-C.....each \$.10

### No. 85-T Tip Clips

Same as No. 85 except that it has a standard phone tip soldered to the front end of the lower jaw. Can be used as a combination test clip and test prod; also for making connections to binding posts having insulated, non-removable heads. Jaw spread, 3/8 inch.

Packed 10 in box; 100 in carton, weight, 1 1/2 pounds.

No. 85-T.....each \$.14

### No. 87 Insulators

For use with both of the above clips. Packed 10 in box, 5 red and 5 black; 100 in carton, weight, 1 pound.

No. 87.....each \$.08

## Mueller Wee-Pee-Wee Clips and Insulators

No. 88 clip with No. 93-P plastic insulator is used in fine electrical and telephone test work.

Clip is made entirely of phosphor bronze. Extremely small and flat jaws with 1/4-inch spread.

Packed 10 in box; 100 in carton, weight, 3/4 pound.

No. 88, Clip.....each \$.15

No. 93-P, Insulator.....each .05

## Mueller Alligator Test Clips

No. 60-S

No. 60-HS

For use in making quick, temporary electrical connections. Has slim jaws, fine meshing teeth, round thumb grip, and barrel connection for banana plug. Bright finish.

No.	Each	Description	Length Inches
60	\$.06	Steel, with Soldering Lip.....	2

60-CHS	.13	Copper, Otherwise Same as No. 60-HS.	2 1/4

## Reliable Testing Clips

For temporary connections to insulated wires. Made of heavy nickel silver with hard sharp insulation puncturing points and perfectly registering teeth

No. 1

Fitted with screw, nut spike, and washer for attaching to instrument cord.

No. 1.....each \$.16

No. 2

Same as No. 1 but with screw, nut and washer omitted. Preferred where connection to cord is to be soldered.

No. 2.....each \$.16

No. 3

Same as No. 1 but without the spike

No. 3.....each \$.16

No. 5

A light, sturdy clip with a strong spring. Convenient for temporary connections in radio, telephone and signal work.

Particularly good for congested telephone equipment.

Plenty of room for soldering flat cord terminals.

No. 5.....each \$.13

## Bryant Bakelite Flat Cord Connectors

10 Amperes, 125 Volts; 5 Amperes, 250 Volts

These devices do not have standard prong spacings.

Have 1/2-inch cord hole.

No. 2956

No. 2958

### No. 2956 Receptacle Portion

For use with No. 2958 only.

Cat. No.	Per 100	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2956	\$36.00	10	100	4

### No. 2958 Plug Portion

For use with No. 2956 only.

Cat. No.	Per 100	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2958	\$36.00	10	100	5

## Morse Eureka Cord Connectors

Made of hard rubber, with acorn or straight side composition cap.

Polarized at no extra charge.

No. 166A is available in all bakelite.

No. ....	166A	166	167
Per 100 .....	\$ .75	.67	.73
Diameter.....inches	1/2	5/8	3/4
Overall Length.....inches	2 1/2	2 1/2	2 1/2

## Morse Eureka Cord Connectors

Made of hard rubber.  
Bakelite cap.

No. ....	116	117	118
Per 100 .....	\$ .62	.55	.64
Diameter.....inches	1/2	5/8	3/4

## No. 167B Morse Eureka Cord Connectors

Made of bakelite, with acorn or straight side cap.

Has brass binding screws; and split male stems.

Diameter, 1 1/16 inch. Overall length, 2 1/2 inches.

No. 167B.....each \$ .77

## Morse Eureka Plug Receptacles

Made of hard rubber, with acorn or straight side cap. Can be furnished in bakelite at additional charge.

Nickel plated flange.

Polarized at no extra charge.

## No. 169

Diameters.....inches	1/2	5/8	3/4
No. 169.....each	\$ .76	.76	.76

## No. 2366

Male in flanged section. Furnished in 5/8-inch diameter only.

No. 2366.....each \$ .75

Ideal \*Wire—Nuts  
Solderless—Tapeless Wire Connectors

Replaces solder and tape, plug connections, terminal blocks, binding posts, etc.

Listed by Underwriters' and Factory

Mutual Laboratories. Recommended by National Electrical Code.

Making a joint with an Ideal Connector is just like screwing a nut on a bolt. The connector simply screws on giving a positive and permanent contact. Spiral metal insert which acts as a current carrying sleeve, presses threads into the wires and binds them together in a vise-like grip—assuring a doubly secure joint.

## No. 72 Fixture-Appliance Type

No.	Description	Per 100	Per 1000
72	For fixture wiring, joints in appliances, etc. Solid or Stranded.....	\$1.65	\$14.71

## No. 73 Junior Universal Type

No.	Description	Per 100	Per 1000
73	For fixture wiring, joints in shallow canopies, signs, etc. For Nos. 14, 16, and 18 up to 2 No. 14 and 2 No. 18 or 4 No. 16 or 5 No. 18 Wires, Solid or Stranded.....	\$1.77	\$15.89

For larger gage wires or where a large number of small wires are to be joined.

No.	Description	Per 100	Per 1000
76	For Nos. 10, 12, 14, 16 and 18 up to 3 No. 10 and 1 No. 18, 6 No. 14 and 1 No. 18, or 4 No. 12 and 1 No. 18 Solid or Stranded.....	\$3.24	\$30.59

\*Trade Mark Reg. U. S. Pat. Office.

## Ideal Porcelain Wire Nuts

## Solderless—Tapeless Wire Connectors

Makes excellent wire joints—fast—at low cost. Ideal for roughing-in and fixture hanging. Joint is strong mechanically, and efficient electrically.

Easy to use—simply strip wire and screw on.

Made in one-piece, high-grade gray porcelain.

Approved by Underwriters' Laboratories, Inc., and Factory Mutual Laboratories.

Packed 100 in a carton.

No. G-3 size joins 2, 3, or 4 No. 18; 1 No. 14, and 1 No. 18

No. G-5 size joins 2, 3, or 4 No. 14; 2 No. 12.

No. ....	G-3	G-5
Per 100 .....	\$ .86	.95
Weight per 1000.....pounds	12	16

## No. 501 Sherman Fixture Connectors

Made of heavy bronze. Has two heavy non-removable headed screws. The Sherman Fixture Connector cannot rust and assures high conductivity.

Will connect all wires up to No. 12 with a maximum of two No. 12 solid or three No. 14 in either end.

Packed in small containers, insuring neat shelf stock and safe deliveries.

Carton, 100 each. Standard package, 500. Standard package weight, 12 pounds. Weight, per 1000, 25 pounds.

No. 501.....per 100 \$10.00

## Sherman Soldering Lugs

Seamless all around. Solder cannot leak out at the closed end. Round end lugs in small sizes are recommended.

Approved and listed by the Underwriters' Laboratories.

\*Furnished square end unless specified round.

†Furnished with 3/8 or 13/32-inch stud hole at no extra charge.

## Sherman Heavy Duty Soldering Lugs

## N.E.L.A. Standard

Made of best quality seamless copper tubing.

Lugs Nos. 8, 8-A, 9-A, 10 and 11 have a sufficient socket diameter to take rope core cables of sizes listed without removing core. Core can be drilled out and space filled with copper plug or solder.

Blank lugs furnished when specified; otherwise regular bolt holes as listed. Special drilling may be had at extra cost if specified. Straight lugs regularly furnished. Angle lugs 45 and 90-degree when specified at extra price. Plain finish unless otherwise specified. Special finishes as follows at added prices: Rosin dipped, cadmium plated, tinned inside only and tinned all over. Special dimensions may be made to order with dimension E other than regular or special drilling of stud holes, at added cost.

## T&B Wedge-On Joints

PATENTED

Approved by Underwriters' Laboratories

For joining small wires and making permanent splices quickly without use of solder. Installed with same tool used for Wedge-On lugs and splicers.

WIRE SIZE No. Min.	Max.	No.	Per 100	Car- ton	Std. Pkg.	Wt. Lb. per 100
*14	14	Q-4	\$12.00	100	200	1 3/4
†14	14	Q-5	12.00	100	200	2 1/2

\*Will take wire combinations from 2 No. 14 through 4 No. 14, 3 No. 12, or 2 No. 10.

†Will take wire combinations from 4 No. 14 through 7 No. 14, 5 No. 12 or 3 No. 10.

## T&B Wedge-On Tools

Designed for use with T&B Wedge-On Lugs, Splicers and Joints.

The Wedge-On tool drives the wedge home in a single operation. The pressure per square inch exerted on the wire is several hundred times the pressure applied on the tool, due to the slight taper of the wedge. The serrations inside the wedge provide maximum contact and gripping area.

Packed 1 in a standard package.

Weight, 1 1/2 pounds.

No.	Green Handle	Red Handle	Blue Handle

## T&amp;B Sta-Kon Hand Tools

No. WT-111M

No. WT-115

Used to install Sta-Kon terminals. Every tool accommodates several sizes of terminals and tips. Standard package, 1.

No. WT-111M \$5.00 WT-115 31.00 21076 35.00

For Use on Wire Nos. 22 to 0 8 to 1 2, 1, 1/0, 0, 2/0, 3/0 4/0, 250M CM

Color of Handle..... Red Black Grey

Weight..... pounds ¾ 4½ 5

## No. WT-116 Holders

For Nos. WT-115 or 21076 tools for bench mounting. Standard package, 1.

No. WT-116, Weight, 2½ Pounds.....each \$2.00

Power tools for rapid high production installations are also available. Information on request.

## No. 20 T&amp;B Sta-Kon Terminal Kits

Designed for work on electric wires No. 22 to 10 inclusive.

## Contents

One box of 100 terminals for wire sizes Nos. 22 to 18, to fit No. 8 or 10 bolt.

One box of 100 terminals for wire size Nos. 16 to 14, to fit No. 8 or 10 bolt.

One box of 50 terminals for wire size Nos. 12 to 10, to fit No. 8 or 10 bolt. One installing tool.

No. 20.....each \$10.00

## T&amp;B Sta-Kon Disconnect Splices

Listed by Underwriters' Laboratories

A quick connect and disconnect splice which employs the Sta-Kon method of terminating the wires to splicer tips, providing an electrical joint which can be made and unmade innumerable times.

Complies with Army Air Corps and Navy Department Bureau of Aeronautics resistance requirements.

Male tips are identical, and when assembled to center section are in wiping contact with each other under constant pressure of beryllium copper center unit.

Prices and complete information on request.

## T&amp;B Lug-Its

Approved by Underwriters' Laboratories, Inc.

For stranded or solid wire. Double thickness at thread gives double thread strength and locking action.

Serrated copper tongue gives high conductivity.

Bronze body provides strength.

All parts are electro-tinned for enduring contact.

Bodies may be purchased separately for assembly to equipment as a "built-in" unit.

WIRE SIZE		No.	Each	Bolt Hole Size In.	Lgth. In.	Width In.	Car- ton	Std. Pkg.	Wt. Lb. per 1000

## T&amp;B Type PC Parallel Connectors

For Solid or Stranded Wire

Approved by Underwriters' Laboratories

For connecting ends of solid or stranded wire. Can be used for connections of service runs to drops, at motor outlets, for splicing wire in cabinets, etc.

Screw cannot touch the wire. Built-in contact shield is curved and corrugated for maximum conductivity and strength.

WIRE SIZE Min.	Max.	No.	Per 100	Width Inches	Height of Body Inches	Thick- ness Inches	Std. Pkg.

## T&amp;B Tite-Bind Lugs

Approved by Underwriters' Laboratories

Precision-made for one size cable for each size lug.

Tapered cone construction insures perfect, permanent contact.

Easily installed with only a wrench.

All lugs are designed to take stranded cable unless otherwise noted.

## One-Bolt Hole

Cable Size No.	No.	Each	Cable Size MCM	No.	Each
8	22122	\$ .40	350	22148	\$2.40

300	22147	1.90	....	.....	.....

Table lists popular sizes. Many other 1-bolt and 2-bolt lugs are available upon order.

## T&amp;B Tite-Bind Connectors

Approved by Underwriters' Laboratories

Two-Way

Three-Way

**Two-Way** connectors are available in the same range of cable sizes as Tite-Bind lugs listed above.

**Three-Way** connectors are available in the same range of cable sizes as Tite-Bind lugs listed above. Can also be furnished in any combination of sizes.

## T&amp;B Hinjon Junior Tee-Parallel Tap-In-One

Approved by Underwriters' Laboratories

Will take any type wire, cable, or tubing that will go into the fitting.

Installation consists of skinning the main, inserting the branch and tightening. Tightening locks the threads; vibration-proof.

Made of high conductivity bronze.

**CONNECTORS**  
We can supply Connectors  
for  
Aluminum Conductors

## T&B Lock-Tite Lugs

Approved by Underwriters' Laboratories

Fits any kind of cable—solid, flexible, stranded hemp-core, etc. Easily installed with key wrench. Resists vibration because it is locked tight. Has a sturdy, overlapping cable-shield which nests inside an oval-shaped recess in the body.

A shake-proof locking disc, built into the cable shield, assures permanent tightness.

### Single Bolt Hole

Cable Size No.	Lug No.	Each	Key Wrench No.	Each
4-1	31007	\$ .70	30	\$ .20
1-2/0	31009	1.10	30	.20

750-1000M CM	31019	5.80	50	.30

## T&B Lock-Tite Stud Connectors

Suitable for all types of connections, from cable to flat bus, or to any device with a drilled hole.

Also used for current transformer installations, and for attaching ground to steel transmission towers.

## T&B Lock-Tite Tee-Parallel Taps

Approved by Underwriters' Laboratories

Will do the work of 264 conventional type tee and parallel taps. Takes any type wire within its range as well as round or tubular bus of equivalent diameters. Body sizes open wide to allow easiest imaginable assembly to main and branch.

One-piece; no detachable parts.

Can be used in any position: the branch can be run above, below or alongside the main on a parallel job; above, or below the main on a tee job, by swinging the tap to desired position.

## T&B Disconnect Hangers

10 Amperes, 250 Volts

Listed Under Reexamination Service of Underwriters' Laboratories

Provides a safety disconnect for light and power circuits. Can be used with other types of industrial lighting fixtures.

Made of tough malleable iron. Each hanger consists of a locking hook with a polarized receptacle and a bushed loop. Supports the fixture or pendent outlet and cannot be unhooked until the plug is out and the fixture dead. The plug closes the hook so the loop cannot be removed while the plug is in place.

To unhook for either cleaning the fixture or replacing burnt out bulbs, simply pull out plug and lift the loop over the open hook.

Loops have standard female threads. Are easily transformed to the same size male threads by use of close nipple. The male threads on the locking hooks can be converted to female thread by use of a standard conduit coupling.

### Disconnect Hangers

## O.Z. Type XLH Solderless Combination Lugs

Cast copper alloy fitting made so high clamping pressure is exerted by pressure plate insuring high conductivity.

Available with socket set-screws at same price.

### O.Z. Type XTP Combination Parallel & T Connectors

Used as either a T or parallel tap, designed to take a wide range of wire sizes on main or tap. One-piece construction eliminates detachable parts and permits easy assembly. Castings are of high conductive copper alloy. Connection with main feeder line is made by closing hinge over cable.

### O.Z. Type PC Parallel Cable Clamps

Used for connecting parallel wire.

Made of high copper alloy, insuring high conductivity and corrosion resistance.

High bolting pressure is exerted by Everdur bolts, nuts and lock washers.

Sizes other than listed available upon request.

## O. Z. Power Connectors

Type UM

Type UA

Type KTC

**HEX-CUP** construction makes these fittings easy to install as only one tool is required for installation.

Prices on the types illustrated and on types HT, UT, HW, HM, KM, HL, UA, UE, UWT, and UWX are furnished upon request.

Type HL

Type KT

Type UW

## O.Z. Bronze Bus Bar Clamps

Type AC

Type HC

Both halves are made of bronze. Bolts are made of Everdur alloy.

Sizes other than listed are available upon request.

### Superior Standard Insulated Staples For Low Voltage Wiring

#### 100 Size—For Industrial and Telephone Use

Coppered insulated staples packed 100 to the box, 1000 to the container, 25 boxes to the standard carton.

Nos. 1, 3, or 5.....	per 1000	\$1.90
Nos. 6 or 7.....	per 1000	2.00

#### 50 Size—For Commercial and Household Use

Coppered insulated staples packed 50 to a box, 1000 to a container, 25 boxes to the standard carton.

Furnished in red-white-blue cellophane window boxes.

Nos. 1, 3, or 5.....	per 1000	\$2.00
----------------------	----------	--------

#### 40 Size—For Commercial and Home Use

Colored insulated staples packed 40 to the box, 1000 to the container, 25 boxes to the standard carton.

the container, 25 boxes to the standard carton.  
Available in white, brown, or ivory finish.  
Furnished in display cartons with cellophane window boxes.  
Nos. 1, 3, or 5.....per 1000 \$2.50  
Add 12 cents to prices for white finish.

### Superior Strip-Insulated Staples

Designed for use where special packaging is required in kits which are sold by manufacturers of thermostat, radio, and electronic equipment.

Made in strips of 10 staples.

#### 100 Size—For Telephone and Industrial Use

Coppered insulated staples packed 100 to the box, 1000 to the container, and 25 boxes to the standard carton.

Furnished in sizes No. 1 or 3.		
Nos. 1 or 3, Packed in containers.....	per 1000	\$3.50
Nos. 1 or 3, Packed in Bulk .....	per 1000	3.00

#### 40 Size—For Commercial and Home Use

Available in brown, ivory, and white.

Packed 40 to the open-face box, 1000 to the container 25 boxes to the standard carton.

Furnished in sizes No. 1 or 3.	
Nos. 1 or 3.....	per 1000 \$5.00
Add 12 cents to prices for white finish.	

### No. F4 Superior Insulated Fiber Washer Telephone Wiring Nails

Made in sizes of  $\frac{1}{2}$  and  $\frac{7}{8}$ -inch.

Available in white, brown, and ivory.

Packed 100 size.

No. F4.....per 1000 \$4.24

### No. F5 Superior Plastic Wiring Nails

Insures permanent installation, permanent color, and a secure grip on all inside wiring including synthetic wire.

Made in sizes of  $\frac{1}{2}$  and  $\frac{7}{8}$ -inch.

Available in white, brown, and ivory.

Packed 100 to the box, 10 boxes to a container, and 25 containers in a shipping carton, which totals 25,000 nails. Shipping weight per carton, 30 pounds.

No. F5.....per 1000 \$7.10

### Superior All Steel Metal Wiring Nails

For inside and outside low voltage electrical wiring. Made in sizes of  $\frac{1}{2}$  and  $\frac{7}{8}$ -inch.

Available in olive drab, brown, ivory, and white.

Packed 100 size, 1000 to the container, 25,000 to the standard carton.

No. IW9,  $\frac{1}{2}$ -Inch.....per 1000 \$3.50

No. IW10,  $\frac{7}{8}$ -Inch.....per 1000 3.50

Add 12 cents per 1000 to prices for white finish.

### No. 18 Superior Fiber Head Wiring and Upholstering Nails

Made in sizes of  $\frac{5}{8}$  and  $\frac{7}{8}$ -inch.

Available in white, brown, and green finish.

Packed either 100 size (1000 to the container) or 1000 size.

Add 12 cents to above for white finish.

No. 18, Packed 1000 Size.....per 1000 \$2.60

No. 18, Packed 100 Size.....per 1000 2.84

### Brady Quik-Label Wire Markers

Used for marking electrical wires.

Self-adhesive feature makes labels stick without moistening. Labels come in rows on handy cards.

Plastic coated for resistance to dirt, oil, fumes, water, weather, abrasion, and handling.

Have high dielectric strength, preventing shorts. Will not creep, lift, break, chip, slur or fall off wire.

Available in 400 standard N.E.M.A. electrical symbols, including 15 colors. Symbols are always visible with the wire in any position as the label goes all around the wire.

Labels are  $1\frac{1}{2}$  inches long and can be cut horizontally through the middle for small diameter wires to provide individual  $\frac{3}{4}$ -inch labels.

Features a self-starter strip, which partly peels each label automatically.

Write for complete list of cards and prices.

### Steel City Universal Insulator Supports

Nos. 500, 501,  
502 and 503

Nos. 505 and 506

This support is for use where lines are to be run along steel girders, under roofs, or where cramped quarters will not permit nailing up insulators.

Malleable iron; cadmium-plated, electro galvanized or

sherardized, with cupped steel set screws. Prices include leather washers. Standard tapped as listed but can be tapped as specified at no extra cost.

No.	Per 100	Standard Tapping	Size In.	Jaw Open. In.	Std. Pkg.	Approx. Wt., Lb. per 100

## Efficiency Bushing Racks and Supports

### Type B Bushing Racks

2, 3, 4, 5, and 6-Bushing Racks  
Bottom Illustration Shows Rack Mounted on Triple Adjustable Support

The same type cable support is used as in Type U, in which a single bolt is required to support the bushing and at the same time clamp the bushing support to the rack. Available with or without single or double adjustable beam supports, for a.c. or d.c. service, in sizes to fit  $\frac{5}{16}$  to  $2\frac{3}{8}$ -inch wire sizes.

### Bushing Supports

Type G

Type VB

**Type G.** Adjustable to any angle and eliminates drilling of holes for mounting. A.c. or d.c. service in sizes to fit  $\frac{5}{16}$  to  $2\frac{3}{8}$ -inch cable. A.c. service furnished with brass half.

**Type VB.** Mounted tight with one bolt, the circular base permits adjustment to any angle. Only one bolt required to hold porcelain bushing and clamp to base. Made of high grade malleable iron with highest quality split porcelain bushings. For a.c. or d.c. service in sizes to fit  $\frac{5}{16}$  to  $2\frac{3}{8}$ -inch wire sizes.

### Type GM Bushing Messenger Supports

Designed to suspend wire or cable from messengers where beam mounting is impossible.

Combination of Type G bushing support with strip steel messenger attachment.

Furnished complete as shown, for a.c. or d.c. service, to fit  $\frac{5}{16}$  to  $2\frac{3}{8}$ -inch wire sizes.

## Efficiency Cleat Racks

Base of the cleat is permanently mounted with one bolt, forming a solid support for the wire or cable. The cap is then inserted and bolted down. Supplied with or without adjustable beam supports, for a.c. or d.c. service, in sizes to fit  $\frac{5}{16}$  to  $2\frac{3}{8}$ -inch wire sizes, in 2, 3, 4, 5, 6-cleat type and 3-phase cleat rack.

## Type F Efficiency Conduit Hangers

Used for open steel construction to carry armored cable and  $\frac{1}{2}$  to  $2\frac{1}{2}$ -inch pipe. Patented radiating ridges and 5-point gripping surface keep the pipe suspended dead center with the set screw above permitting the pipe to be carried securely at any angle to the beam. Also used for carrying gas, water and air lines. Made of highest quality malleable iron.

## Efficiency Conductor Racks

Provides a quick, compact method of temporarily or permanently suspending cables of one size or varied sizes—and additional cables can be added as required. Types for a.c. and d.c. service. Only one bolt required for mounting cable. Can be used where space is limited. Will not loosen

from jar or building vibration. Extra large, extra heavy vitreous porcelain bushings. Will not injure cable insulation. For a.c. service, a brass half bushing support is furnished.

### Type U Nested Conductor Racks

2-Conductor Bushing Rack

Simple, compact, scientifically designed to carry conductors equidistant from center to center.

3-Conductor Bushing Rack

One bolt supports the bushing and clamps the bushing support to the frame.

4 and 5-Conductor Bushing Racks

Each clamp is a separate unit—allowing independent installation of each cable line.

Rack and bushing supports patented.

6-Conductor Bushing Rack

Approved and in constant use by many of the largest industrial plants. Relieves impedance.

Available in sizes to fit  $\frac{5}{16}$  to  $2\frac{3}{8}$ -inch wire sizes.

## Efficiency Hangers

### 2 or 3-Wire Cleat Mounting

This fitting is furnished complete with No. 150 adjustable support; malleable iron cleat fitting, 2 or 3-wire glazed porcelain cleats and all bolts furnished.

## Type CHS Cable Strain Clamps

Provides a powerful grip that prevents cable from slipping.

Cast of malleable iron "H" construction, with a high ridge across the center of the cable channel and a U-bolt at each end.

Slipped over cable as illustrated, with U-bolts tightened, it locks cable safely and securely over middle hump without strain or damage. Stands a direct pull of over 12,500 pounds before slipping. For a.c. or d.c. service.

Takes cable from 1/0 to 1,500,000 c.m. Furnished in 3 clamp sizes which cover all cable sizes.

Available either with eye or clevis.

## Adjustable Insulator Supports

Designed to carry insulators and fittings at any angle—above or below the beam. Several conductors or any combination of wires or cables can be used by the addition of various fittings which can be attached anywhere within a 120° radius from vertical position. Eliminates the need for drilling or burning holes in beams or angles. Supports can be used and re-used indefinitely. Height sizes,  $2\frac{1}{8}$ , 3, 4 and  $4\frac{1}{4}$  inches.

## Type K Efficiency Non-Adjustable Supports

Used for supporting porcelain and glass insulators to beams and angles in open steel construction. Made of high quality malleable iron. The head is threaded to receive a case hardened cup point set screw which imbeds into the beam when tightened. Fittings are attached with standard machine screws, through ready-threaded holes with a reinforced section. Available in sizes 1,  $1\frac{1}{2}$ , 2 and  $2\frac{1}{2}$  inches.

National Rigid Steel Conduit  
Enameled Conduit

Enameled conduit is manufactured from mild drawn steel tubing. Before enameling, the tubing is thoroughly cleaned and freed from dirt, grease, scale, silicates and burrs. This process leaves clean surface for the application of the compound.

Shearaduct

Sheraduct rigid conduit is made of full weight mild spellerized steel tube and finished under the famous sherardizing process. In this process pure zinc is alloyed with the steel tube both inside and outside to form a rustproof finish which is so entirely a part of the pipe that it cannot be knocked or chipped off.

In ordering, specify finish desired.

Fretz-Moon Easy-Bending Steel Conduit

High quality rigid steel raceway made from soft, ductile steel. Produced by the continuous weld process which assures welds that are sound, smooth, and strong. Welds will not open even under severe abuse.

Free from burnt or hard spots. Bends, cuts, and threads easily on the job. Threads are clean, sharp, and free running; and the inside surface is clean and free from rough spots and burrs.

Enamelite Finish

**Red Label.** Protected inside and outside with a heavy, baked-on-coating of wear-resisting black enamel, highly resistant to acid types of corrosion. Will not chip, crack, or flake under the most severe installation requirements.

Hot Dipped Galvite Finish

**Blue Label.** Hot-dipped galvanized inside and outside with a special coating of baked-on lacquer applied inside and outside to further insure high corrosion-resistance.

Conduit is furnished in 10-foot lengths, threaded both ends, with coupling screwed on one end.

Conduit is always designated by its nominal inside diameter. All weights and dimensions shown are nominal.

## Triangle Rigid Steel Conduit, Couplings and Elbows

Hot-Dipped Galvanized and Lacquer Finished  
Conduit also Made in Black Enamelled Finish

Approved by Underwriters' Laboratories, Inc.

Hot-Dipped Galvanized

In hot-dipped galvanizing, each length is immersed in a bath of molten virgin zinc (99.85% pure) thoroughly zinging the interior as well as the exterior.

The intimate contact of the surfaces of the tube with the molten zinc results in an alloying action thoroughly bonding the heavy, pure zinc coating to the pipe.

Conduit is submerged in a linseed oil base lacquer and thoroughly baked, giving a smooth finish.

Conforms to federal specification WWC581a.

Black Enamelled

Immersed in a bath of black enamel and baked, producing a pipe with black luster finish.

Conforms to federal specification WWC571.

Conduit furnished in 10-foot lengths, threaded both ends with one coupling. Conduit pipe is known and spoken of by its nominal inside diameter.

Write for prices on special sizes, bends, and lengths.

All weights are subject to a 5 per cent variation.

## Republic Electrune E.M.T. Lightweight Threadless Rigid Steel Conduit Inch-Marked

No threads to cut, ductile, bends easily, is light, tough and strong; resists corrosion.

Steeltubes takes up less space and consequently can be used in narrower quarters.

Knurled inside finish shows by actual test a saving of 20 to 30 per cent in the effort required to pull cable through. Cable rides the tops of the tiny knobs instead of making contact the entire length.

The National Electrical Code approves Steeltubes for open and concealed work and buried in concrete.

## Triangle Metallic Thin Wall Conduit and 90° Elbows

Hot-Dipped Galvanized—Threadless

Approved by Underwriters' Laboratories, Inc.

Made from flat cold rolled steel and welded, giving a true tube of uniform thickness and strength.

Tubing is first pickled and cleaned to remove all scale and foreign substances, and is then immersed in a bath of molten virgin zinc (99.85% pure) giving a uniformly heavy zinc coating on the inside and outside surfaces.

Approved by N.E.C. up to and including 2-inch size for use on circuits where the conductor size does not exceed No. 1/0 and where the voltage does not exceed 600 volts.

Furnished in 10-foot lengths.

## Everdur Electrical Conduit

Composed principally of copper. A non-magnetic copper-silicon alloy which provides great strength, excellent corrosion resistance, high fatigue limit and exceptional ductility.

In addition to strength and other excellent physical qualities, this copper-silicon alloy offers good resistance to a large number of corroding agents. The durability of this alloy is attested by the records of equipment, such as smoke and soot washers and blowers; air conditioning and drainage fittings in battery and plating rooms; pumps, valves, and process piping and vessels in many chemical plants which have been operated successfully for long periods under unusually corrosive conditions.

## Seamless Rigid Conduit

Listed by the Underwriters' Laboratories, Inc.

Everdur rigid conduit is supplied in nominal sizes from 1/4 to 4 inches. Its physical properties are comparable to mild steel rigid conduit. As ordinarily supplied, the 10-foot lengths are threaded both ends with one Everdur coupling attached.

Nom. Size In.	Outside Diameter Inches	Inside Diameter Inches	Wall Thickness Inches	Wt. Lb. per Foot
1/4	.540	.382	.079	.4339
3/8	.675	.503	.086	.6034

4	4.500	4.026	.237	12.04

## Seamless EMT Conduit

Listed by the Underwriters' Laboratories, Inc.

Everdur electric metallic tubing is a thin-wall conduit made of Everdur metal. Its physical properties are comparable to mild steel tubing of equivalent wall thickness. It is available in sizes 3/8 to 2 inches in diameter, in standard 10-foot lengths, for assembly with threadless fittings which facilitate installation and dismantling.

Nom. Size, In.	Outside Diameter Inches	Inside Diameter Inches	Wall Thickness Inches	Wt. Lb. per Foot
3/8	.577	.493	.042	.2677
1/2	.706	.622	.042	.3322

1 1/2	1.740	1.610	.065	1.297
2	2.197	2.067	.065	1.651

## Seamless Raceways

Special sizes in larger diameters with wall thicknesses comparable to Everdur Electrical Metallic Tubing are available up to 4 inches, nominal sizes, in random lengths of 10 to 14 feet. They are not listed with Underwriters', but are specified as Everdur Seamless Raceways.

Nom. Size In.	Outside Diameter Inches	Inside Diameter Inches	Wall Thickness Inches	Approx. Wt. Lb. per Foot
2 1/2	2.605	2.469	.068	2.055

4	4.182	4.026	.078	3.813

## Seamless Couplings

For Rigid Conduit—With Tapered Threads

All Everdur couplings have tapered threads resulting in stronger and tighter joints which are essential for installations in hazardous locations.

Nom. Size In.	Outside Diameter Inches	Outside Surface	Length Inches	Wt. Lb. per 100 Pieces

Triangle Flexible Steel Conduit  
Hot-Dip Galvanized

Approved by Underwriters' Laboratories, Inc.

Made from one continuous length of steel strip. Exceptionally flexible in short radius bends. Interlocking convolutions eliminate accidental opening when being bent. Interior surface is free from burrs and sharp edges. Conforms to federal specification WWC566.

Flextube Non-Metallic Flexible Conduit  
Loom

Made from an especially prepared stiff fiber cord interwoven with a tough yarn. The result is a seamless tube with a smooth, hard, canvas-like roller-bearing interior which affords the best obtainable fishing surface. This interwoven insulating tubing is then treated with a superior moisture and flame resisting compound, is further protected by a strong, tough braiding which is also compounded.

Regularly inspected and labeled by the Underwriters' Laboratories.

### Chase Nipples

Approved by Underwriters' Laboratories

Where a Chase Nipple and coupling are used, a box can be removed without disturbing the conduit. Where two outlet boxes are to be used back to back, break out center knock-outs and use a Chase Nipple and a lock-nut to hold the boxes together.

### T&B \*Erickson Conduit Couplings

Approved by Underwriters' Laboratories

Conduit Union does away with running threads, saving dies and labor. Permits opening of conduit at any desired point. Enables the start of circuit from 2 outlets and makes a good, strong connection at any point in the run. The pipe ends abut so that no space is left between the lengths of conduit, therefore, it is not necessary to draw the 2 ends of the conduit together. Vibration will not loosen a connection made with an Erickson coupling. The hexagon shoulder and ridges on the outside of the coupling make an easy grip for a pipe wrench.

## O.Z. Type SP Split Couplings

Eliminates use of running thread.

Constructed so that it will slip over the conduit when in an open position to permit butting of the ends of the conduit. The fitting can then be brought back into proper position, meshed and tightened, making a rigid conduit connection.

Made of malleable iron, cadmium plated.

## Appleton Conduit Fittings

Schedule TW

For Electrical Metallic Tubing—Cadmium Finish  
Gland Ring Type Couplings and Connectors  
Approved Raintight—PATENT 2064140  
Couplings

Gland ring type coupling and connector are furnished with a round split curved ring and tightening nut. The ring drops into position and the nut tightens the ring securely to the electrical metallic tubing, making a rigid connection which is absolutely raintight. Couplings in 1/2 to 2-inch sizes have hexagonal nuts and the center portion is also hexagonal so that it can be held rigidly with wrench when connecting lengths of electrical metallic tubing.

No.	Size In.	Std. Pkg.	Car- ton	Wt., Lb. Std. Pkg.

## T&B Watertight Couplings and Connectors

For Thinwall Conduit (E.M.T.)

With Slotted Steel Compression Rings and Watertight Brass Sealing Rings

Approved by Underwriters' Laboratories

Has formed steel ribbed glands, with opposite faces parallel, which are easily tightened with wrench or pliers. Double-ring watertight construction.

### Couplings

## T&B Non-Watertight Couplings and Connectors

For Thinwall Conduit (E.M.T.)

Approved by Underwriters' Laboratories

No. 4270, Coupling

No. 4271, Connector

Light, strong and efficient. Has satin-smooth threads and rounded edges. No burrs in the interior of the body.

Ribbed design of the glands means parts are easily tightened.

Size In.	No.	Per 100	Car- ton	Std. Pkg.	Wt., Lb. per 100
1/2	4270	\$8.00	50	200	11

With Points for Tubing. .... inches	1/2	3/4	1

No. 14210 indenter points for above tools are available.

## Electrician's Thin Wall Conduit Utility Tools

No. 2000

With two of these tools it is possible to tighten nuts on couplings, remove burrs from conduit, ream for a smooth edge, and tighten nut at outlet box. Will fit both 1/2 and 3/4-inch thin wall conduit fittings.

Drop forged from selected steel. Heat-treated and tempered. Heavily plated with polished heads.

Packed 12 in a display carton.

Weight per dozen, 5 pounds.

No. 2000, For Appleton and Similar Type Fittings, Openings, 1 1/16 and 1 3/16 Inches. ....	each	\$2.00
No. 2001, For T & B and Similar Type Fittings, Openings, 1x1 1/4 Inches. ....	each	2.00

## No. 33 T & B Wrenches and Reamers For E.M.T.

A combination tool. Extremely handy for all 1/2 and 3/4-inch E.M.T. installations. The same tool tightens the glands on couplings and connectors, removes burrs from tubing, and reams edge of conduit. Drop-forged steel, heat-treated and tempered.

No. 33. .... each \$1.00

## National Bushcaps

## Galvanized Bushings—Tin Caps

A National Bushcap consists of a full strength, National Malleable Iron Bushing closed by a tin cap. The cap is pressed in tightly and will stay put. It can be easily removed when desired.

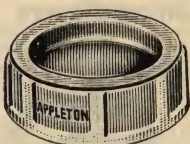

A National Bushcap placed on an open end, when conduit is installed, will keep it clean and clear until the wires are drawn in.

## National Malleable Iron Insulated Bushings

Designed to prevent disastrous grounds which frequently occur with uninsulated bushings. Insulating ring is an integral part of bushing and cannot loosen or fall out. Extremely tough, but not brittle, material and will stand intense strain in installation and use.

Made to N.E.C. standard.

Sherardized; minimum four-dip Preece test; rustproof.

#### Bushings

The 1/2-inch bushing has hole for single braid rubber-covered wire up to No. 8; 3/4-inch bushing has hole for double braid wire up to No. 4.

### Appleton Insulating End Bushings

Schedule EB

Type EB—Deep Type  
Threaded

Type EBC—Deep Type  
No-Thread  
With Set Screw

Type EBS—  
Shallow Type  
Threaded

Designed for use where space is limited and where a neat appearing and substantial insulated outlet is required on the end of conduit.

Made of bakelite, laminated, which has a high insulative property and mechanical strength.

Special treatment renders bushing impervious to moisture absorption and affords excellent electrical properties.

Tensile strength per square inch, 8000 pounds.

Dielectric strength, 700 volts per Mil.

Flexural strength per square inch, 16000 pounds.

After immersion in water for 24 hours at 25 degrees C., moisture absorption is 1.3 to 2 per cent.

Withstands heat test of 200 degrees F. without change in shape.

#### Type EB and EBC—Deep Type

## T &amp; B Insulating End Bushings

Used to provide a smoothly rounded insulated surface protecting wires against possible abrasion and shorts where wires emerge from conduit. Especially useful where conduit terminates in switch or junction boxes and also on conduit runs terminating behind switch boards, at motors, etc.

Formed from solid insulating material of the strongest and most durable type available, and are unaffected by normal heat, moisture and corrosive agents.

## Deep Type—Threaded for 1/2 to 6-Inch Conduit

For ends of conduit at switchboards, motors, etc. Can be used with insulating inserts. Long threads and rugged design assure against breakage.

No.	Each	Size In.	DIMENSIONS, INCHES Depth Diameter	Std. Pkg.	Wt. Lb. Per 100

## T &amp; B Insulating Inserts

Blank

2-Hole

3-Hole

Blank is for use with deep type, threaded and threadless, insulating end bushings where it is desired to insulate each conductor.

Two-Hole and Three-Hole will pass the maximum size of conductors allowed in the conduit by the N.E.C.

## O.Z. Type B Insulated Conduit Bushings

Illustrates how Insulating Material is Molded and Locked into the Casting

A bushing designed for prevention of grounds using bakelite as an insulator. Casting made of malleable iron and cadmium plated. Bushing is capped.

Can be supplied hot-dipped galvanized, bronze or aluminum. Prices on application.

## O.Z. Type E Conduit End Fittings

Installed at the end of the conduit to provide a means of spacing and individually insulating wires as they emerge from the conduit end. Body made of cadmium plated malleable iron. Cover made of molded canvas bakelite which has a high dielectric and mechanical strength. Holes other than standard can be drilled according to specification. Set-screw type fittings for threadless conduit can be furnished.

For hot-dip galvanized body, add 20 per cent to price.

Can be supplied for thin wall conduit (E.M.T.) and fiber conduit on request at additional cost.

\*Holes accommodate maximum size cable according to code.

## Federal Porcelain Clamp Bushings

No. A-1

No. B-1

No. K-1

Made of vitrified porcelain in one piece. Clamping rings are made of metal, threaded to fit threads on the porcelain. By reversing the clamp ring bushings can be used on thicker material. Bushings furnished in all colors.

Nos. K-1 and K-2 elbow bushings are of a special shape for outdoor work, preventing water from entering around wire; also prevents damage to wire or insulation by sudden bending at the bushing.

Stove Bolts & Nuts		.50	1000	1

**T&B Slip-In Fixture Studs**

Approved by Underwriters' Laboratories

Can be installed from interior of box without removal of parts. Occupies minimum space in box, thus allowing more room for wires.

No small nuts and bolts to lose or fuss with.

To install this stud, back off locknut a few turns, slip base of stud into knockout from inside of box, allow prongs to drop into fixture stud holes and tighten down the locknut.

### T&B Entrance Caps

For Thinwall Conduit

Cap is held in place by two screws which are burred to prevent falling out.

Frame is bushed to protect the conductor.

Top of frame, which holds the insulator, is split permitting conductors to slip in without threading.

Connection to tubing is watertight.

Hot galvanized finish.

Size Inches	No.	Per 100	No. Holes in Insulator	Carton	Std. Pkg.	Wt. Lb. per 100
1/2	5525	\$50.00	4	10	50	80

1	5527	90.00	4	5	25	168
1 1/4	5528	210.00	4	1	10	260

For Use with Service Entrance or Drop Cable

Cable passes through the large, one-hole insulator and is then protected by E.M.T. to the meter box or switch.

Size Inches	No.	Per 100	Insulator Open.	1-In. Diameter	5	50	112
3/4	5526KC	\$70.00	Insulator Open.	1-In. Diameter	5	50	112
1	5527KC	90.00	Insulator Open.	1 1/4-In. Diameter	5	25	168

### T&B Entrance Ells

Approved by Underwriters' Laboratories

Designed for a straight pull in either direction. Mounts flush on the wall, eliminating any need for bending conduit.

No sharp edges. Carefully bushed to protect the cable. Cover held in place with one screw which does not come out. A turn of the screw, and the cover slips out. Made of heavy cast iron and plated with Tabolite—the superior galvanized finish.

## Type CGY Service Entrance Connectors

Schedule CM

## 2-Screw Compression Clamp Type

This connector meets the requirements of watertightness and resistance to corrosion, the two most important requirements of a service entrance cable connector.

Screws are reversible which means they may be threaded in from either direction, making heads accessible under all conditions of installation.

Non-ferrous metal, corrosion-resistant alloy, and chromium-plated steel clamping screws.

## T&B Aluminum Wall Plates

Approved by Underwriters' Laboratories

Accommodates a maximum of three No. 4 wires in the service cable and a maximum of one No. 4 wire for the grounded connection.

Furnished plain or with non-drying Dux Seal caulking compound and with two No. 8 wood screws.

No.	Per 100	Car-ton	Std. Pkg.	Wt. Lb. per 100
5545	\$40.00	10	100	9
*5546	40.00	10	100	11

\*With Dux Seal.

## No. 2110 T&B Watertight Wall Plates

Makes a watertight job where service entrance cable enters the building. For 2W8 through 3W4.

Malleable iron.

Furnished with soft rubber gasket and three screws.

No.	Per 100	Unit Quan.	Std. Pkg.	Wt. Lb. per 100
2110	\$38.00	10	100	15

## T&B Flanged Building Heads

Approved by Underwriters' Laboratories

Used in out-building service entrances in accordance with REA specifications.

Installed by drilling a 1½-inch diameter hole through the building wall to accommodate the hub which has a ½-inch female thread.

Composition insulator has five holes, two of which are plugged.

Cap is made of aluminum.

Furnished with two wood screws for mounting.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb. per 100

## T&B Grounding Bushings

PATENTED

Approved by Underwriters' Laboratories

For use with or without jumper wire. The wedge, when screwed into place, cuts into the box, assuring a perfect ground between the conduit and box.

Made of malleable iron castings.

Size Inches	No.	Per 100	Car-ton	Std. Pkg.	Wt. Lb. per 100

**T&B Grounding Wedges**

Approved by Underwriters' Laboratories

For new or old work. Without jumper wires. Wedges clamped between the bushing and box wall, make the box a part of the ground circuit. On old work, loosen the bushing and insert the wedge. The open end slips over the wires without disturbing them.

Made of bronze.

**T&B Outdoor Meter Grounding Rings**

Used for attaching ground wires to outdoor meter cases.

Installed at either the top hub, where the service comes in, or at the bottom hub, where the service goes out to enter the house. To install, slip the ring over the hub of the watertight connector

before screwing the connector into the hub of the meter case. Ring can be turned at any angle required for the ground wire; No. 8, 6, or 4 size.

If the outdoor service is conduit instead of cable, the meter grounding ring should be installed between the locknut and the meter hub. Made of malleable iron with Tabolette finish. Connector, clip and screw, is made of bronze.

For Cable or Conduit Size Inches	No.	Per 100	Std. Pkg.	Weight Pounds per 100
¾	595	\$10.00	100	5
1	596	15.00	100	5½

**Type GR Appleton Bonding Meter Rings**

Schedule GF

Designed for grounding meter box to a driven or artificial ground, when a water pipe or other grounding electrode is not available in building. Meter ring is placed between watertight connector and hub

of meter box, after which ground wire is placed through either vertical or horizontal hole and screw is then tightened. This makes positive bond—no soldering.

No.	Per 100	Size In.	Carton	Std. Pkg.	Wt. Lb. Std. Pkg.

**No. 58 Mueller Radio Ground Clampings**

Used to ground a radio set or other apparatus to a water or radiator pipe.

CLAMPPIPE™

Channeled construction gives a five-point contact with rigidity. Will not spread, bend, or lop over.

The point of the large, casehardened screw cuts through paint or corrosion into clean metal, insuring a good contact.

The small screw with undercut head, acts as a cupped washer to hold the ground wire.

Packed 10 in a box, 100 in a carton.

Shipping weight per 100, 8 pounds.

**T & B Solderless Ground Clamps**

Approved by Underwriters' Laboratories

No solder is required in installing these clamps. Simply loop the ground wire through the slot, strap the clamp around the water pipe, tighten up the nut and it's on. Approved as solderless.

Made of No. 16 gage copper, tinned finish.

No.	Per 100	Size Inches	Unit Quan.	Std. Pkg.	Wt., Lb. per 100

6	450.00	6	1	1	217

**T&B Single-Bolt Ground Clamps**

Approved by Underwriters' Laboratories

Easily and quickly installed—only one bolt to tighten. Ground wire locks the jaws together and the bolt fastens them tightly on the waterpipe.

When using 1-inch waterpipe, clamp the ground wire with the end hook. When using ½-inch waterpipe, use the lower hook. For ¾-inch waterpipe, use either hook.

Packed 5 in a carton, 25 in a standard package.

For No. 4 or No. 6 Unarmored Ground Wire

## T &amp; B Ground Fittings

## No. 3962 For Armored Ground Wire

Approved by Underwriters' Laboratories

Designed for a neat, quick and reliable connection. The built-in Bite-Tite connector securely holds the armor of the cable in place without injury to the sheath.

The solderless grip takes any size ground wire from No. 4 to No. 8. The projecting tongue extends into the tub portion, providing mechanical protection for the ground wire.

Use No. 3960 armored wire hub for No. 4, No. 6 or No. 8 armored wire.

No.	Per 100	Waterpipe Size Inches	Unit Quan.	Std. Pkg.	Wt., Lb. per 100
3962	\$35.00	1/2, 3/4, or 1	5	25	58

Ground fittings for use with armored wire to fit larger sizes of waterpipe are available.

## For Standard Rigid Conduit

With Connection for No. 8 to No. 2 Ground Wire

Approved by Underwriters' Laboratories

Installation is simple and connection is dependable. The conduit hub has a full size bushing and conduit stop. Threads are clean cut.

The solderless grip takes a full range of ground wire. The projecting tongue extends into the hub portion, providing mechanical protection for the ground wire.

No. 3932 and No. 3933 use No. 3930 conduit hub, for

1/2-inch conduit. No. 3942 uses No. 3940 conduit hub, for 3/4-inch conduit.

No.	Per 100	Waterpipe Size Inches	Unit Quan.	Std. Pkg.	Wt., Lb. per 100
3932	\$50.00	1/2, 3/4, or 1	5	25	58
3933	100.00	1 1/4, 1 1/2, or 2	5	10	75
3942	125.00	1 1/2, 3/4, or 1	5	25	61

## No. 3972 T &amp; B Adjustable Length Ground Fittings

With Connection for No. 8 to No. 2 Ground Wire

Approved by Underwriters' Laboratories

An 8-inch length of No. 4 wire is permanently staked in the hub section. Insert the other end of this wire in the solderless grip of the waterpipe clamp.

Easily adjusted in length, it can also be bent or turned into any position desired.

Use No. 3970 conduit hub, adjustable length, for 1/2-inch conduit.

No.	Per 100	Waterpipe Size Inches	Unit Quan.	Std. Pkg.	Wt., Lb. per 100
3972	\$75.00	1/2, 3/4, or 1	5	25	66

Other conduit type ground fittings to fit larger sizes of waterpipe are available.

## T &amp; B Ground Fittings

Approved by Underwriters' Laboratories

Simple in design and easy to install. Has interchangeable conduit hubs and waterpipe clamps. Takes care of any of the following grounding jobs:

Bare ground wire (No. 4 or No. 6) to 1/2 inch through 6-inch waterpipe.

Armored ground wire (No. 8 to No. 2) to 1/2 inch through 6-inch waterpipe.

Conduit (1/2, 3/4, or 1 inch) to 1/2 inch through 6-inch waterpipe.

## Complete Fitting

Adjustable conduit (1/2 inch) hub to 1/2 inch through 6-inch waterpipe.

Each hub and waterpipe clamp is clearly marked with size range and number for quick identification. Clamps have high reinforcing ribs for extra strength. All bolts have deep screwdriver slots or high hex-heads to help make tightening easy. Hubs designed to meet waterpipe at any angle.

Made of malleable iron, plated with Tabolite galvanizing to resist corrosion.

\*For use also on lead pipe in sizes 1/2 and 3/4-inch Grades AA and AAA, and 1-inch Grades A, AA, and AAA.

## Groundulet Safety Circuit Equipment

Schedule CM

Type GC Strap Clamps

For bonding and grounding equipment in interior wiring systems.

No. GC101 is made of steel.

No. GC102 is made of brass.

### †No. GC100 Type GC Grounding Straps

Flexible Copper, tinned.

Available in broken coils less than 50 ft.; 1 to 10 coils of 50 ft. each, 11 to 25 coils of 50 ft. each, 26 to 50 coils of 50 ft. each, 51 or more coils of 50 ft. each.

## Type GC Groundulet Bushings

Schedule CM

Without Cap-Screw, Lug, or Wire Clip

With Cap-Screw (For use with Pressure Connectors)

With Grounding Screw (For Bonding without Jumper Wires)

All conduits entering a service box must be properly bonded to it by bonding jumpers, ground clamps, lugs or devices approved for the purpose.

Type GC Groundulet bushings and jumpers make dependable and approved bonding connections. The bushings provide a means for connecting bonding jumpers to them.

The bonding jumpers being within the cabinet, are protected from mechanical injury and all fire hazard is confined within the cabinet.

9446	1/2, 3/4, 1	1	5	25	13

**No. 9447 Type GCRC**

For Ground Rod

For bare or insulated copper wire.

Especially designed for ground rods. Makes a neat installation and better bond.

Ground wire is wedged against the rod by tightening the screw and is permanently set by running down the locknut.

No.	Ground Rod, Inches	Takes Wire B&S	Carton	Std. Pkg.	Wt. Lb. Std. Pkg.
9447	1/2, 3/4	8, 6 or 4	5	25	3 1/2

**No. 9402 Type GCH**For Rigid Conduit  
With Brass Washer

Equipped with flat washer.

Rigid clamp jaws hold securely to water pipe.

No.	Conduit Ground Inches	Size Water Pipe, Inches	Ground Rod, In.	Carton	Std. Pkg.	Wt. Lb. Std. Pkg.
9402	1/2	1/2, 3/4, 1	1	5	25	10

**No. 9481 Type FGF**

Flexible

Has an 8-inch flexible copper strip that can be bent, twisted or turned into any position. Very desirable when the water pipe or ground rod is not easily accessible.

Furnished with the Appleton vise-grip clamp.

No.	Ground Rod, Inches	Size Water Pipe, Inches	Carton	Std. Pkg.	Wt. Lb. Std. Pkg.
9481	1/2	1/2, 3/4 or 1	5	25	18

**No. 9494 Type GSFF**

Flexible

Furnished with V-shaped clamp. Fits any 1/2-inch ground conduit and takes 1/2 to 1-inch ground rod—solderless type.

Can be bent, twisted or turned into any position.

No.	Conduit Ground Inches	Size Water Pipe, Inches	Carton	Std. Pkg.	Wt. Lb. Std. Pkg.
9494	1/2	1/2, 3/4, 1	5	25	22

**No. 9445 Type GCH Appleton Ground Fittings***Schedule GF*  
**Cadmium Finish**

With adjustable top clamp to accommodate No. 8 or No. 6 bare armored ground conductor, and for grounding 1/2, 3/4 or 1-inch water pipe, or 1-inch ground rod. Cadmium Finish.

Carton, 5. Standard package, 25.  
Weight per standard package, 10 pounds.

**No. 9448 Type GCAR Appleton Ground Fittings**

Adjustable and Reversible

Swivel type. Adapted for No. 8, 6 or 4 B&S armored ground wire, and for grounding 1/2, 3/4 or 1-inch water pipe, or 1-inch ground rod. Cadmium Finish.

Carton, 5. Standard package, 25.  
Weight per standard package, 15 pounds.

**No. 9489 Type GCWC Appleton Ground Fittings***Schedule GF***Cadmium Finish**

Has deck with a hole drilled to accommodate ground wire. The screw, when tightened, wedges the wire into a cup in the center of fitting, making a good bond and positive grip.

Adapted for Nos. 8, 6 or 4 bare or insulated copper wire.

No.	Size Water Pipe, Inches	Ground Rod, Inches	Carton	Std. Pkg.	Wt. Lb. Std. Pkg.
9489	1/2, 3/4, 1	1	5	25	11

**No. 9491 Type GCP Appleton Solderless Ground Fittings***Schedule GF***Cadmium Finish**

This malleable clamp will take wires No. 8, 6 or 4 either solid or stranded. Wire fastening device consists of a 3/8-inch bolt with a 1/4-inch hole through it. In connecting wire, end of wire is put through hole in bolt, then nut is tightened and bolt will clamp wire. This method makes a positive and simple connection. Clamp can be used to advantage where it is not necessary to run ground wire in armored or rigid cables.

Size grounding, 1/2, 3/4, or 1-inch water pipe; 1-inch ground rod. Packed 5 in carton; 25 in standard package.

Weight per standard package, 8 pounds.

**No. 9493 Type GCNS Appleton Non-Swivel Ground Fittings***Schedule GF*

Fits Nos. 8, 6 or 4 B&S armored ground wire and takes 1/2 to 1-inch water pipe or 1-inch ground rod. May also be used with Nos. 8, 6 or 4 bare or insulated copper wire. Cadmium finish.

No.	Size Water Pipe, Inches	Ground Rod, In.	Carton	Std. Pkg.	Wt. Lb. Std. Pkg.
9493	1/2, 3/4, 1	1	5	25	7 1/2

## Appleton Ground Fittings

Schedule GF

Cadmium Finish

For Grounding Service Wire and Conduit System

### No. 9492 Type GCVG

For Rigid Conduit  
With Soldering Lug

The clamp, with vise-grip, can be attached to pipe that is closely secured to surface.

Adapted for Nos. 8, 6 or 4 B&S armored ground wire.

No.	Conduit Ground, In.	Size Water Pipe, Inches	Ground Rod, Inches	Carton	Std. Pkg.	Wt., Lb. Std. Pkg.
9492	1/2	1/2, 3/4, 1	1	5	25	19

### Type LGC

Adjustable

For Large Size Water Pipes

The deck has a heavy brass washer and by placing the ground wire under the lug it makes a positive bond.

Adapted for Nos. 8, 6 or 4 B&S armored ground wire.

No.	Conduit Ground Inches	Size Grounding Inches	Carton	Std. Pkg.	Wt., Lb. Std. Pkg.
9482	1/2	1 1/4, 1 1/2 and 2	5	25	20
9483	1/2	2 1/2 and 3	5	10	15
9484	1/2	3 1/2 and 4	5	5	9

### Type LGCH

For Large Size Water Pipe

Has hole through deck to take Nos. 8, 6 or 4 bare or insulated copper wire which is held in place by the center screw and lock washer.

Has V-shaped clamp.

No.	Size Water Pipe, Inches	Carton	Std. Pkg.	Wt., Lb. Std. Pkg.
9497	1 1/4, 1 1/2, 2	5	10	5
9498	2 1/2 and 3	5	10	11
9499	3 1/2 and 4	5	10	15

### No. 9486 Grounding Water Meter Shunt

Consists of two grounding fittings with screws connected to a 24-inch length of flexible copper strap.

No.	Grounding Size, Inches	Water Pipe	Carton	Std. Pkg.	Wt., Lb. Std. Pkg.
9486	1/2, 3/4, 1	1/2 to 1 Ground Rod	5	25	25

### No. GF13A Sherman Heavy Duty Cast Ground Clamps

For copper water pipe connections. Fits 1/4 to 3/4-inch pipe and 1/2 to 1-inch diameter ground rods.

No. ....	GF13A
Per 100 .....	\$60.00
Carton .....	10
Standard Package .....	100
Weight per 1000 .....	pounds 340

## Sherman Ground Fittings

For Bare Copper Wire

No. GF2

No. GF3

No. GF2, conduit type, is solderless with lug. Rotating head. Reversible for use on rod also.

Conduit size, 1/2 inch.

No. GF3 with lug is designed expressly for No. 4 bare copper wire; will take to No. 10 B. & S.

No. GF7, armored wire type, is solderless with rotating head, reversible for rod. No. 8 or 6 wire in armor.

No. GF14 is same as No. GF3 except that no soldering lug is provided.

Heavy malleable iron, rustproofed.

Approved by Underwriters' Laboratories.

Slotted clamp allows easy installation. Reversible clamp for pipe or rod.

No.	Each	Pipe Size Inches	Carton Quantity	No. in Standard Package	Wt., Lb. per 1000
GF2	\$ .73	1/2, 3/4, 1	5	25	650
GF3	.40	1/2, 3/4, 1	5	25	450
GF7	.46	1/2, 3/4, 1	5	25	410
GF14	.36	1/2, 3/4, 1	5	25	440
GF9	.79	1 1/4, 1 1/2, 2	5	25	560
GF10	3.39	2 1/2, 3	5	25	1125
GF11	4.22	3 1/2, 4	5	25	1500

## Sherman Copper Ground Clamps

Solderless Type

Solder Type

For general grounding or bonding of electrical conductors. Heavy copper strap is easy to apply.

Solderless No.	1SL	2SL	3SL	4SL
Solder No.	1	2	3	4
Pipe Size .....	3/8-1	3/8-2	3/8-3	3/8-4
Carton Quantity .....	100	100	50	25
Standard Package .....	1000	1000	500	250
Weight per 1000 .....	80	130	170	200

Prices upon application.

## No. 1 Reliable Station Ground Clamps

For grounding of communication circuits.

For 3/8 to 1 1/4-inch pipe.

Tinned copper strips, round edge with close fitting threads.

Standard package, 100.

No. 1, Shipping Weight, 6 Pounds per 100 .... per 100 \$7.00

**O.Z. Type AG Ground Connectors****For Cable to Pipe or Rod**

Used for connecting a ground wire at right angles to a driven ground rod or pipe. Everdur U-bolt, nuts and lock washers complete a positive ground fitting combining strength and corrosion resistance.

## Appleton Sta-Tite Pipe Hangers

Schedule CFS

Cadmium Finish

For Use With Rigid Conduit (Heavy-Wall) and Threadless Thin-Wall Conduit

Type PHS with Single Conduit Parallel with Structural Shape

Sta-Tite Pipe Hangers are designed to accommodate  $\frac{1}{2}$ ,  $\frac{3}{4}$  and 1-inch rigid conduit (heavy wall) or  $\frac{1}{2}$ ,  $\frac{3}{4}$ , 1,  $1\frac{1}{4}$ , and  $1\frac{1}{2}$ -inch threadless thin-wall conduit. Types PHS and PHD permit running the conduit parallel with beam, crosswise, or any horizontal angle.

### Type PHS—For Single Line Conduit Run Parallel or at Right Angles

No. 2330

For  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch rigid conduit (heavy-wall); also  $\frac{1}{2}$ ,  $\frac{3}{4}$  and 1-inch threadless thin-wall conduit.

Carton, 10. Std. pkg. 100; wt. std. pkg., 80 lb.

No. 2331

For 1-inch rigid conduit (heavy-wall); also  $1\frac{1}{4}$  and  $1\frac{1}{2}$ -inch threadless thin-wall conduit.

Carton, 10. Std. pkg. 50; wt. std. pkg., 60 lb.

### Type PHD—For 2 Lines of Conduit Run Parallel or at Right Angles

No. 2335

For  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch rigid conduit (heavy-wall); also  $\frac{1}{2}$ ,  $\frac{3}{4}$  and 1-inch threadless thin-wall conduit.

Carton, 10. Std. pkg. 100; wt. std. pkg., 85 lb.

No. 2336

For 1-inch rigid conduit (heavy-wall); also  $1\frac{1}{4}$  and  $1\frac{1}{2}$ -inch threadless thin-wall conduit.

Carton, 10. Std. pkg. 50; wt. std. pkg., 60 lb.

### Type PHK-2—For Carrying Open Wires on Structural Steel Work

No. 2340

For 2 Porcelain Knobs

Porcelain knobs and screws not furnished.

Carton quantity, 10.

Std. pkg., 100.

Wt. std. pkg., 115 lb.

### Type PK-3—For Carrying Open Wires on Structural Steel Work

No. 2341

For 3 Porcelain Knobs

Porcelain knobs and screws not furnished.

Carton quantity, 10.

Std. pkg., 100.

Wt. std. pkg., 170 lb.

### Type PH—For Suspending Groups of Pipes From Structural Shapes

No. 2342

Type PH is also for use with accessories listed below.

Carton quantity, 100.

Std. pkg. 100.

Wt. std. pkg., 65 lb.

### Accessories for Type PH Pipe Hangers

#### Single Style—For 1 Pipe

Carton, 10.

Std. pkg. 100; wt. std. pkg., 18 lb.

No. 2345

For  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch rigid conduit (heavy-wall); also  $\frac{1}{2}$ ,  $\frac{3}{4}$  and 1-inch threadless thin wall conduit.

No. 2346

For 1-inch rigid conduit (heavy-wall);  $1\frac{1}{4}$  and  $1\frac{1}{2}$ -inch threadless thin-wall conduit.

#### Double Style—For 2 Pipes

Carton, 10.

Std. pkg. 100; wt. std. pkg., 20 lb.

No. 2350

For  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch rigid conduit (heavy-wall);  $\frac{1}{2}$ ,  $\frac{3}{4}$  and 1-inch threadless thin-wall conduit.

No. 2351

For 1-inch rigid conduit (heavy-wall);  $1\frac{1}{4}$  and  $1\frac{1}{2}$ -inch thin-wall threadless conduit.

#### For Carrying Open Wires on Structural Steel Work \*No. 2355, With Holes for Attaching 2 Porcelain Knobs

Carton, 10.

Standard package, 100.

Wt. std. pkg., 50 lb.

#### \*No. 2356, With Holes for Attaching 3 Porcelain Knobs

Carton 10. Std. pkg. 100.

Wt. std. pkg., 100 lb.

\*Holes tapped 10-24,  $\frac{5}{16}$ -inch-18, and  $\frac{3}{8}$ -inch-16, respectively. Porcelain knobs and screws not furnished.

## Wedgtite Hangers and Wire Supports

Type CHRP Installed  
Pipe Parallel with a  
Structural Shape

Used for attaching conduit or wire hangers to structural steel members.

Can be installed without drilling or in any way preparing the member to which attached.

A few blows of the hammer makes the attachment secure.

### Type CHRP

For pipe running at right angle to support.

No. For Flange		Conduit Size Inches	Each
1/8"-1/2"	1/4"-5/8"		
CHRP1	CHRP12	1/2	\$.40
CHRP2	CHRP22	3/4	.45
CHRP3	CHRP32	1	.50
CHRP4	CHRP42	1 1/4	.55
CHRP5	CHRP52	1 1/2	.60
CHRP6	CHRP62	2	.65

### Type CHU

For suspending a pipe or group of pipes from a structural steel support. Takes 1/2-inch hanger bolt.

*Thick. Flange Inches	No.	Each
1/8 to 1/2	CHU1	\$.50
1/4 to 5/8	CHU21	.50
5/8 to 1	CHU2	.60
3/4 to 1 1/8	CHU22	.60

### Type CHA

CHA2

CHA3

For suspending open wire from a structural steel support.

*Thickness of Flange Inches	Takes Two Porcelain Knobs		Takes Three Porcelain Knobs	
	No.	Each	No.	Each
1/8 to 1/2	CHA2	\$1.10	CHA3	\$1.50
1/4 to 5/8	CHA4	1.10	CHA6	1.50
5/8 to 1	CHA22	1.20	CHA23	1.60
3/4 to 1 1/8	CHA24	1.20	CHA26	1.60

### Type CHB

#### For One Pipe

For supporting pipes on structural steel supports.

*Thick. Flange Inches	SIZE PIPE, INCHES		For One Pipe		For Two Pipes	
	Thick Wall	Thin Wall	No.	Each	No.	Each
1/8 to 1/2	1 1/2, 3/4	1 1/2, 3/4, 1	CHB1112	\$.65	CHB1122	\$.75
	1	1 1/4, 1 1/2	CHB1113	.65	CHB1123	.75
1/4 to 5/8	1 1/2, 3/4	1 1/2, 3/4, 1	CHB1212	.65	CHB1222	.75
	1	1 1/4, 1 1/2	CHB1213	.65	CHB1223	.75
5/8 to 1	1 1/2, 3/4	1 1/2, 3/4, 1	CHB2112	.75	CHB2122	.85
	1	1 1/4, 1 1/2	CHB2113	.75	CHB2123	.85
3/4 to 1 1/8	1 1/2, 3/4	1 1/2, 3/4, 1	CHB2212	.75	CHB2222	.85
	1	1 1/4, 1 1/2	CHB2213	.75	CHB2223	.85

### Type CHW Wedgtite Wedges

No.	*Thickness of Flange, Inches	Each
CHW1	1/8 to 1/2, 5/8 to 1	\$.20
CHW2	1/4 to 5/8, 3/4 to 1 1/8	.20

\*Thickness of flange at a point 3/4 to 1-inch from the edge, where wedge engages with it. With Type CHRP hangers, the thickness of couplings which hold pipe away from flange should be subtracted from maximum thickness given.

## T&B Cable Straps For Use with Service Entrance Cable

No. 1341

Nos. 1344 and 1345

Bolt hole is high. Takes any type of 1/4-inch screw. Available in either malleable iron hot dip galvanized or rust proof aluminum.

Carton, 50.

Standard package, 100.

Cable Size	Malleable Iron			Aluminum		
	No.	Per 100	Wt., Lb.	No.	Per 100	Wt., Lb.

\*Armored cable.

**No. 7145 Appleton One-Screw Straps**

Schedule CF

**Cadmium Finish**

For 1/4-inch pipe and 3/8-inch armored conductor.

No.	Size Inches	Std. Pkg.	Wt. Lb. Std. Pkg.
7145	1/4	500	9

**No. 7146 Appleton 1-Hole Straps**

Schedule CF

**Cadmium Finish****For Non-Metallic Sheathed Cable**

Fits Nos. 14W2, 12W2 and 10W2 cable. Made of lead-coated, Terne plate steel.

Packed in 5, 10, 25-pound cartons; bulk in 50-pound bags.

**No. 8066 Appleton Cable Clips**

Schedule CF

**Cadmium Finish****For Armored, Non-Metallic Sheathed and CNX Cable**

Fits Nos. 14W2, 12W2, 10W2, 14W3, and 12W3 cable. Made of Terne plate steel; rust-resisting. Fastening hole in clip is 3/16 inch diameter.

Qty. lots: 10,000, 5,000, 2500 and less than 2500. Wt. per 1000, 9 lb.

**No. 8067 Appleton 2-Hole Straps**

Schedule CF

**Cadmium Finish****For Non-Metallic Sheathed Cable**

Fits Nos. 14W2, 12W2 and 10W2 cable. Made of steel.

Packed in 5, 10 or 25-pound cartons. Average, 77 straps to a pound.

**Appleton E-Z-In Armored Cable Staples**

Schedule CF

No. 8065 staple will take Nos. 14W2, 14W3, 12W2, 12W3, 10W2 and 10W3 armored cable.

No. 8064 staple will take armored cable on non-metallic sheathed cable in sizes No. 14-2, 14-3, 12-2, 12-3, 10-2 and 10-3.

Plain finish only.

Packed in cases of 5,000.

Quantity lots: 30,000, 10,000, 5,000.

No. ....	8064	8065
Length.....inches	1 1/8	1 3/8
Weight per 5,000.....pounds	54	65

**T&B 3/8-Inch Cable Clips****No. 90 For Armored Cable**

The pitch of the clip legs is counter clockwise to the spiral of cable and holds the flat top of clip from following the convolutions and cannot enter between them. Dent in top of clip settles between rounds of cable convolutions. Cable cannot slip or pull out.

Packed in unit package, 100, 500, or bulk; 10,000 in standard package.

No. 90, Wt., per 1000, 14 Pounds....per 100 \$4.00

**No. 91 For Non-Metallic Sheathed Cable**

This clip is the same as the No. 90 except that it has no dent in the top. The legs are also shorter because the clip does not have to be driven into the wood as far as the No. 90.

Packed in unit package, 100, 500, or bulk; 10,000 in standard package. Weight per 1000, 11 pounds.

No. 91.....per 100 \$3.35

**Diamond One-Hole Malleable Clamps**

Hot galvanized. Annealed twice before galvanizing to assure ductility. Will not crack in installation.

Has but one screw hole and cuts in half the expense of screws or expansion bolts and the labor of installing as compared to the two-hole strap.

**For Standard Conduit**

**T&B One-Hole Malleable Iron Pipe Straps****For Heavywall Conduit**

Approved by Underwriters' Laboratories

No sagging conduit in a run supported by T&B malleable iron conduit straps. The lip on the end prevents the sag. The reinforcing ribs on the straps give great strength with less weight.

Each strap has been especially designed to fit the conduit snugly. Standard finish is hot dip galvanized.

### O.Z. Type U U-Bolts

#### For Clamping Conduit

Furnished with Nuts and Flat Washers.

Made of steel, cadmium plated or hot-dip galvanized; or Everdur alloy.

Standard length provides for clamping the conduit to a 3/8 inch thick plate.

### Minerallac Duplex Jiffy Clips For Tubing and Cable

An efficient fastening where parallel runs of tubing or cable are used. Only one bolt or screw is required to hold clip in place. Made in plated steel or Everdur.

No.	Steel Per Std. Pkg.	Everdur Per Std. Pkg.	Size Cable or Tube, In.	Standard Package
300	\$1.05	\$3.15	1 1/4 x 1/4	500

304	1.75	5.25	3/8 x 5/8	500

### Minerallac Jiffy Clips

Made in cadmium plated steel and Everdur, for hanging pipe, conduit, and BX cable; also for mounting coils, etc., in radios and vending machines. Only one screw or bolt is required to hold the clip and the article which it is supporting firmly in place.

### Minerallac Messenger Straps

#### For Outlet Boxes

Designed for messenger cable service and should be used in conjunction with the messenger hanger.

Made of cadmium-plated steel or Everdur alloy.

Fits all standard outlet boxes and 3/8-inch messenger cable.

Recommended stove bolt size, 1/4 x 1/2 inches.

Standard package, 100.

Size Cable.....inches	3/8
*Steel.....per std. pkg.	\$3.00
*Everdur.....per std. pkg.	6.30
Approximate Weight per Standard Package..pounds	3 1/4

\*Prices do not include stove bolts.

### Minerallac Messenger Hangers For Conduit and Cable

Made of cadmium-plated steel or Everdur alloy.

The top loop holds the cable in place while the conduit is being installed.

Recommended stove bolt size: No. M-O, 3/16 x 1 inch; No. M-1, 1/4 x 1 1/4 inches; No. M-2, 1/4 x 1 1/4 inches.

M-2	5.90	7	15.50	10	3/4	1	100

\*Prices do not include stove bolts.

### Minerallac Cable and Conduit Hangers

Listed by Underwriters' Laboratories, Inc.

Made of cadmium-plated steel or Everdur alloy.

Quickly installed to run open wiring, cable and conduit with a more compact arrangement.

For voltages above 550 volts, the hanger should be used with insulated bushings.

### Minerallac Porcelain Bushings

#### For Cable Hangers

Used on cable hangers when working with voltages of 550 volts and above.

Provides the requisite dielectric and structural strength.

No.	Per Std. Pkg.	FOR CABLE O.D. INCHES		Std. Pkg.	Wt. Lb. Std. Pkg.

**T&B Adjustable Conduit Hangers**

Approved by Underwriters' Laboratories

Will fit any flange from 2¾ to 12 inches. Universal in the range of beam flanges to be fit, the number of pipes to be accommodated, and the various angles at which the pipe may be run. Adjustable for varying plaster lines; will support any number of conduits from one to eight. Clamps made of stamped steel.

**No. 700 Type A Clamps**

Fits flanges from 2¾ to 7⅞ inches, including bolts.

Packed 100 in a standard package; weight, 33 pounds.

### R & S Cable Supports Standard Conduit Type

A compact, strong and easily installed device for supporting cables in conduit risers.

Support consists of a threaded collar, not much larger in diameter than the outlet bushing which it replaces at the end of the conduit inside of the pull box. It has a set of inserts for one or more cables as required and individual tapered cable grips. They are suitable alike for lead, paper or braid-covered cables.

In installing, the collar is screwed on to end of riser, in lieu of a bushing, the cables are then pulled, the inserts dropped into socket of collar and the split, tapered grip bushings placed over the individual cables, which are now allowed to pull the grips into place by their

own weight. A perceptible slack of cable should be provided between supports to allow for expansion and contraction.

Made of galvanized iron, with hard fiber cable grips.

**When ordering,** be sure to state exact outside diameter of cable over insulation. Size of conductor is not sufficient information.

No.	Each	Size Conduit Inches	No. of Cables	DIMENSIONS INCHES		*Max. Cable Inches

\*Maximum diameter of cable over insulation.

### Special Tile Duct Type

Made on special order only. Used to support risers run through tile duct. Can be furnished in any number of gangs. Prices and full information upon application.

### Split Type

Where installations are already in use, and the necessity of a support for the cables occurs, it is possible to utilize this type of support without the necessity of disconnecting and pulling out the cable risers. This split type can be installed around the cable and the necessary inserts and bushings as used on the conduit type inserted. The range of sizes is the same as on the conduit type.

Prices and full information upon application.

### O.Z. Split Type Cable Supports

#### Two-Piece—For 2 or More Wires

Used where cables are already installed in conduit.

Consists of two parts held together by a cadmium-plated heavy band.

Cable Supports available in lock-type, compound type, and ventilated compound type. Prices on request.

### O.Z. Conduit Type Cable Supports

#### Two-Piece—For 2 or More Wires

Fitting is comprised of two pieces and requires only standard knockout spacing. Body made of cadmium plated malleable iron. Before wires are dropped, body should be installed on the end of the conduit, instead of the conventional iron bushing. After wires are installed, treated maple wood plug is wedged between conductors.

When ordering, specify type of conductor, number of conductors in the conduit and outside diameter of each.

For hot-dip galvanized body, add 20 per cent to price.

Can be supplied for thin wall conduit (E.M.T.) and fiber conduit on request at additional cost.

**O.Z. Type CLC Terminators****For Lead Covered Cable****With Top Cover**  
**750 Volts A.C. or D.C.**

Used with a multiple or a single conductor cable up to 750 volts.

Seals the cable and grounds the lead sheath. The body of the fitting screws directly on the conduit, clamping the lead sheath to a bronze bell ring, which has been previously set into the end of the conduit.

Available in type CLH for horizontal installations, and types DSC and DLC for higher voltages. Prices on request.

**O.Z. Types CUC and CAC Terminators****For Lead Covered Cable****With Top Cover**  
**750 Volts, A.C. or D.C.**

For two or more single conductor cables. Made of malleable iron, cadmium plated.

**Type CUC** is used where the wires installed in a conduit are small enough to allow enough space for belling purposes in a pothead the same size as the conduit.

**Type CAC** is used where larger wires are installed in the same size conduit according to standard code requirements. The additional belling area required is provided for by the use of a special adapter and a larger body.

Specially drilled, non-ferrous belling and pressure rings are provided for the individual lead covered cables according to cable requirements.

Available in types CUH and CAH for horizontal installations, and types DUC and DAC for higher voltages. Prices on request.

**O.Z. Type CRC Terminators****For Rubber Covered and Other Braided Cable****With Top Cover****750 Volts, A.C. or D.C.**

For one or more cables.

Conductors are sealed by split rubber rings placed around the cable, set into a canvas bakelite seating disc and compressed by a pressure disc.

Available in type CRH for horizontal installations and types DTC and DRC for higher voltages. Prices on request.

**O.Z. Type J Terminators****For 1 or More Lead or Rubber Covered Cables**

Permits sealing and terminating conduit and cables outside of cabinets without disturbing electrical installations, thus permitting conduit work to be tied into cabinets and other devices, or permitting conduit runs to be tied together, without disturbing the existing equipment.

**When Installing with Cabinets,** the conduit work is terminated at the proper height below the box. The device is dismantled and properly assembled on the end of the conduit, then tied into the box with a chase nipple that is furnished with the fitting. When ready for installation of wiring, disassemble unit on the conduit, seal wires, then reassemble complete, making a mechanical bond between the conduit raceway system and the box. The Oversize sleeve is of sufficient dimensions to provide ample room for pulling-in, belling, splicing, and any other necessary process.

**When Installing Straight Line Conduit**

Runs, the chase nipple at the top is eliminated and conduit work extended from the top adapter. The same procedure follows as above.

**Prices and Ordering**

Prices on **Terminators, Sealing Bushings, and Compound Bushings** apply to malleable iron bodies, cadmium plated. For hot-dip galvanized finish add 20 per cent to prices; for fittings of bronze or aluminum, add 50 per cent to prices; and for filling compound, add 5 per cent to prices.

In ordering specify, (1) size of conduit, (2) diameter over lead, (3) number of conductors, and (4) diameter over insulation of individual conductors.

**O.Z. Type FR Compound Bushings**

**For Rubber Covered  
and Braided Cable**

**A.C. or D.C.**

For one or more cables.

Available in types FA, FL, and FU for lead covered cable. Prices on request.

## No. 2208-EZ National 45° Angle Box Connectors

### Open Back Type

An open back connector at 45° angle allowing for easy fishing with separate cable clamps.

Fits 14-2, 14-3, 12-2, and 4-1 armored cable; 6-1 armored lead cable; 14-2 and 14-3 plain lampcord; and  $\frac{3}{8}$ -inch flexible conduit.

With Bondnuts. Hinged strap fitting. Galvanized finish.

Open i.d.,  $\frac{41}{64}$ -inch; closed i.d.,  $\frac{1}{2}$ -inch; wire throat,  $\frac{15}{32}$ -inch; k.o. size,  $\frac{1}{2}$ -inch.

Packed 100 in standard package; 20 in carton.

Weight per standard package, 14 pounds.

No. 2208-EZ.....per 100 \$18.20

## No. 163 National Peepole Box Connectors

### Pitcher Lip Type

Fits 14-2, 14-3, 14-4, 12-2, 12-3, 10-2, and 4-1 armored cable; 6-1 armored lead cable; 14-2 and 14-3 plain lampcord; and  $\frac{3}{8}$ -inch flexible conduit.

With Peepole. No locknut; a simple angle lip inserted in knockout. By tightening screw, strong, firm box connection is formed; perfect ground. Firm holding clamp for cable.

Sherardized finish.

Made from best grade cold rolled open hearth steel.

Open I.D.,  $\frac{43}{64}$  inch; closed I.D.,  $\frac{17}{32}$  inch; wire throat,  $\frac{1}{2}$  inch; K.O. size,  $\frac{1}{2}$  inch.

Weight per standard package, 48 pounds.

No. 163.....per 100 \$3.60

## National Box Connectors EZ Hinged Strap Type

With Bondnut. Galvanized finish.

No. 2163-EZ fits 14-2, 14-3, 14-4, 12-2, 12-3, 10-2, 4-1 armored cable; 14-1, 12-1, 10-1, 8-1 armored lead cable; 14-2, 14-3 plain lampcord;  $\frac{1}{8}$ -inch flexible conduit. Also fits 14-2, 14-3, 12-2, 12-3, and 10-2 loom wire; 14-2 and 12-2 Ovalflex; 6-1 and

4-1 bare armored ground wire.

No. 2164-EZ fits 14-4, 12-3, 10-2, 4-1, 2-1 armored cable; 8-1, 6-1, 4-1 armored lead cable.

No.	Per 100	Open I.D. inches	Closed I.D. inches	Wire Throat inches	K. O. Size inches	Wt. per Std. Pkg. pounds
2163-EZ	\$4.60	$\frac{41}{64}$	$\frac{1}{2}$	$\frac{15}{32}$	$\frac{1}{2}$	80
2164-EZ	4.60	$\frac{11}{64}$	$\frac{35}{64}$	$\frac{17}{32}$	$\frac{1}{2}$	65

## National Box Connectors

### EZ Hinged Strap Type

EZ Strap is wide, strong and clamps cable more securely and strongly without contortion of cable. This point is particularly advantageous in use with flexible steel conduit.

Galvanized finish.

Furnished with bondnuts.

No.	Per 100	Open I.D. In.	Closed I.D. In.	Wire Throat In.	K.O. Size In.	Std. Pkg.	Car-ton	Wt. Lb. Std. Pkg.
2165-EZ	\$10.54	$\frac{3}{4}$	$\frac{37}{64}$	$\frac{17}{32}$	$\frac{1}{2}$	100	50	13

Fits 14-4, 12-3, 12-4, 10-2, 10-3 armored cable; 14-2 14-3, 14-4, 12-3, 12-4, 10-2 armored lead cable.

2169-EZ \$24.56  $\frac{117}{32}$   $\frac{1}{8}$  1 1 25 5 10

Fits 1-inch flexible conduit.

## No. 2175-EZ National Box Connectors

### Duplex Type

Fits 14-2, 14-3, 12-2, and 4-1 armored cable; and  $\frac{3}{8}$ -inch flexible conduit. For use in taking two armored cables into one  $\frac{1}{2}$ -inch knockout; simply tightening two screws holds the cables firmly and securely in place.

With Bondnut; hinged strap fitting.

Galvanized finish.

Open i.d.,  $\frac{41}{64}$ -inch; closed i.d.,  $\frac{1}{2}$ -inch; wire throat,  $\frac{9}{32}$ -inch; k.o. size,  $\frac{1}{2}$ -inch.

Packed 100 in a standard package; 20 in carton.

Weight per standard package, 17 pounds.

No. 2175-EZ.....per 100 \$13.00

## T &amp; B Squeeze Connectors

Malleable Iron—Galvanized

For Flexible Steel Conduit and Armored Conductors

Approved by Underwriters' Laboratories

Locknuts are furnished with connectors without charge.  
Nos. 250 and 252 have  $\frac{3}{8}$ -inch (pipe size) threaded ends to fit standard sockets.

Nos. 250 and 250A hold 14D solid, 12D solid, 10D solid, 8D solid, 14D solid, 8D solid, 16E and 18E conductors.

No.	Per 100	Size In.	Size K.O. In.	Open I.D. In.	Closed I.D. In.	Throat Bushed Diam., In.	Unit Pkg.	Std. Pkg.	Wt. Lb. per 100

## No. 239 T&amp;B Duplex Connectors

Approved by Underwriters' Laboratories

Designed to accommodate two armored cables in the same knockout to save labor, time, and materials. The fitting has a single opening. Both cables are securely wedged in place by a single screw.

Will hold 14-2, 14-3, 12-2, and  $\frac{3}{8}$ -inch flexible conduit.

Made of malleable iron, Tabolite plated.

Trade Size Inches	No.	Per 100	Approx. Open. Inches	Approx. Closed. Inches	Throat Bushed Diam. Inches	Car-ton	Std. Pkg.	Wt., Lb. per 100

## T &amp; B 45° and 90° Squeeze Connectors

Approved by Underwriters' Laboratories

Malleable Iron—Galvanized For Flexible Steel Conduit and Armored Conductors

Removable cap eliminates fishing wires and enables one to make a quick and sure connection.

Locknuts are furnished.

Nos. 265, 4466, and 266 hold 14-2, 14-3, 12-2; lead 14-2;  $\frac{3}{8}$ -inch flexible conduit and others.

## T&amp;B Squeeze Type Non-Watertight Connectors

For Non-Metallic Sheathed Cable and Flexible Tubing

Approved by Underwriters' Laboratories

PATENTED

Has an insert so held in place that it cannot accidentally be displaced but it can readily be removed without taking out the screw. The insert is so designed that the non-metallic flexible cable is held in the center of the connector so that when the strap is tightened down no sharp curve or bend is put in the conductor.

The insert presents a long bearing surface to the conductor. Connectors have threaded ends and are supplied with locknuts.

Connector is made of malleable iron. insert of steel, plated with Tabolite galvanizing.

No.	Per 100	K.O. Inches	—MADE TO HOLD— With Insert	Insert Removed	Unit Quan.	Std. Pkg.	Wt., Lb. per 100

**T&B Tite-Bite Connectors**

PATENTED  
For Armored and Non-Metallic Sheathed Cable  
Approved by Underwriters' Laboratories

Designed to hold non-metallic sheathed cable without cutting the fabric of the cable sheath.

No. 3100 takes non-metallic sheathed cable sizes 14W2, 14W3, 12W2, 12W3, and 10W2.

No. 3101 takes non-metallic sheathed cable sizes 14W2, 14W3, 12W2, 12W3, and 10W2; also all  $\frac{3}{8}$ -inch sizes of armored cable, 14-2, 14-3, 14-4, 12-2, 12-3, 10-2, 8-1, 6-1, 4-1; lead 14-2, 14-3, 6-1;  $\frac{3}{8}$ -inch flexible conduit; and others.

**T&B 2-Screw Connectors**

Approved by Underwriters' Laboratories

Precision made. All edges are rounded. No sharp burrs to harm conductors. The screws thread into the saddle, not the body. Made of steel, protected from corrosion with silvery Tabolite galvanizing.

No. 3301V fits any type cable: Armored Cable 14-2, 14-3, 14-4, 12-2, 12-3, 10-2, 8-1, (insul.) 6-1, 4-1; Flexible Conduit  $\frac{3}{8}$ -inch,  $\frac{1}{2}$ -inch; Non-Metallic Cable 14-2, 14-3, 12-2, 12-3, 10-2; Service Entrance Cable 12-2, 12-3, 10-2, 8-2, 4-2; or any cable .310 to .650-inch diameter.

No. 3302 fits non-metallic sheathed cables: Non-Metallic Cable 14-2, 14-3, 12-2, 12-3, 10-2; Service Entrance Cable 12-2, 12-3, 10-2, 8-2, 6-2, 4-2; or any non-metallic cable .310 to .650-inch diameter.

No. 3303 fits non-metallic sheathed cables: Non-Metallic Cable 12-3, 12-3, 10-3, 8-2; Service Entrance Cable 10-3, 8-3, 6-2, 6-3, 4-2, 2-2; or any non-metallic cable .450 to .760-inch diameter.

No. 3304 fits non-metallic sheathed cables: Non-Metallic Cable 6-2, 4-2; Service Entrance Cable 8-3, 6-3, 4-3; or any non-metallic cable .530 to .950-inch diameter.

## No. 3300 T&amp;B 2-Screw Connectors

This small, compact connector is suited for use with bare armored ground wire (8-1, 6-1 or 4-1). It will also take rubber jacketed portable cords or any type of cable having an outside diameter of  $\frac{3}{16}$  to  $\frac{1}{2}$  inch.

## T&amp;B Watertight Box Connectors

## Two-Screw Type

Approved by Underwriters' Laboratories

Easily tightened on the cable by the two screws.

Cap gives maximum protection to the rubber bushing.

Made of malleable iron. Cap is hot dip galvanized finish; body Tabolite finish.

Carton, 10.

Standard package, 100.

## No. 2020 T&amp;B Connectors

PATENT PENDING

Approved by Underwriters' Laboratories

Pinch sides of connector and it will snap into the knockout hole—inside or outside the box. Grooves hold it in place.

To fasten the cable turn down the screw. Clamp forces cable against walls of connector and they expand, tightly gripping knockout so that connector cannot pull out. Screw cannot touch the cable.

No rough edges or projections to cut into fiber armor, and connector protects fiber from the rough edges of the knockout opening. Long, rounded bearing surfaces eliminate possibility of injury to cable. Rounded shoulders are presented to conductors as they are bent up to the outlet.

Made to hold non-metallic cable 14-2, 14-3, 12-2, 12-3, 10-2, 10-3; and others.

## Ideal Fish Tape, Reels and Pullers

Three tools in one: a reel, a puller and a tape. Tape is pulled through the conduit and reeled in one operation; reel automatically locks tape in place. By keeping the tape reeled up, it is prevented from spreading all over the job, avoiding breakage and possibility of tape contacting live parts.

No.	Each	Tape Length Feet	Tape Size Inches
31-007	\$1.91	50	$\frac{1}{8}$ x.045 ( $\frac{3}{64}$ )
31-008	3.18	50	$\frac{1}{8}$ x.060 ( $\frac{1}{16}$ )
31-009	6.22	100	$\frac{1}{8}$ x.060 ( $\frac{1}{16}$ )
31-010	6.85	100	$\frac{3}{16}$ x.060 ( $\frac{1}{16}$ )
31-011	7.49	100	$\frac{1}{4}$ x.060 ( $\frac{1}{16}$ )
31-012	6.22	100	$\frac{1}{8}$ x.030 ( $\frac{1}{32}$ )
31-013	6.22	100	$\frac{3}{16}$ x.030 ( $\frac{1}{32}$ )
31-014	6.22	100	$\frac{1}{4}$ x.030 ( $\frac{1}{32}$ )
31-016	9.18	200	$\frac{1}{8}$ x.060 ( $\frac{1}{16}$ )

## Ideal Fish Tapes

Ideal Fish Tape is made of the highest grade of tempered spring steel wire—no curling. Tape is flexible and easy to use on long runs of conduit having several bends.

All sizes are available in any length, multiples of 50 feet.

Packed in individual cartons.

No.	Per 100 Ft.	Tape Size Inches
31-057	\$1.60	$\frac{1}{8}$ x.030 ( $\frac{1}{32}$ )
31-064	2.19	$\frac{3}{16}$ x.030 ( $\frac{1}{32}$ )
31-071	2.39	$\frac{1}{4}$ x.030 ( $\frac{1}{32}$ )
31-036	2.19	$\frac{1}{8}$ x.060 ( $\frac{1}{16}$ )
31-043	2.88	$\frac{3}{16}$ x.060 ( $\frac{1}{16}$ )
31-050	3.53	$\frac{1}{4}$ x.060 ( $\frac{1}{16}$ )

## Steel City Superior Fish Wire

Flat shape of this wire makes it flexible, suitable for long runs of conduit having several bends. Tempering prevents the wire from curling after constant use.

**Heavy.**—For hand fishing.

**Light.**—For conduit fishing machines. Can also be used by hand for short runs of conduit where a stiff wire is not essential.

**Extra Heavy.**—Adapted for fishing heavy wire and cable. Used by plumbers for soil pipe cleaning and where a strong wire is necessary.

Furnished in an assortment of cut lengths in coils of 100 feet or more, or in reels holding from 2000 to 4000 feet according to size of wire. Heavy type is packed in individual cartons.

## No. 101 N-E-Bend Snake Leaders

For .060x $\frac{1}{8}$ -Inch Fish Tape

Designed to permanently attach to the electrician's fish tape. A flexible end to aid in leading the fish tape around difficult bends in both rigid and flexible conduit.

Pulling test over 750 pounds.

Inner assembly consists of the nose end and tail cap attached by a strong aircraft cable, assuring strength required to pull the wire through the conduit.

The coiled music wire spring gives flexibility and long life. Plated to avoid rusting.

Packed 10 in a box.

No. 101.....each \$2.75

## No. 1629 Klein Pullers

A lightweight strong puller which can be carried in the vest pocket.

Weight each, 3 $\frac{1}{2}$  ounces.

For Fish Tape

No. 1629.....each \$3.00

No. 12 Iron Wire

No. 1629A.....each 3.00

## T&amp;B Fish Wire

Furnished with patented ball-points which enables the wire to run sharpest bends with ease. Tempered steel wire, with rounded edges. Strong and flexible.

Furnished in 50, 100, 150, or 200-foot coils.

Packed 1000 feet in a standard package.

No.	Per 100 Ft.	Wire Size In.	—APPROX. WT., LB. PER 1000 FT.—			
			50-Ft. Coils	100-Ft. Coils	150-Ft. Coils	200-Ft. Coils

*3604	2.50	$\frac{1}{4}$ x.030	48	37	34	32

Size listed above furnished without balls when specified.

## Separate Fish Tape Balls

Fit any standard make of fish wire. To assemble, put end of fish wire in a vise. Tap lightly with hammer until flattened. Then slip end of fish wire into slot in threaded insert and screw ball on to insert.

Packed 10 in a unit quantity, 100 in a standard package.

No.	Per 100	For Wire Size, In.	Wt., Lb. Per 100

\*Cannot be fished through  $\frac{1}{2}$ -inch conduit.

### E.M.T. Hickeys For Thin Wall Conduit

An excellent tool for stubbing-up in concrete work and for making short or close bends.

Makes bends of any desired radius. To insure against kinking, the tube should be inched through, not more than 10 degrees being pulled at a time.

Standard package, 1.

No.	2195	2196	2197	2198	2199	2200

### Appleton Tiger-Grip Hickeys and Couplings

Schedule CF  
Cadmium Finish

No. 7290 Hickey

No. 7295 Coupling

No. 7291 Hickey

The jaws grip with a set of sharp steel teeth in the lower jaw and do not slip. The coupling attachment strengthens the hold on the handle and prevents breakage. One tool takes care of all sizes of conduit up to and including 3/4-inch, and for the 1-inch conduit the hickey and sleeve coupling have been combined in one casting.

#### No. 7290 Hickeys

No.	For Conduit Inches	Car-ton	Std. Pkg.	Wt. Lb. Std. Pkg.
7290	1/2 and 3/4	1	10	19

#### No. 7291 Hickeys with Couplings

#### No. 7295 Sleeve Couplings

No. 7296 jaws are available for Tiger-Grip Hickeys.

### T&B Lakin Conduit Hickeys

Shank has a bushed hole into which end of conduit enters when a short bend is made at its end or a bend is to be worked down. Bushed opening in shank fits snugly over end of conduit and protects threads.

Will not slip on conduit while a bend is being made.

It enables a workman to make bends having different curvatures. It will not kink pipe when making shortest practical bends. Made of malleable iron. Galvanized finish.

No.	Each	Size In.	Unit Quan.	Std. Pkg.	Wt., Lb. per 100
335	\$1.75	1/2	1	10	190
*336	2.25	3/4	1	10	220
337	3.25	1	1	2	520

\*Can be used to bend 1/2-inch pipe.

### T&B Reinforced Lakin Hickeys

For Standard Rigid Conduit

Has a solid steel bar running through the shank and into the pipe handle, which strengthens the threaded section.

No.	Per 100	Size In.	Unit Quan.	Std. Pkg.	Wt., Lb. per 100
360	\$2.50	1/2	1	10	250
*361	3.50	3/4	1	10	300
362	6.00	1	1	2	600

\*Can be used to bend 1/2-inch pipe.

### T&B Hickey Type Benders

For Thinwall Conduit (E.M.T.)

Makes bends of any desired radius. To insure against kinking tubing, not more than 10° should be pulled at a time.

No.	Each	Size In.	Std. Pkg.	Wt., Lb. per 100
4185	\$2.50	1/2	1	2
4186	3.90	3/4	1	3.5
4187	5.00	1	1	5

### Appleton Bending Tools

Schedule TW

Especially designed for bending electrical metallic tubing. Makes bends in exactly the right place and with very little effort.

No.	14195	14196	14197

### Greenlee Hydraulic Benders

#### For Rigid Conduit, Pipe and Thin-Wall Steel Tubing

No. 770 will bend 1 1/4, 1 1/2, 2, and pipe. No. 775 with standard 3, 3 1/2, 4 and 4 1/2-inch conduit and double extra strong pipe can what smaller sizes, and special at-furnished for bending boiler tubes tubing of various materials and in 2 1/2 and 3-inch conduit equipment will bend pipe. Extra strong also bent in some attachments can be and heavy-wall various sizes.

Maximum piston pressure of No. 770 is 50,000 pounds and of No. 775, 80,000 pounds. Each bender has a safety valve to blow out at pressures exceeding capacity of power unit. All sizes of conduit within range of each machine can be bent cold, without use of heat or filler. Machine operates horizontally on the floor.

No. 770-T bends thin-wall electric metallic tubing quickly and without crushing. It is so designed that a full 90° bend can be made with one complete forward movement of the ram.

No. 770 Rigid Conduit Bender for 1 1/4 to 3-Inch, Shipping Weight, 198 Pounds.....each	\$170.00
No. 775 Rigid Conduit Bender for 3 to 4 1/2-Inch, Shipping Weight, 370 Pounds.....each	235.00

Set of Standard Attachments for Thin Wall Conduit, Shipping Weight, 190 Pounds.....each	120.00

### No. 763 Greenlee Steel Tubing Benders

Developed to bend steel tubing without kinking and flattening the tube. Will make smooth, even bends to a center-line radius of two and one-half times the outside diameters.

The follow bar, connecting bars, roller, clamp, shafts and eccentric lever are of high-grade steel, heat treated. Head or bending die milled to correct radius with accurately shaped groove for bending up to and including 180°.

O.D. Tubing Inches	Each	Radius Inches	Wt. Lb.	O.D. Tubing Inches	Each	Radius Inches	Wt. Lb.
1/4	\$10.00	5/8	3 1/4	5/8	\$14.00	1 1/16	6 1/2

### Greenlee Knockout Punches

For cutting holes in metal having a thickness up to 1/8 inch or 10 gage. Ordinary wrench will drive all units.

No. 735 consists of 4 punches for cutting 1/8, 1 1/2, 1 1/4 and 1 1/8-inch holes for 1/2, 3/4, 1, and 1 1/4-inch conduit.

No. 737 consists of 2 punches for cutting 1 1/8 and 2 3/8-inch holes to take 1 1/2 and 2-inch conduit.

No. 738 cuts a 2 3/8-inch hole for 2 1/2-inch conduit. Drive is by a double diameter screw and nut.

No. 739 cuts a 3 1/2-inch hole for 3-inch conduit. Drive is by a double diameter screw and nut.

No.	735	737	738	739
Each.....	\$10.00	10.00	14.00	19.00
Weight.....pounds	2 3/4	4 1/4	5 3/4	7 1/4

### No. 740 Greenlee Knockout Cutters

Will handle the enlargement of knockouts to accommodate 1 1/2, 2, 2 1/2, and 3-inch conduit. It will cut material up to 1/8-inch or 10-gage thickness, and the operation can be performed in about 1 1/2 minutes.

Tool is hand driven; any ordinary wrench can be used.

The cutting is done by the drive action of two wheel cutters, mounted on a horizontal shaft in the body.

The center shaft of the tool is 3/4-inch diameter for passing through standard knockouts.

Packed in leather case.

Weight, 4 1/2 pounds.

No. 740.....each \$15.00

### Nye Spiral Fluted Bit Brace Reamers

#### Taper Shank

Made of high grade tool steel, drop forged.

This reamer is made with a tapered shank to fit any standard bit brace. Spiral flutes give a shearing action, assuring operator of a clean and satisfactory job.

**Nye Receding Die Stocks**

Capacity, 1 to 2-Inch Pipe

Constructed on the receding die principle, therefore threads pipe very easily.

Set consists of stock handles, guides and set of 1 to 2-inch dies. Stock of malleable iron; dies of finest grade tool steel.

Furnished in Briggs (American) and Whitworth (English)

standards, right hand. American Standard furnished unless otherwise specified.

**No. 1**

### No. 88 Nye Convertible Combination Vises and Stands

Capacity, Up to 4 Inch Pipe

No. 88-A With Yoke Vise

Made of malleable iron.

Base designed so yoke vise parts,  $\frac{1}{2}$  to  $2\frac{1}{2}$  inches can be replaced by chain vise parts, 1 to 4 inches, or vice versa.

Base has lip and slots for hanging tools, pipe rest and provision for oil can in handy position.

Hole in rear of base tapped for standard 1-inch pipe threads, to

accommodate extension pipe rest arrangement.  
 Can also be used for bending  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch pipe.  
 Locking arrangement for each leg for both open and closed positions, no chain required.

### Nye Tube Cutters with Rollers

No. 20

Used by plumbers, electricians, refrigerator repair men, and automobile mechanics for cutting copper, brass and lead tubing.

Roller reduces friction to the extent that tubing is not marred or torn during cutting operation. Wheel with finely

ground edge leaves a slight burr, easily removed by reamer.

No.....	<b>10</b>	<b>20</b>	<b>30</b>
Each.....	<b>\$1.75</b>	<b>\$2.45</b>	<b>\$3.25</b>

## Nye Drop-Forged Steel Pipe Cutters

### Trimo Type

Can be used as a one or three-wheel pipe cutter. Furnished with two rollers and one Nye Thin Blade Smooth Cutter Wheel. No thread in frame to wear out.

Adjustment of the handle screw is made through a case-hardened nut which can easily be replaced when worn.

Size No.	1T	2T	3T

## Beaver Square-End Knife Pipe Cutters

No. 1,  $\frac{1}{8}$  to 1 Inch

No. 5,  $\frac{1}{2}$  to 2 Inch

For cutting, grooving or beveling pipe.

This pipe cutter cuts like a lathe tool, each turn removing a thin shaving until the pipe is severed. Leaves no burr to be reamed or filed, or to reduce the capacity of the pipe, and threading dies start easily and with less wear.

No.	1	5
Complete	each \$16.50	\$17.50
Extra Cutting Knives	per set 1.00	1.50
Grooving Knives	per set	2.50
Beveling Knives	per set	3.50

Cuts Pipe	inches $\frac{1}{8}$ -1	$\frac{1}{2}$ -2

## No. 2 Beaver Open Ratchet Die Stocks

For  $\frac{1}{8}$  to  $\frac{3}{4}$ -Inch Pipe— $\frac{1}{4}$  to 1-Inch Bolts

Openings between dies for easy oiling and chip clearance. Square dies, no weak offset to break. Die segments interchangeable, easily re-sharpened, reversible for threading pipe too short to pass through die head.

Right or left hand.

### No. 2 Complete, for Pipe Only

Size	$\frac{1}{2}$ - $\frac{3}{4}$ inches	$\frac{3}{8}$ - $\frac{3}{4}$	$\frac{1}{4}$ - $\frac{3}{4}$	$\frac{1}{8}$ - $\frac{3}{4}$

## Beaver Threading Oil

### For Hand Tools and Threading Machines

A sulphur-base threading oil (high in heat-absorbing properties) that both cools and lubricates. Improper oil causes overheating, chipped dies and bad threads.

Size Can.	gal.	1	5	15	30	55
Each		\$1.50	7.50	19.50	37.50	66.00

## Beaver Pipe and Bolt Machines

Capacity:  $\frac{1}{8}$  to 2-Inch Pipe;  $\frac{1}{4}$  to 2-Inch Bolts

$2\frac{1}{2}$  to 12-Inch Pipe with Shaft and Geared Tools

### Model A

A heavy duty, portable machine for right hand operation. Has 12-inch free working space and a 3-jaw universal chuck which is used with an automatic chuck wrench ejector. Dieheads are of the solid ring type.

### Model B

A light, compact unit for field use by plumbing, heating electrical, and sprinkler contractors.

For right hand operation.

Has 13-inch open working space and a full-range universal chuck with automatic safety chuck wrench ejector.

Furnished with ring type dieheads.

Both Models are furnished complete with 110 or 220-volt universal reversible motor for light line service, a.c. or d.c., 25 to 60 cycles; reversing switch; reversible oil pump;  $\frac{1}{8}$  to 2-inch hinged cone-type reamer; ball bearing self-centering wheel and roller cutoff suitable for pipe or bolts; and one gallon of threading oil.

Prices upon application.

## Model C Beaver Power Unit

Capacity:  $\frac{1}{8}$  to 2-Inch Pipe;  $\frac{1}{4}$  to  $1\frac{1}{2}$ -Inch Bolts;  $2\frac{1}{2}$  to 8-Inch Pipe with Drive Shaft and Geared Tools

Model C-1

Model C-2 with Vise

A sturdy power unit for bench use; makes machines of hand tools. Model C-2 is recommended if a pipe vise is required. Where a pipe vise is unnecessary, Model C-1 is more convenient to use.

Cushman all-steel universal geared chuck. Machine is equipped with an automatic safety chuck wrench ejector,

chuck wrench holder, and a safety latch. Gears are fully enclosed; the main driving gear revolves through an oil bath. Chuck is opened and closed by turning a chuck wrench, and chuck remains stationary.

Black & Decker universal motor,  $\frac{1}{2}$  hp. nominal rating (actual developed power, 1.59 hp.). Motor will operate on either a.c. or d.c., 25 to 60 cycles. Choice of 110 or 220-volt motor; specify when ordering.

Base, 18x18 inches; height,  $12\frac{1}{2}$  inches. Base dimensions, mounted on legs, 42x46 inches.

Model C-1, No Provision for Vise; Net Weight 140

Pounds; Shipping Weight, 167 Pounds.....each \$185.00

Model C-2, without Vise; Net Weight, 166 Pounds;

Shipping Weight, 193 Pounds.....each 200.00

Model C-2, with Vise and Pipe Rest; Shipping

Weight, 204 Pounds.....each 210.00

**No. 888 National La-In Metal Molding**

Approved by Underwriters' Laboratories, Inc.

For main runs branching into No. 333 molding or No. 111 Xtensionduct.

Made in two pieces, base and capping, so formed as to snap together, capping snapping over base.

Wires are laid-in, not fished.

Designed to hold wires in place and allow capping to be snapped on easily and securely.

Capacity: 10 No. 14, 10 No. 12, 10 No. 10, 7 No. 8 or 3 No. 6 wires.

For 10 wires;  $1\frac{3}{4}$  inches wide,  $\frac{1}{16}$  inches high, and 100 inches long.

Has mounting holes in base for No. 8 screws or toggles on 12-inch centers.

Furnished with 3 wire retaining clips for each length. Neutral gray finish. May be painted to match walls or ceiling, or grained to match woodwork.

Packed 12 lengths (100 feet) in a sealed container.

Carton, 100 feet. Standard package, 1000 feet.

Weight per standard package, 616 pounds.

No. 888.....per 100 feet **\$28.00**

**No. 888 National Metal Molding Fittings****No. 841 Wire Retaining Clips**

Holds wires in place until capping is installed.

Three clips are furnished without charge with each length.

**No. 854 Couplings**

Carton, 10.

## National 3-Wire Ovalduct

Ovalduct is a flat raceway for extension work on the walls and ceilings of fireproof buildings. It is a rigid tube formed from sheet steel.

Ovalduct is installed without channelling the underlying concrete, tile, or brick. It can be laid in a shallow groove in the plaster, and fastened to the ceiling or wall with straps and wire toggles provided for the purpose, or with short tie wires which are fished through small holes drilled in tile on each side of duct. It is shallow enough that plaster of ordinary thickness will completely cover it.

The Ovalduct line includes elbows, couplings, and boxes to take care of any wiring situation, and connectors which permit this raceway to be installed in conjunction with any other type of raceway or wiring system. All fittings are especially designed for the purpose and are easily installed. Approved by the Underwriters' Laboratories.

Nominal outside over all dimensions are 1 3/32 inch high, 1 1/2 inch wide and 10 feet long.

Standard package, 100 feet.  
Weight per 100 feet, 35 pounds.

Per 1000 Feet..... \$20.00

------	--------	----	------	---

### No. 4170-S1 Sectional Switch Boxes

Galvanized.  
Size, 4x2x 1 1/2 inches; 1 oval K.O. each end; 2 oval K.O.'s 1 side; one 1/2-inch and one 3/8-inch K.O. on opposite side.

4170-S1	\$30.60	1	50	30
---------	---------	---	----	----

### No. 2137 90° Internal Elbows

Set screw for securing Ovalduct on each end.

Radius, 2 3/8 inch. Offset back to end, 2 1/8 inches.

2137	\$53.50	25	100	17
------	---------	----	-----	----

### No. 2134 90° Internal Elbows

Fits No. 2133 coupling and Nos. 2156, 401, and 2181 connectors.

Radius, 1 1/4 inches. Offset, back to end, approximately 2 1/2 inches.

2134	\$28.52	25	100	15
------	---------	----	-----	----

### No. 2180 Box Connectors

With 1/2-inch Bondnut. Will take Ovalduct into conduit or 1/2-inch K.O.'s.

2180	\$16.00	10	100	14
------	---------	----	-----	----

## National Florduct

No. 711-A

No. 733-A

Florduct makes practical surface floor wiring across aisles and will stand the abuse of hand trucks and general office traffic. Consists of two pieces, base and capping so formed as to snap together, the capping snapping over the base. Capping is a ramp like plate offering the minimum of obstruction.

Neutral gray finish can be painted to match or harmonize with any given surface.

**No. 711A** capacity, 3 No. 12 or 14 wires, 6 No. 16 wires, 8 No. 18 wires. Four twisted pairs inside telephone wires; 20 annunciator wires.

**No. 733-A** capacity, 3 No. 6 wires, 7 No. 8 wires, 10 No. 10, 12 or 14 wires, 20 No. 16 wires, 24 No. 18 wires. Eight twisted pair inside telephone wires. Cable up to 26 pair; 50 annunciator wires.

Unit package, 8 $\frac{1}{4}$  feet. Standard package, 100 feet.  
No. 711-A, Wt. Std. Pkg., 38 Lb. .... per 100 feet **\$24.00**  
No. 733-A, Wt. Std. Pkg., 78 Lb. .... per 100 feet **27.20**

**No. 1708 Fixture and Drop Cord Covers**

Has combination ½-inch knockouts and drop cord eyelet.

Carton, 1. Standard package, 10.

Weight per standard package, 4½ pounds.

No. 1708.....per 100 \$30.00

**No. LT-606 National Lopo-Trim Raceways**

A hollow steel quarter-round raceway used to carry low potential wires such as telephone, inter-communication, and buzzer on top of the baseboard. Also used as a toe-plate where wall or baseboard meet, as a low potential wiring raceway at chair-rail moulding, and as a quarter-round trim above or beneath (or both) installations of Plug-In Strip.

Steel prongs exert a tension that holds the trim snugly in place.

Wiring can be brought out anywhere along the raceway. Merely drill a hole through the rounded surface, insert a standard grommet, and bring the wires out.

Furnished in six-foot sections which match perfectly for continuous installation. Sections are cut to fit and corners are mitered identically like wood quarter-round.

Cross-sectional dimensions: 1¼x¾ inches.

Has neutral satin gray finish, matching Plug-In Strip, and harmonizes with all tones used in interior decoration. Can be repainted to match baseboard, floor, or walls.

Standard package, 17 six-foot lengths. Weight per standard package, 20 pounds.

No. LT-606.....per six-foot length \$1.32

## National Plug-In Strips

6-Foot Length, With Outlet Every 18 Inches  
No. CF2-606-18

3-Foot Length, With Five Outlets on 6-Inch Spacing  
No. CF2-603-6

Available in 6-foot lengths with outlets every 18 inches. Also available in 3-foot lengths with five outlets on 6-inch spacing. May be installed on top of the baseboard or may be mounted directly on the surface. May be cut to fit right on the job and is connected together by means of connection blocks which are furnished with each unit. (Except end blank.)

Listed and approved by the Hydro Power Commission, the Underwriters' Laboratories, Inc., and complies with the regulations of the National Electric Code.

The baked enamel satin gray finish blends with any color of interior decoration. May also be repainted to desired shade or color.

Furnished with 2 No. CF2-607 mounting clips and 3 No. CF2-645 mounting straps.

Carton, 1 length. Standard package, 10 lengths.

No.	CF2-606-18	CF2-603-6

## No. 109 Coupling

For use with box connector or elbows to  $\frac{1}{2}$ -inch conduit.

No.	Std. Pkg.	Wt. Lb. Std. Pkg.
109	100	5

## Appleton Ovaltube Fittings

Schedule OT

### No. 110 Toggles

With Wire Fastener

Used for holding tile, plasterboard, wire lath, etc., for supporting Ovaltube, Ovalduct, and Ovalflex.

No.	Standard Package	Weight Pounds Standard Package
110	500	12

### No. 115 Strap Fasteners

No.	Standard Package	Weight Pounds Standard Package
115	1000	9

### Fishing Cable

Coil the loop around hand until the bail pulls against spiral housing. Doing this will adjust the rigidity to meet the hardest kind of fishing.

Cable has been tested around five 90-degree elbows and six 45-degree elbows in a run of Ovalduct 20 feet long.

No.	SIZE, INCHES		Length Feet	Std. Pkg. Lengths Feet
	Cable	Spiral Housing		
201	1/16	3/16	25	10
202	1/16	3/16	50	10
203	3/32	3/16	100	5

### No. 215-A Hickey Type Benders

Made to form tubing on the narrow edge to a 90-degree perfect bend. No inching of the tube is required.

The upper portion of the bender is designed for the purpose of offsetting Ovaltube on the flat side without kinking.

It is essential, on Ovaltube installations, that the tube be free from kinks when pulling circuit wires to keep tube in perfect condition.

### Stub Concrete Nails

Used for fastening Ovaltube to concrete or brick walls. Standard package, 6-pound bags.

## No. 200 Wiremold Raceways

Made of .025-inch steel.

Standard finish. Wiremold buff.

Furnished in 5-foot lengths.

Packed 100 feet in a carton. Weight per 1000 feet, 180 pounds.

## Appleton Solid Conduit Gang Switch Boxes

Schedule OB

Galvanized Finish Only

Solid Gang—Deep Type

With 3/4 or 1/4-Inch Deep Covers

GSB-4 Box with GSC-4 Cover

GSC-4 Cover

Made from 14-gage steel. Cover has mounting centers to accommodate all standard push button switches, toggle switches, receptacles, etc.

Switch centers are 3 3/32 inches and center lines are 1 13/16 inches apart.

Outside dimensions of box complete with cover are: with deep cover, 4 1/8 inches wide, 2 3/4 inches deep; with shallow cover, 4 1/8 inches wide, 2 1/4 inches deep. Depth of box only, 2 inches. Has slots to take LVP partitions.

In addition to one knockout for each gang, there are two additional knockouts in each side of the 2 to 8-gang boxes. For example: A 2-gang box will have four knockouts in each side, a 3-gang box will have five knockouts in each side.

Boxes and covers are listed separately.

Galvanized finish only.

## Appleton Combination Boxes

Schedule OB

With Two No. CL-18 Outside Clamps and Ears  
Black Enameled—Galvanized

For Flexible Steel Conduit and Armored Cable with 1940 Code Rubber Insulation, Type T Insulation, and 1947 Code Rubber Insulation

Has two clamps on the outside allowing more room for wiring and for splicing. Clamps are riveted to boxes, which insures a positive ground.

Screws in clamps are staked to prevent removal or falling out in transit.

## Appleton Combination Boxes

Schedule OB

## With Side Mounting Ears

These boxes meet the requirements of many territories where the installation of outlet and combination boxes require furring strips at each ceiling outlet to support cut ends of the laths. These furring strips afford an ideal support for outlet boxes; therefore, boxes must have these mounting ears so they may be attached directly to the furring strips and thereby eliminate the additional expense of bar hangers.

Will not tip or rock after installation and eliminate the possible hazard of cracked plaster.

All boxes have ears. No. 550-LFSXE furnished with  $\frac{3}{8}$ -inch fixture stud.

Standard package, 100.

### National Economy Bar Hangers

#### No. 2263 Straight

For shallow boxes in new work, or for holding boxes to concrete forms. Will fit any box having  $\frac{1}{2}$ -inch knockout.

With  $\frac{1}{2}$ -inch deep boxes where bar is nailed to joints or studding, edge of box will be flush with ordinary plaster.

No.	Per 100	Length Bar, In.	Std. Pkg.	Wt. Lb.
2263	\$14.50	18	50	26

#### No. 2265 Shallow Offset

For  $\frac{1}{2}$ -inch deep boxes without switch covers or plaster rings; offset brings box edge flush with plaster. Will fit any box having  $\frac{1}{2}$ -inch knockout. Offset,  $1\frac{1}{16}$  inches deep.

2265	\$17.00	19 $\frac{1}{2}$	50	32
------	---------	------------------	----	----

#### No. 2266 Deep Offset

For  $\frac{1}{2}$ -inch deep boxes with switch covers or plaster rings; offset brings covers  $\frac{5}{8}$ -inch high, flush with plaster. Will fit any box having  $\frac{1}{2}$ -inch knockout. Offset,  $1\frac{1}{16}$  inches deep.

2266	\$17.00	19 $\frac{1}{2}$	50	33
------	---------	------------------	----	----

#### No. 2268 Box Cleat

For  $\frac{1}{2}$ -inch deep boxes with covers and integral studs, or without studs. Offset has slots for stove bolts to hold box, and is right depth to bring  $\frac{5}{8}$ -inch covers flush with plaster. Offset,  $1\frac{1}{16}$  inches deep.

2268	\$10.50	21	50	27
------	---------	----	----	----

### National Redege Economy Boxes

No. 2765 Economy Boxes for armored cable and Nos. 2966 and 2365-D for armored cable, loom or loom wire are furnished mounted on offset bars, 19 $\frac{1}{2}$  inches long with offset of  $\frac{1}{16}$  inches bringing edge of box flush with plaster line for an installation where no box cover is to be used.

The boxes are fastened on offset bars by a diagonal saddle clamp allowing bar to cross bottom of box without obstructing knockouts.

Galvanized finish.

Packed 25 in standard package.

#### No. 3814-FS

Diameter, 3 $\frac{3}{8}$  inches; 1 $\frac{1}{2}$  inches deep; 4-cable knockouts in bottom; 4-cable and two  $\frac{1}{2}$ -inch conduit knockouts in sides; 2 hole, 1 screw clamp. Duplex cable clamps,  $\frac{3}{8}$ -inch fixture stud; with cover lugs.

### National Redege Switch Boxes Interchangeable Sectional

For A.B.C. armored cable, loom and loom wire.

Cable knockouts take 14/2, 14/3, 12/2, and 12/3 armored cable and loom wire. Two one-piece all-purpose clamps. Square corners.

Galvanized finish.

Packed 50 in a standard package.

**No. 7**

With two 2 3/4-inch cable knockouts in ends, two in sides; 1/2-inch knockout in bottom. Depth, 2 inches.

Weight per standard package, 32 pounds.

No. 7.....per 100 \$21.00

**No. 12**

With two 2 3/4-inch cable knockouts in ends; two in sides; 1/2-inch knockout in bottom; two one-piece all-purpose clamps.

Depth, 2 1/2 inches.

Weight per standard package, 37 pounds.

No. 12.....per 100 \$21.70

**No. 12-SB**

This is No. 12 with weld-on stud bracket and lath support.

With 2 one-piece all-purpose clamps.

Depth, 2 1/2 inches.

Weight per standard package, 46 pounds.

No. 12-SB.....per 100 \$29.50

**No. 12-X**

No. 12 with extended ears.

With 2 one-piece all-purpose clamps.

Depth, 2 1/2 inches.

Weight per standard package, 45 pounds.

No. 12-X.....per 100 \$24.50

### No. 4170 National Redege Switch Boxes

#### Sectional

For shallow type switches and devices.  
For rigid conduit and A.B.C. armored cable.

Square corners.

With one 1/2-inch conduit knockout in sides, ends and bottom; one 2 3/4-inch cable knockout in each side. No supporting ears on box. Depth, 1 1/2 inches.

Galvanized finish.

Standard package, 50; weight 28 pounds.

No. 4710.....per 100 \$27.50

## National Redege Gang Boxes

Suitable holes are provided in the bottom for nails.  
Galvanized finish.

## Appleton VB Bracket Switch Boxes

Schedule SB

Without Lath Support

Black Enameled—Galvanized

For Non-Metallic Sheathed Cable with Type T or 1947 Code Rubber Insulation and Non-Metallic Flexible Tubing

Used in Wall Board, Beaver Board, Veneer Board and Plaster Board Construction

No. 44-VB

No. 385-VB

No. 387-VB

Plastered wall construction has given away, to a large extent, to the popularity of wall board, veneer board and similar type of construction.

In order to simplify the electricians' work in installations using wall board or veneer board, the VB Bracket Switch Box provides a simple solution to what ordinarily is a rather complicated task. The flat type VB bracket spot welded onto the long side of a standard switch box provides an easy means of solidly mounting the switch box to the wide side of a two-by-four, thus eliminating the need for channeling out the wall board or the studding. The VB Bracket Switch Box is easily fixed into place so that the edges of the switch box come perfectly flush with the outer surface of the board.

May also be used under  $\frac{3}{4}$ -inch Celotex or boards having a thickness up to  $\frac{1}{8}$ -inch.

No.	Depth Inches	Box Used	Clamps (Two)	Std. Pkg.	Wt. Lb. per 100

## Appleton Solid Gang Switch Box Covers

Schedule SB

Galvanized Finish Only—2, 3, 4, 5 and 6-Gang

Furnished with fastening screws.

Combination Covers

In ordering describe the combinations by giving the Nos. of the component covers from left to right in order of arrangement desired. Example: An order for 50 three-gang covers for flush mounting, for push button switch, pilot lamp and round flush receptacle, arranged from left to right in order given, should read: 50 flush covers, combination FRK, for three-gang solid switch box.

The price of any combination cover is the sum of the prices of the component covers listed plus a flat charge per gang.

No. F

No. PS3

For double push button switches.

For P & S-Despard, Bryant IL, and Hubbell Interchangeable Line (for 2 or 3 devices).

No. J

No. Q

For round flush receptacles, (without lift cover).

For sign receptacles with removable ring (1 $\frac{1}{2}$ -inch hole).

No. K

No. R

For round flush receptacles, (with lift cover).

For pilot lamp receptacle, with ruby jewel.

No. O

No. S

For standard duplex flush receptacles.

For Arrow, Bryant, Connecticut and G-E Tumbler and toggle switches.

No. PS1

No. X

For P & S-Despard, Bryant IL, and Hubbell Interchangeable Line (for 1 device).

Blank metal.

## Appleton Laundry Fittings

Schedule SB

Black Enamel or Galvanized  
With Single or Duplex Receptacles

No. 1460

These fittings are furnished in single gang, in sectional style which permits removing sides, and they can be built into any number of gangs necessary.

Each section is provided with a hinged door and lugs which will permit of using an ordinary small padlock. Padlock is not furnished.

## Appleton Switch Box Supports

Schedule SB

## Kruse Type

Used for new work on any standard switch box.

No.	Description	Std. Wt. Lb. Pkg. per 100
897	Two 16 1/2-Inch Strips and Lath Support	*500 40
898	Two 18 1/2-Inch Strips and Lath Support	*500 50

\*Sets.

## No. 896 E-Z-IN Type

The E-Z-In switch box support solves the problem of mounting switch boxes to beaverboard, sheet-rock, metal lath, etc. Suitable for old house wiring using lath and plaster, and will take standard switch boxes of any number of gangs.

After cutting an opening in the wall just large enough to admit switch box, insert E-Z-In switch box support, one on each side of opening for switch box, and bend over the two projections against the wall on the outside which serve to fasten the switch box support temporarily until the box is inserted.

The box can then be inserted in wall in the usual manner, making sure to press ears of box firmly against the wall then while still pressing against box, bend over the two projections of the switch box supports down over the sides into the box, securely anchoring the box in wall constructed of any material. It is unnecessary to countersink the ears of the box and no screws are required. The switch or receptacle plate will lie flat on the surface of walls.

Standard package, 1000.

Weight per 1000, 43 1/2 pounds.

## No. 895 Switch Box Clips

Designed to hold the switch box firmly in place in wallboard.

Illustration shows the switch box clip back of the wallboard, and held in place by bending over the prongs after which the screws are placed through the ends of the ears and the switch box is fastened through the

wall board into the clip.

Cadmium finish only.

Standard package, 1000.

Weight per 1000, 23 pounds.

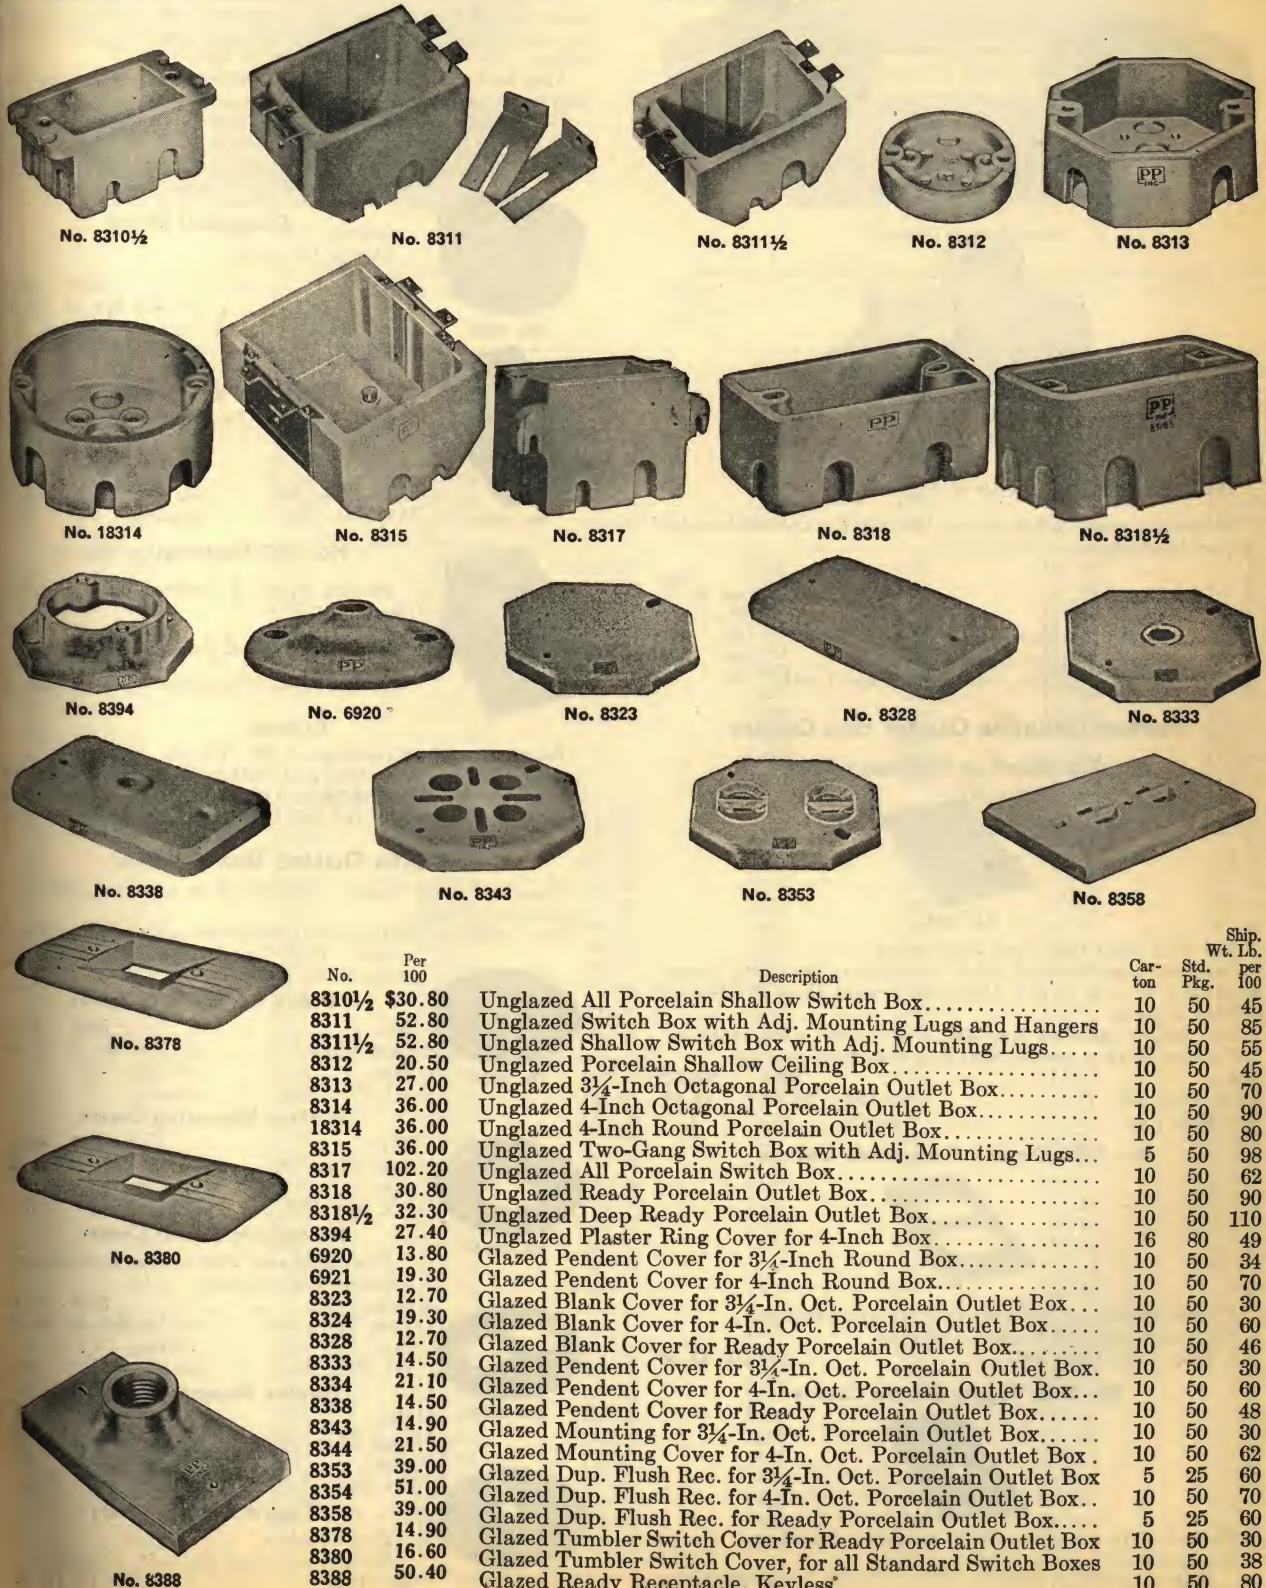

## All-Porcelain Outlet Boxes, Covers and Receptacles

Listed by Underwriters' Laboratories, Inc.

Designed to receive standard wiring devices. Standard tapped inserts, knockouts, and spacing.

Provide a completely insulated wiring system when used with standard concealed knob and tube wiring, open cleat wiring or non-metallic sheathed cable, eliminating all live metallic exposures.

Ease of installation and economy are effected through elimination of grounding, clamps, and connectors. Grounding is not required since the porcelain box is an insulator, and the Code permits dispensing with clamps and connectors when the approaching conductors are supported within 6 inches of the box.

\*Dimensions give length of body only, not including hubs.

†Not made in lengths longer than 36 inches.

### T&B Weatherproof Cast Iron Junction Boxes

Approved by Underwriters' Laboratories

For enduring, weatherproof service.

Cover has a deep recess in which square packing is secured.

Strong bronze hinges on one long side and an adequate number of big, easy turning bronze thumb nuts on the other three sides make a perfect watertight job when the cover is tightened.

Made of medium fine grain cast iron with hot dip galvanized finish.

### T&B Cast Iron Junction Boxes and Covers

Approved by Underwriters' Laboratories  
Flanged or Flush Type

Hot dip galvanized finish.

Drilling and tapping at extra cost.

## O.Z. Type Y6000 Heavy Duty Cast Iron Junction or Pull Boxes

Box A

Box B

Used for surface or flush mounting depending upon requirements.

Flange and cover are the same thickness as the box. Steel cap screws are furnished, and, where style A is called for, the cap screws are installed on close centers.

**Box A** is designed for explosion-resisting-proof work, and has a raised cover which is machined to a close tolerance. Has boss to provide 5 full threads.

**Box B** is watertight and is provided with a rubber gasket.

Drilling and tapping, mounting lugs, and bosses available at additional cost.

When ordering specify letter A or B after catalog number.

FA Floor Boxes

Types FB-5, FB-345 and FB-345-2

Type FB-5

Type FB-345-2

Particularly designed for installation in wood floors with concrete base, can also be installed in concrete or tile floors.

Adjustable type with 5-inch diameter, satin finish brass reversible cover.

**Type FB-5** is for telephone, signal and bell system outlets, also light and small capacity power outlets without receptacle. Cover has 1/2-inch pipe size tapped opening with brass plug and one-piece fiber bushing.

**Type FB-345** is for light or power service with small capacity receptacle (15-amp., 125-v., 2-pole, single flush receptacles with fastening screws on 2 3/8-inch centers and standard plug cap); also telephone, signal and bell service. Cover has 1 1/4-inch pipe size tapped opening with brass plug and split bushing.

**Type FB-345-2** is of same type and for same application as Type FB-345, except cover has 2-inch tapped opening with brass plug, but no bushing, and is particularly suitable for use with the following capacity.

15 amp., 125 v., 2 pole, Arrow 7960-7963, H&H 7960-7963, Hubbell 5566-6730.

15 amp., 125 v., 3 pole, Arrow 8147-SA, Bryant, 9116-9111, H&H 7310-7070, Hubbell 6051-6149.

20 amp., 250 v., 2 pole, Arrow 8245-JA, Bryant 556-652, H&H 7089-7303, Hubbell 5552-6720.

20 amp., 250 v., 3 pole, Arrow 8140-KA, Bryant 9326-9322, H&H 7316-7314, Hubbell 6810-7198.

Each unit is furnished with a hot galvanized finish No. 12 gage, 4 1/4-inch diameter, 3-inch deep pressed steel box, having two 1/2-inch and two 3/4-inch conduit knockouts in opposite sides and one 1/2-inch knockout in bottom; 1-inch conduit can be used by reaming these knockouts.

Cadmium plated drawn steel adjusting ring permits adjustment for 3/4-inch variation in setting of box. Extra depth rings for greater variation are available at an additional charge. Rubber gaskets make the box reasonably watertight.

Standard package, 24 of one type.

Shipping weight, 100 pounds.

All Types..... Each \$10.00

For special depth adjusting rings add \$1.50 for each additional inch.

FA Signal Floor Boxes

Cast iron box with brass cover.

Type 437-S complies with U.S. Treasury Department specifications for work under its jurisdiction.

Tapped conduit holes will be provided if template accompanies order.

No.....	437-D
Each.....	\$22.50
Inside Dimensions.....inches	5 1/2 x 5 1/2 x 4

FA Floor Boxes

Types FB-3W and FB-343R

Type FB-3W

Type FB-343R

For installation in concrete or tile floors.

Adjustable type with 3-inch diameter, satin finish brass reversible cover.

**Type FB-3W** is for telephone, signal and bell system outlets; also light and small capacity power outlets without receptacle. Cover has 1/2-inch pipe size tapped opening with brass plug and one-piece fiber bushing.

**Type FB-343R** is for light or power service with small capacity receptacle; also telephone, signal and bell systems. Special receptacles are furnished at extra charge. The following receptacle and plug combinations can also be used.

15 amp., 125 v., 2 pole, H&H 7176-1407, Hubbell 7331-7068, Arrow 8232-RA.

15 amp., 125 v., 3 pole polarized, Hubbell 7214-9975.

Each unit is furnished with a hot galvanized finish No. 12 gage, 4 1/4-inch diameter, 3-inch deep pressed steel box, having two 1/2-inch and two 3/4-inch conduit knockouts in opposite sides and one 1/2-inch knockout in bottom; 1-inch conduit can be used by reaming these knockouts.

Cadmium plated drawn steel adjusting ring permits adjustment for 3/4-inch variation in setting of box. Extra depth rings for greater variation are available at an additional charge. Rubber gaskets make the box reasonably watertight.

Standard package, 24 of one type.

Shipping weight, 100 pounds.

Both Types.....each \$6.00

Special depth adjusting rings, add \$1.50 for each additional inch.

Receptacles

10 Amp., 250 V., 2 Pole.....	each \$ .35
10 Amp., 250 V., 3 Pole, Polarized.....	each .60

FA Hand Hole Boxes

Cast iron box with checkered cover of same material and rubber gasket to exclude moisture.

Tapped conduit holes will be provided if template accompanies order.

No.....	2010	2011	2012
Each.....	\$55.00	70.00	115.00
Inside Dimensions.....inches	12x12x6	12x12x12	18x18x12

## R&S Heavy Duty Floor Receptacles and Plugs

\*Non-Adjustable

### 3-Wire—Round Type

†75 Amperes, 440 Volts  
†100 Amperes, 250 Volts  
Polarized

No. 155

Box is made of cast iron with corrosion resisting finish.

Floor plate, nozzle, and flush cap are made of brass.

Receptacle interior and plug base are made of molded composition with heavy, self-aligning machined contacts.

Outlets: maximum, 1½ inches. Specify size and location when ordering.

Standard package, \$100.00 list value. Accessories may be assorted with complete boxes to obtain standard package.

### T&B Rectangular Gang Floor Boxes

Adjustable and Watertight Boxes for Light,  
Power and Communications  
Approved by Underwriters' Laboratories

These boxes have a double mechanical adjustment: floor form adjustment by adjusting screw in ear at each corner of box; floor level adjustment by adjusting screws in cover frames. Covers have no unsightly screws. The cover is metallically grounded to the box. Boxes are heavily gasketed and are watertight.

Standard equipment of these boxes is a combination 1/2-inch and 2-inch cover plate with each gang. Receptacles, nozzles and other accessories extra. Adjustment: 5/8-inch vertical; 10° angular. Minimum height overall, 3 3/8 inches; width, 4 5/16 inches. Packed one to a carton.

## Parts

**No. 458 Cover Plate.**—For 1-section gang outlet for 1/2-inch convex plug. Approximate weight, 7 ounces. each \$3.00

**No. 459. Cover Plate.**—Same as No. 458, except for 2-inch flush plug. Approximate weight, 7 ounces. Each 3.00

**No. 471 Plug.**—A 1/2-inch convex plug for cover plate. Approximate weight, 1 ounce. each 1.00

**No. 472 Plug.**—A 2-inch flush plug for cover plate. Approximate weight, 2 ounces. each 1.20

**No. 472-S Plug.**—A 2-inch plug for cover with 1/2-inch convex plug in center. Approximate weight, 2 ounces. each 1.40

**No. 439 Plate.**—For seating 2-inch flush plug. Approximate weight, 1 ounce. each .40

**No. 464 Gasket.**—Rubber gasket for No. 458 or 459 cover plate. Approximate weight, 1/2 ounce. each .40

**No. 476 Sealing Cement.**—For 1-section gang. Approximate weight, 4 ounces. each .40

**No. 439-E Frame.**—Extension frame for mounting on No. 441 single gang floor outlet. Opening, 2 inches. Thickness, 1/16 inch. Height, 1/8 inch. Approximate weight, 3/4 pound. each 3.00

**No. 459-EC Collar.**—Threaded 2-inch male for inserting in any 2-inch opening and 2-inch female for inserting 2-inch flush plug. Gasket furnished in female end for use under 2-inch plug. Height, 7/8-inch. Approximate weight, 1/2 pound. each 2.50

**Round Type Low Tension Nozzles**

Diameter head,  $2\frac{1}{16}$  inches. Overall length,  $4\frac{3}{4}$  inches. Complete with two  $\frac{5}{8}$ -inch inside diameter fiber bushings, one on each side.

Approximate weight, 16 ounces.

No.....	417-B	417-C	*417-D
Each.....	\$3.80	4.50	7.50
Diameter Stem.....inches	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{1}{2}$

\*With receptacle on both sides.

**No. 465 Drip Nozzles**

For two outlets from same box. Threaded  $\frac{1}{2}$  inch for  $\frac{1}{2}$ -inch taps.

Approximate weight, 4 ounces.

No. 465.....each \$2.34

**No. 466 Bell Nozzles**

Diameter at bottom, 2 inches. For use with cover plates with 2-inch openings. Approximate weight, 3 ounces.

No. 466.....each \$1.60

**No. 467 Bronze Stem Nozzles**

Threaded  $\frac{1}{2}$  inch for  $\frac{1}{2}$ -inch taps. Diameter,  $\frac{1}{2}$  inch.

Approximate weight, 3 ounces.

No. 467.....each \$1.60

**Steel City Nozzles and Bases****For All Types of Floor Outlets****No. 468-B Cast Bronze Nozzles**

With two duplex receptacles, allowing four connections. Threaded  $\frac{1}{2}$  inch for  $\frac{1}{2}$ -inch taps. Can also be furnished with  $\frac{3}{4}$ -inch stem, specify when ordering. Available in horizontal or vertical type, specify when ordering.

Price does not include cover plate or base.

Approximate weight, 14 ounces.

No. 468-B.....each \$12.48

**Telephone Pull-Box Nozzles**No. 469 Nozzle,  
No. 461 BaseNo. 470 Nozzle,  
No. 461-A BaseNo. 474 Low Tension  
Nozzle No. 473-A Base

**No. 469.**—Threaded  $\frac{1}{2}$ -inch. Takes 5-pair braided cable  $\frac{3}{4}$ -inch high.

No. 469—Approximate Weight, 10 Ounces.....each \$5.92

**No. 470.**—Same as No. 469, except threaded  $\frac{3}{4}$ -inch. Takes from 5 to 20-pair braided cable.

No. 470—Approximate Weight, 14 Ounces.....each \$6.30

**No. 474.**—Low tension type nozzle threaded for attachment to any  $\frac{3}{4}$ -inch opening. Stem threaded 1 inch long for use with No. 473-A base. Height,  $3\frac{1}{4}$  inches.

No. 474—Approximate Weight, 14 Ounces.....each \$2.80

**Bronze Bases for Nozzles**

473	1.80	$\frac{1}{2}$	$\frac{1}{2}$	3
473-A	1.80	$\frac{3}{4}$	$\frac{3}{4}$	3

**No. 468 Cast Bronze Combination Nozzles**

With duplex threaded  $\frac{1}{2}$  inch for  $\frac{1}{2}$ -inch taps. Can also be furnished with  $\frac{3}{4}$ -inch stem, specify when ordering. Available in horizontal or vertical type, specify when ordering.

Approximate weight, 16 ounces.

No. 468.....each \$7.80

**No. 468-A Cast Bronze Nozzles**

With single receptacle. Threaded  $\frac{1}{2}$  inch for  $\frac{1}{2}$ -inch taps. Can also be furnished with  $\frac{3}{4}$ -inch stem, specify when ordering. Available in horizontal or vertical type, specify when ordering.

Approximate weight, 16 ounces.

No. 468-A.....each \$7.80

Prices of nozzles do not include cover plates or bases.

## Bull Dog Universal Type Trol-E-Duct Systems

### Portable Electricity

Universal Trol-E-Duct provides a flexible wiring system, in contrast to the old fixed outlet system.

Consists of standardized duct sections enclosing copper busbars into which can be inserted plugs and trolleys for feeding current to lights and small tools.

#### Duct Lengths

Rated capacity: 50 amperes, 250 volts. Available in ten lengths, measured from ends of busbars.

No.	Each	Lgth. In.	Std. Pkg. No.	Wt. Lb.	No.	Each	Lgth. In.	Std. Pkg. No.	Wt. Lb.
D701	\$3.00	1	10	5	D706	\$7.00	6	10	37

EFB711	6.00	End Feed	4	10

#### No. WS710B Weight Support

When inserted in the duct, it supports loads such as lighting fixtures, transformers, etc., up to 75 pounds. It locks in place by turning 90° in duct, bringing prongs of clamp down into duct grooves and then tightening lock nut against the outside of duct.

Standard package, 50.

Weight per standard package, 4 1/2 pounds.

No. WS710B.....each \$ .30

No. RTG712 Trolley

## Dimensional Data For Installing Bull Dog Universal Trol-E-Duct

7/8", 1 1/8", 1 3/8", 1 3/4" K.O.'S FOR 1/2", 3/4", 1", 1 1/4" CONDUIT  
8 CONCENTRIC K.O.'S—3 ON EACH SIDE—1 ON EACH END.

7/8", 1 1/8", 1 3/8", 1 3/4" K.O.S FOR 1/2", 3/4", 1", 1 1/4" CONDUIT.  
6 CONCENTRIC K.O.S—3 ON EACH SIDE.

Each USC710 coupling adds 1/4" to the length of the duct run. C710, TC710, and UC710 couplings do not add to the length of the duct run.

Each EFB711 adds 5 3/4" and each FCB711 or SFB711 adds 4 1/4" to the length of the duct run. FCB711, SFB711, FCB710, SFB710, and EFB711 are all 4 1/8" wide.

PEP230C is used for connecting flexible cord to end of duct. Maximum cord diameter—.406".

PEP250 is used for connecting steel armored cable, flexible metallic conduit (limited to 1/2" size) and flexible cords to end of duct.

Bull Dog Industrial Type Trol-E-Duct Systems

Bull Dog Industrial Trol-E-Duct is a mobile electrical system providing a constant source of electrical power for cranes, hoists, portable electric tools, and other moving loads. Carries current through copper bus bars enclosed in insulated steel duct. Current is collected by trolleys to which are wired portable or movable electrical devices. Flexibility, unit construction, and standardized design permits Trol-E-Duct to be installed, dismantled, and reinstalled innumerable times to meet the ever-changing nature of modern industry.

Drop-Out Section

No. TRD310-44, 3-Pole Standard 10-Foot Duct Section

One hanger assembly, complete with hanger, cover and set of bus connectors, is furnished as standard equipment with each duct section, drop-out, and drop-out sectionalizing section.

Standard 10-Foot, 90-Ampere Duct Sections  
575 Volts or Less

## Bull Dog Flexible BUStrIBUTIONDUCT Systems

### Ventilated O-X Duct for Feeder Circuits

Ventilated LO-X BUStrIBUTIONDUCT is designed for efficient power and lighting feeder runs; also welders or other large inductive loads.

Materially reduces voltage drop, operating temperatures, and operating costs.

Available in capacities ranging from 600 to 4000 amperes inclusive, for 2-pole, 3-pole, or 3-phase 4-pole, 600 volts or less, a.c. or d.c.

**Duct Section**

**Flatwise Elbow**

**Edgewise Elbow**

**Duct Section.** In addition to standard 10-foot duct sections (as illustrated) fittings are available to meet any building contour or installation requirements.

**Flatwise Elbow.** Flatwise elbows are available for making right or left hand 90° bends. Scarf lap joints and bolted connections are used for joining elbows to duct sections.

**Edgewise Elbows.** Edgewise elbows permit 90° right or left hand bends. Handhole openings afford access to bus bars within casing and facilitate connecting of fittings to duct.

**Bull Dog Flexible BUStrIBUTIONDUCT Systems****Type BDA Plug-In Duct for Branch Circuits****Type BDA Duct****Bus Plug for Type BDA Duct  
Cover Operable Type**

Type BDA plug-in duct (200 amperes maximum) has been specially designed for use in factories, garages, repair shops, and similar places where the total connected load is small and individual motor circuits do not exceed 100 amperes.

Furnished for 2 and 3-pole service, 600 volts or less.

Each 10-foot section is equipped with 10 plug-in openings, 5 on each side of duct.

**Type BD Plug-In Duct for Branch Circuits**

Type BD plug-in duct has ten provisions for insertion of branch circuit plugs in each standard 10-foot section, 5 on each side of duct.

It is prefabricated and can be quickly and easily installed, rearranged, relocated or moved into another building without any material loss.

Furnished in capacities from 225 to 1350 amperes for 2 or 3-pole service, 600 volts or less, a.c. or d.c. Also available for 3-phase, 4-pole, 250 volts or less.

## Bull Dog Flexible BUStribution DUCT Systems

## Type BD Plug-In Duct for Branch Circuits

## Vacu-Break Switch Plugs

## 2-Pole—230-Volt, A.C.—250-Volt, D.C.

Circuit Master Plug

Used for the individual control of lighting circuits and wall receptacles, thus eliminating the distribution network of the centralized panel-board lighting system.

Ratings from 15 to 50 amperes, 120 and 208 volts.

Circuit Breaker Plug

Used where an automatic protective device of the industrial breaker type with inverse time limit feature is required.

Plugs are quick-make and quick-break with cover interlock.

Ratings from 15 to 600 amperes, 2, 3, and 4-poles, 600 volts or less.

Transformer Plug

Rated at 2, 4, 6, 8, and 10 kva. Furnish single-phase kva. Furnish single-phase current at reduced voltage (240V. or 120V.).

Designed with or without 2-pole a.c. magnetic contactors. May be plugged in on 240V. or 280V., 2-pole or 2-pole Type BD duct. Contactors are rated at 22 and 45 amperes.

Temperature Indicating Plug

Warns, by visual indication through a lamp, when temperatures along a bus duct run exceed an efficient operating temperature—100°C. (221°F.) and thus remedial measures can be taken to relieve the situation.

Vacu-Break Type BOS Switch Plug

Fusible and non-fusible types are available from 30 to 600 amperes, 2 or 3-pole 600 volts or less, or 4-pole solid neutral, 230 volts, a.c.

Minimizes arcing, also prevents pitting and beading of contacts.

Plugs are quick-make, quick-break and horsepower rated.

Type BP Bus Plug

Fusible and non-fusible plugs for disconnecting service only.

Ratings are for 30, 60, and 100 amperes, 2 or 3-pole 600 volts or less, or 4-pole, solid neutral, 230 volts a.c.

Opening and closing the hinged cover makes or breaks the circuit.

Plugs are horsepower rated.

Capacitor Plug

A convenient and flexible means for reducing inductive heating and improving the power factor on bus duct systems.

The thermal protective device and capacitor unit are contained in one housing.

Rated from 1 to 7.5 kva. at 230 volts and 1 to 15 kva. at 460 volts, 60 cycle a.c.

Ground Detector Plug

Affords an easy means, through lamps, for quickly indicating grounds on the system. Also serves as potentializer by establishing a potential to ground between bus bars and casing.

Ratings, single-phase and 3-phase, 460 and 230 volts.

**Bull Dog Kbl-Duct and Fittings**

4x4-Inch Wiring Trough

Cross Sectional Area 16 Inches

Approved for use under Wireways—Article 362 of the National Electrical Code.

Kbl-Duct is an enclosed metal raceway, or trough, for conveying electric wires and cables, and designed to provide ample protection against damage to the wires or cables. It affords instant accessibility at all points throughout its length,

permitting splicing, tapping, or other changes, or allowing other cables to be run through quickly and easily. Its use makes possible the convenience of temporary wiring with the efficiency of a permanent installation.

Kbl-Duct is manufactured in standardized sections, provided with hinged covers and numerous conduit knockouts. The sections are designed to be bolted together, the completed assembly forming a continuous, unbroken wireway. Its variety of fittings (tees, elbows, pull boxes, etc.) makes it adaptable to any building contour. Offsets or change of direction are readily effected. Kbl-Duct may be suspended from an overhead mounting, or supported on a wall. Single runs, multiple runs, branch runs or any combinations of these are possible.

All items of the Kbl-Duct line are die made from heavy steel, and are uniform in size. All have a durable, baked black enamel finish.

**Maximum Number of Wires (Types R, RH, and RW)  
Which May Be Installed in 4x4-Inch Kbl-Duct**

The table below shows the maximum number of wires or cables, Types R, RH, and RW, all of one size or in combination, which may be installed in 4x4-inch, Kbl-Duct, under the 20 per cent of area limitation provided in Article 362, paragraph 3624, of the 1947 National Electrical Code. It should be noted particularly that the Code states: "Wireways shall not contain more than 30 conductors at any cross section, unless the conductors are for signaling circuits or are control conductors between a motor and its starter and used only for starting duty."

**All One Size**

Wire Size No.	Area of Rubber Covered Wire Types R, RH, & RW Square Inches	Maximum Number of Wires All of One Size	Wire Size No.	Area of Rubber Covered Wire Types R, RH, & RW Square Inches	Maximum Number of Wires All of One Size
14	*.0230	†139	1/0	.3107	10
12	*.0278	†115	2/0	.3578	8
10	.0460	† 69	3/0	.4151	7
8	.0760	† 42	4/0	.4840	6
6	.1238	25	250M	.5917	5
4	.1605	19	300M	.6837	4
3	.1817	17	400M	.8365	3
2	.2067	15	500M	.9834	3
1	.2715	11			

No. 14 to 8, solid wire; No. 6 and larger, stranded.

\*Areas in square inches for Type RW in Nos. 14 and 12 are .0327 and .0384.

†Maximum number of conductors limited to 30, except as noted in paragraph above.

**Combinations of Sizes**

Combinations of various sizes may be computed in the following manner:

EXAMPLE: It is desired to install three 250,000CM cables in 4x4-inch Kbl-Duct, using the remaining capacity of the wireway for No. 8 wires. How many No. 8 wires may be installed?

Area of 4x4-inch Kbl-Duct=16 square inches.

Area of 20 per cent of wireway=16÷5=3.2 square inches.

Space reserved for three 250,000CM cables=3x.5917=1.7751 square inches.

Space remaining for No. 8 wires=3.2-1.7751=1.4249 square inches.

Space required for one No. 8 wire=.076 square inches.

Number of No. 8 wires permissible=1.4249÷.076=18.

Thus, 18 No. 8 wires may be installed in combination with three 250,000CM cables.

**Bull Dog Kbl-Duct and Fittings**

Listed as "Wireways" by Underwriters' Laboratories

4x4-Inch Kbl-Duct

Kbl-Duct has adaptable features whereby it can be connected to any type 4x4-inch duct. With No. 40A35 it can be connected to existing installations of 3½x3½-inch

duct. Duct may be mounted with cover at top, sides, or bottom.

Two types of concentric knockouts are provided, spaced at convenient intervals along the duct sections and fittings. The smaller type accommodates ½ and ¾-inch conduit; the larger, ¾, 1, 1¼, and 1½-inch conduit.

No.	40D5	40D2	40D1
Each.....	\$8.00	5.00	4.00
Length.....feet	5	2	1
Weight.....pounds	18	8	5

**Nipples**

A short length of duct which may be inserted between the standard lengths so as to secure any dimensional length of duct required.

No.	Each	Length Feet	Weight Pounds
40N6	\$4.00	6	2¼
40N3	3.00	3	1½
40N2	3.00	2	1¼
40N07	1.50	¾	1¼
40N05	1.50	½	1
40N01	.60	¼	¼

**No. 40SN Slide Nipples**

A convenient adjustable fitting for taking up the slack where there are variations in lengths of runs. After length is established, both sliding sections should be bonded together for grounding; screws are provided.

Minimum length, 8 inches; maximum extension, 13 inches. Weight, 5 pounds.

No. 40SN.....each \$4.50

**No. 40F End Flanges**

This fitting is the regular reinforced flange end of the Kbl-Duct and is supplied separately for welding or bolting onto a section of duct where it may have been necessary to cut a standard section.

Weight, ¼ pound.

No. 40F.....each \$.80

**No. 40EP End Plates**

This end plate, provided with K.O., is used for closing the end of a duct section or opening in a pull box.

Weight, ¼ pound.

No. 40EP.....each \$.80

**No. 40H7 Hangers**

For suspending Kbl-Duct. Where necessary, hanger can be bent at right angles in a vise, as shown at right. Any number of these hangers may be bolted together to secure any length hanger desired in ½ inch multiple adjustments.

Length, 7 inches. Weight, 1½ pounds.

No. 40H7.....each \$.60

### Bull Dog Kbl-Duct Fittings

Listed as "Wireways" by Underwriters' Laboratories

#### 22½°, 45°, and 90° Elbows

This elbow is provided with flanges, so it can be bolted on the end of a Kbl-Duct section. It is made with special dies and formed circular and smooth, so that wires may be readily pulled through it.

No. ....	40L22	40L45	40L90
Each .....	\$5.00	5.00	5.50
Shape .....	22½°	45°	90°
Weight .....	1½	2½	4

#### No. 40CL9 90° Corner Elbows and Pull Boxes

A combination pull box and elbow, provided with hinged cover and spring catch. K.O.'s are provided for convenient conduit outlets.

Weight, 5½ pounds.

No. 40CL9.....each \$9.00

#### No. 40T Tees

This tee has hinged cover provided with catch. K.O.'s are provided. This fitting recommended for use at every building column or point where light and power cabinets are, or may be later, located.

Weight, 7¼ pounds.

No. 40T.....each \$11.00

#### No. 40X Crosses

This cross is provided with double hinged doors, so it may be used as a pull box, greatly increasing the flexibility of the duct system.

Weight, 9¼ pounds.

No. 40X.....each \$13.50

#### No. 40B40 4-Inch Square Junction Boxes

This junction box may sometimes be used in place of the more expensive tees and ells. It has removable sides provided with K.O.'s, so that junction with sections of Kbl-Duct or conduit can be readily effected.

Weight, 1¾ pounds.

No. 40B40.....each \$3.00

#### No. 40B7 7½-Inch Square Junction and Pull Boxes

This 7½-inch square, combined junction and pull box is designed for use where space limitations or requirements preclude the use of the larger pull box. Closing plates for unused openings (No. 40EP) are extra. Kbl-Duct bushings (No. 40DB) should be ordered and inserted in the used openings.

Weight, 4 pounds.

No. 40B7.....each \$7.00

### Bull Dog Kbl-Duct Fittings

Listed as "Wireways" by Underwriters' Laboratories

#### No. 40B12 12½-Inch Square Pull Boxes

This 12½-inch square box provides a more ample pull box and may also be used as a junction box for double runs of Kbl-Duct. Closing plates for unused openings (No. 40EP) are extra. Kbl-Duct bushings (No. 40DB) should be ordered for insertion in the used openings.

Weight, 9½ pounds.

No. 40B12.....each \$18.00

#### No. 40DB Pull Box Bushings

Kbl-Duct bushing has a round edge bead to protect and facilitate the work of pulling through the wires; should be ordered for insertion in the used openings of the pull boxes.

Weight, ¼ pound.

No. 40DB.....each \$.50

#### No. 40DC Branch-Off Couplings

This branch-off coupling (of which two views are shown) may be used as a convenient or emergency tee to start a branch run of Kbl-Duct from any point of an existing installation. All that is necessary is to knock out the K.O.'s in the duct, or if a larger opening is desired, cut out a section of the duct, bolt this fitting onto the duct, and continue with the branch run in the direction desired.

Weight, 3 pounds.

No. 40DC.....each \$4.50

#### No. 40A35 Adapters

The adapter is for use in connecting new runs of 4x4-inch Kbl-Duct to existing installations of 3½x3½-inch duct.

Weight, 2½ pounds.

No. 40A35.....each \$3.00

#### Conduit Couplings

A casting provided with threads for conduit and flange for bolting on the Kbl-Duct or fittings.

No. ....	40C25	40C30	40C35
Each .....	\$4.00	4.00	4.00
Duct Conduit.....inches	4 to 2½	4 to 3	4 to 3½
Weight.....pounds	1¾	1¾	1¾

## Nipples

For use where shorter connection, than is afforded by 1-foot lengths or the telescope fittings, is required.

No.	Each	Lgth. In.	Size In.

20606	8.50	6	6x6

## Universal Drop Hangers

For suspending wiring trough from overhead. Provided with screws and nuts for mounting.

No.	Each	Size In.
20217	\$ .50	2 1/2 x 2 1/2
20417	.60	4x4
20617	3.00	6x6

## Universal Bracket Hangers

For mounting wiring trough on side wall.

No.	Each	Size In.
20227	\$ .50	2 1/2 x 2 1/2
20427	.60	4x4
20627	3.00	6x6

## Reducing Fittings

No.	Each	For Joining Duct, In.
20422	\$2.30	4x4 to 2 1/2 x 2 1/2
20622	5.00	6x6 to 4x4

## Junction Boxes

To form T, L or cross. Price includes two closing plates. Cover is removable.

No.	Each	Size In.
20248	\$2.50	2 1/2 x 2 1/2
20448	3.00	4x4
20648	11.00	6x6

## Closing Plates

For closing end of section or any side of junction box.

No.	Each	Size In.
20216	\$ .60	2 1/2 x 2 1/2
20559	.80	4x4
20659	3.00	6x6

## Square D Duct and Fittings

### Schedule A Duct

The trough is flanged at both ends so that two sections can be clamped together. Cover is hinged. Knockouts are provided in sides and back for 1/2 and 3/4-inch conduit in 2 1/2 x 2 1/2-inch duct, and 1/2, 3/4, 1 and 1 1/4-inch conduit in 4x4 and 6x6-inch duct.

No.	Each	Size Inches	Length Feet
20241	\$2.50	2 1/2 x 2 1/2	1
20242	3.00	2 1/2 x 2 1/2	2
20243	5.00	2 1/2 x 2 1/2	5
20441	4.00	4x4	1
20442	5.00	4x4	2
20443	8.00	4x4	5
20641	12.00	6x6	1
20642	16.00	6x6	2
20643	26.00	6x6	5

## Trough Collars

Used when necessary to cut standard duct.

No.	Each	Size In.
20240	\$ .60	2 1/2 x 2 1/2
20440	.80	4x4
20640	3.00	6x6

## Panel Fitting Collars

For connecting duct to panels. By cutting hole size of duct in panel box and clamping box wall between panel fitting collar and duct collar, a solid connection is made free from rough edges.

No.	Each	Size Inches
20221	\$ .60	2 1/2 x 2 1/2
20421	1.30	4x4
20621	3.00	6x6

## Telescope Fittings

Slide arrangement for making connection to duct fittings at varying distances.

No.	Each	Size Inches	Extends Inches
20244	\$3.00	2 1/2 x 2 1/2	7 1/2 to 12
20444	4.50	4x4	8 to 12
20644	36.00	6x6	8 to 12

## Elbows

### 7 1/2° Elbows

No.	Each	Size Inches
20207	\$2.00	2 1/2 x 2 1/2
20407	2.50	4x4
20607	9.00	6x6

### 22 1/2° Elbows

No.	Each	Size Inches
20255	\$3.00	2 1/2 x 2 1/2
20455	5.00	4x4
20655	16.00	6x6

### 45° Elbows

No.	Each	Size Inches
20245	\$3.00	2 1/2 x 2 1/2
20445	5.00	4x4
20645	16.00	6x6

## Box Fittings

For connecting duct to panels, pull boxes, etc. One end fits round hole duct collar.

No.	Each	Size Inches
20249	\$5.00	2 1/2 x 2 1/2
20449	5.00	4x4
*20467	5.00	4x4
*20649	36.00	6x6
*20667	36.00	6x6

\*For square hole in box or panel cabinet.

## Pull Boxes

Price includes two sides with double openings and two with single openings; does not include closing plates for unused openings.

No.	Each	Description	Size In.
20558	\$18.00	Pull Box.....	4x4
20658	63.00	Pull Box.....	6x6
20559	.80	(Closing Plate)....	4x4
20659	3.00	(Closing Plate)....	6x6
20561	3.00	(Box Side, 1 Opening)	4x4
20661	12.00	(Box Side, 1 Opening)	6x6
20562	4.00	(Box Side, 2 Opening)	4x4
20662	15.00	(Box Side, 2 Opening)	6x6

## T Fittings and Pull Boxes

No.	Each	Size In.
20471	\$11.00	4x4
20671	36.00	6x6

## 90° Elbows and Pull Boxes

No.	Each	Size In.
20472	\$9.00	4x4
*20490	5.50	4x4
20672	28.00	6x6

\*Without hinged cover; other numbers have hinged cover as illustrated.

## T Fittings

For T connection. Cut hole inside of duct and drill holes to match holes in flange on narrow end of fitting.

No.	Each	Size In.
20247	\$3.00	2 1/2 x 2 1/2
20447	4.50	4x4
20647	16.00	6x6

Prices on Square D Duct without knockouts will be furnished on request.  
Prices on cadmium plating and other special weatherproofing finishes on Square D Duct and Fittings furnished on application.

## Typical Square-Duct Installations

Fig. 1

Fig. 1 is a down-view showing how the use of 4 vertical elbows makes it possible to cross over or to bridge another section of wiring trough. The use of 2 of these fittings makes it possible to drop to a lower level whenever desirable. In this view, the wiring trough sections are mounted to the side wall by means of bracket hangers.

Fig. 2 illustrates the use of the telescope fitting, the drop hanger, the junction box and connecting a wiring trough section to the power panel.

By looking carefully at the bottom of the telescope fitting, you will notice a cutaway view showing how the use of the panel fitting collar provides a smooth surface over which wires can be drawn without trouble.

Fig. 2

Fig. 3

Fig. 3 illustrates the use of elbows, telescope fitting and mounting brackets, in coming up out of a panel to a section of wiring trough suspended from the ceiling.

Using one of the many knockouts in the wiring trough to make a connection to a switch.

Fig. 4

Fig. 5

Illustration shows how a bracket hanger is used to mount a section of trough to the sidewall.

Fig. 6 shows the use of the T fitting in a section of trough. The use of this fitting permits the connection to another section of trough running at right angles, to a junction box, or to make a right angle connection when the joints are not conveniently located.

Fig. 6

Fig. 7

Illustration shows the use of two 45° elbows, passing a column located in a corner.

Fig. 8

Fig. 8 shows one method of using Square Duct trough to connect power panels in one common gutter. It also illustrates the use of the junction box as a cross fitting.

## Trumbull FVK Flex-A-Power Enclosed Bus Bar Distribution Systems

Types FD, FL and FCE Flex-A-Plugs Assembled on 10-Foot Length of Type FVK Flex-A-Power

Flex-A-Power, commonly known as the convenience outlet for power in industry, is provided with outlets located on both sides of the bus bar steel housing for the plugging in of Flex-A-Plugs at any desired point at 12-inch intervals, making direct connection to motor-driven machines which may be moved or relocated as required.

Standard length, 10 feet; other lengths can be furnished on request.

Amp.	Phase	BAR SIZE, INCHES Neutral	2-Pole		3-Pole		3-Phase, 4-Wire

## Cable Tap Boxes

## Joint and End-Of-Run Types

Price of cable tap boxes includes necessary bus and lugs only. Tap boxes are made standard for assembly between two standard lengths or at end of run. If tap boxes are required for assembly in special locations, an additional charge will be made.

When ordering, give number and size of proposed cables.

## Type FS and FD R &amp; S Conduit Boxes

Type FS, Four-Gang

For surface mounting.

Maximum conduit, 1 inch.

Accommodates all Russell & Stoll Type FS and FD fittings.

Single-gang, 4-way; multi-gang, one outlet on one side, one per gang on opposite side and one on each end. Specify size and location when ordering.

Finish: cast iron, corrosion resisting finish; cast brass, bright dip.

Single-Gang

Tandem

## Single-Gang

Type	Cast Iron		Cast Brass		*Overall Dimensions Inches
	No.	Each	No.	Each	
FS	3701	\$1.25	3721	\$3.60	4 1/8 x 2 5/8 x 2 1/4

<b>2-Gang Tandem</b>					
FS	3715	\$2.50	3735	\$7.20	8 1/2 x 2 5/8 x 2 1/4

Adapter plates are available for flush mounting.

\*Dimensions are overall exclusive of conduit pads and mounting lugs.

## Type DSFD—Single-Gang

For surface mounting.

Will accommodate same devices as Type FS and FD boxes.

Can be tapped for two 1/2-inch or one 1 1/2-inch outlet maximum at each end.

Dimensions: 4 1/8 x 3 3/8 x 4 1/8 inches deep.

Adapter plates are available for flush mounting.

No. 3781, Cast Iron, Corrosion Resisting Finish. each \$2.50

No. 3782, Cast Brass, Bright Dip. each 7.20

No additional charge for drilling outlets when boxes are ordered as part of the complete devices. When ordering boxes only, there is an additional charge for drilling; 1/2 or 3/4-inch conduit size, 10 cents; 1-inch, 20 cents; 1 1/4-inch, 40 cents; 1 1/2-inch, 50 cents each. Specify size and location when ordering.

## \*Standard Dome Reflector and Holder

No. REA-21

For Nos. REA-1 and REA-2. Watts, 100. Packed 1 to a carton; weight, 4 lb.

\*When reflector is used, reflector holder clamps onto Types RVA and ROB lighting fixtures and guard cannot be used.

## Type FEH Flange Type Entrance Fittings.

No.

REA-25. Without DuxSeal Compound. . . . . 20

REA-26. With DuxSeal Compound. . . . . 21

Combination entrance cap and flange for out building service entrances in accordance with REA specifications. Made of aluminum and cannot rust. Insulator has four holes, two of which are plugged. Hub in back is tapped for ½-inch conduit. Furnished with hot galvanized wood screws.

Standard package, 24; carton, 1.

Description Wt. Lb. Std. Pkg.

**Crouse-Hinds Condulets**

**Discount Schedule.** Unless otherwise specified, Condulets carry Crouse-Hinds CR Schedule of terms and discounts.

**Material.** Unless otherwise indicated, all Condulets are made of Feraloy, a special Crouse-Hinds alloy. Feraloy is a special alloy having the desirable characteristics of both cast steel and gray iron, and possesses high tensile strength and unusual resistance to corrosion.

**Finish.** Unless otherwise indicated, the standard finish is cadmium-galvanized.

Available in a wide range of sizes for every need and purpose.

**Obround Series Condulets**

Form 7

Obround Condulets of the same size take the same covers and wiring devices.

2	L67	2.40	L697	3.50	L67-MT	3.50

## Type LBD

For use when it is necessary to make a 90° bend in the conduit system. Condulet is split, permitting a straight pull on the wires. Furnished with blank cast Feraloy cover.

Size In.	No.		Size In.	No.	
	No.	Each		No.	Each
1/2	LBD1100	\$ .65	3	LBD8800	\$14.25

## Obround Series Condulets

Obround Condulets of the same size take the same covers and wiring devices.

The size of the cover or wiring device for a Type X Condulet is the same as the size of the hubs at the ends of the cover opening.

Sizes of hubs are indicated by sequence of letters.

Size Inches				Threaded		Threadless		
A	B	C	D	No.	Each	No.	Each

## Covers for Obround Series Condulets

## Sheet Steel Covers with Cord Clamps

Provided with cord clamp and bushed hole which safeguards the drop cord. Takes cord  $\frac{1}{4}$  to  $\frac{3}{8}$ -inch diameter.

Size In.	No.	Each
$\frac{1}{2}$	1972	\$ .30
$\frac{3}{4}$	2972	.35

## Porcelain Covers

For Drop Cords and Fixture Pull Switches

With 1-wire hole and  $\frac{1}{8}$ -inch male nipple.

Size In.	Diam. Hole In.	No.	Each
$\frac{1}{2}$	$\frac{13}{32}$	1782	\$ .35
$\frac{3}{4}$	$\frac{13}{32}$	2782	.40

## For Weatherproof Sockets—2-Wire

Size In.	Diam. Hole In.	No.	Each
$\frac{1}{2}$	$\frac{5}{16}$	1781	\$ .16
$\frac{3}{4}$	$\frac{5}{16}$	2781	.25

## Aluminum Covers

Takes P&S-Despard, Bryant IL, Hubbell, Arrow-H&H TS and G-E TS wiring devices. Mounting bridge required to install wiring device; furnished with each cover listed below.

Without Guard			
Size In.	No.	Each	
$\frac{1}{2}$	1755	\$ .20	
$\frac{3}{4}$	2755	.30	

With Guard			
Size In.	No.	Each	
$\frac{1}{2}$	1785	\$ .20	

For switches only.

## Vaportight Switch Covers

With gasket and mounting strap for switches. Takes P&S-Despard, Bryant IL and Hubbell tumbler switches.

Size In.	No.	Each
$\frac{1}{2}$	1766	\$1.40
$\frac{3}{4}$	2766	1.50
1	3766	1.60

## Wiring Devices for Obround Series Condulets

## 2-Pole Attachment Plug Receptacles

		15 Amperes, 125 Volts or 10 Amperes, 250 Volts Single, with Double T Slots						
<b>Composition</b>		Size In.	Composition			Porcelain

## Types FS and FD Multiple Gang Condulets

## Without Hubs

Type FS, Five-Gang

With Push Button and Tumbler Switch Covers, and Threaded Cap and Spring Door Housings

Type FS, Two-Gang Tandem

Type FS, Three-Gang

Can be furnished with welded conduit hubs complete with integral bushings or can be drilled on the job and used with locknut and bushing.

Takes all individual covers to make up combination of several devices in one Condulet.

When ordering with welded hubs, specify type (threaded, union, threadless thin wall or threadless thick wall), size, and location of each hub. Furnish description or sketch of hub layout desired.

Number of Gangs	Type FS		Type FD

**Vaportight Covers**

For Condulets of the FS and FD Series, and

FS Series 2-Gang Tandem

With Switch Operating Mechanism

Surface or Flush. Furnished with gasket.

\*For External Operation of Double Push Button  
Switches

Furnished with Handle

No. DS108, Cast Feraloy.....each \$1.75

\*For Momentary Contact Switches  
Furnished with Handle

No. DS107, Cast Feraloy.....each \$1.75

\*For External Operation of Tumbler Switches  
For Standard Operation, On or Off

No. DS128, Cast Feraloy.....each \$1.75

For Momentary Contact Operation, Normally On

No. DS126, Cast Feraloy.....each \$1.75

For Momentary Contact Operation, Normally Off

No. DS127, Cast Feraloy.....each \$1.75

\*Where the temperature exceeds 125°F., switches furnished  
with heat-resisting buttons should be used.

### Vaportight Covers

For Condulets of the FS and FD Series, and  
FS Series 2-Gang Tandem  
With Switch Operating Mechanism

Surface or flush. Furnished with gasket.

**\*For Standard Tumbler Switches**  
For Standard Operation On or Off

No. DS181, Cast Feraloy.....each **\$1.75**  
For Momentary Contact Switches

No. DS183, Cast Feraloy.....each **\$1.75**

**For External Operation of Tumbler Switches**  
For Standard Operation On or Off

No. DS101

No. DS102

No. DS103

Furnished with switch operating mechanism but without switches. Surface or flush. Furnished with gasket and switch mounting plates.

No.	Each	No. of Switches	Material
DS101	<b>\$1.75</b>	1	Cast Feraloy

## Type BRD Plug Receptacle Housings

For Condulets of the FS and FD Series, and

**FS Series 2-Gang Tandem**

**Take Type BP Plugs**

\*30 Amperes, 250 Volts, A.C.

Can be used on Condulets mounted either on the surface or flush with the wall.

Two-pole housings are furnished with 30-ampere, 250-volt receptacle No. BR302; 3-pole housings are furnished with 30-ampere, 250-volt receptacle No. BR303; and 4-pole housings are furnished with 30-ampere, 250-volt receptacle No. BR304.

**With Spring Door**

No.	Each	Material
2-Pole BRD6302	\$4.20	Feraloy
3-Pole BRD6303	\$4.90	Feraloy
4-Pole BRD6304	\$5.60	Feraloy

**Without Spring Door**

No.	Each	Material
2-Pole BRD302	\$2.60	Feraloy
3-Pole BRD303	\$3.10	Feraloy
4-Pole BRD304	\$3.60	Feraloy

**With Threaded Cap**

Furnished with gaskets.

No.	Each	Material
2-Pole BRD8302	\$3.75	Feraloy
3-Pole BRD8303	\$4.70	Feraloy
4-Pole BRD8304	\$5.65	Feraloy

**Without Threaded Cap**

3-Pole BRD7303	\$3.35	Feraloy
4-Pole BRD7304	\$3.90	Feraloy

\*Can be used on 25-ampere, 125-volt d.c. circuits; or on 30-ampere, 250-volt d.c. circuits if circuit is broken before plug is withdrawn.

## FS Series 2-Gang Shallow Type Condulets

**Type FS**

**Type FSE**

**Type FSC**

Take covers and shallow flush rectangular wiring devices. Overall dimensions of body, exclusive of hubs: length, 4 1/2 inches; width, 4 5/8 inches; depth, 1 7/8 inches.

For wiring devices exceeding 1 5/8 inches in depth under the fastening ears, use Condulets of the FD series, 2-gang.

Condulets listed can be furnished with flat face (4 1/2 x 4 5/8 x 2 1/8 inches) to take standard wall plates at the same list prices; add suffix S24 to number.

**Type FS**

## Type ARB Vaportight Industrial Lighting Fixtures

## For SK Series Condulets, or 3/4 or 4-Inch Outlet Boxes

## Screw Guard Type

Form 100 is furnished with No. V75 globe and No. V911 guard, and takes 50, 60, 75 or 100-watt lamps.

Form 200 is furnished with No. V200 globe and No. V912 guard, and takes 150 or 200-watt lamps.

Form	With Globe and Guard		Without Globe and Guard	
	No.	Each	No.	Each
100	ARB31	\$4.10	ARB32	\$1.50
200	ARB33	4.75	ARB34	1.70

Forms 100 and 200 indicate sizes of vaportight fixtures. Accessories and parts are correspondingly classified.

If specified, lamp receptacle with lamp grip will be furnished at an advance of 10 cents in list price.

If specified, pigtail receptacle will be furnished at an advance of 45 cents in list price.

## GRF Series Condulets

Body Only With Lugs

GRF Series Condulets take flush or surface covers, vaportight lighting fixtures, fixture hangers and receptacles with housings.

Body Only Without Lugs

Type VDB Vaportight Industrial Lighting  
Fixtures with Reflectors

Type VDB is a cast aluminum fixture of the vaportight type, designed to meet the need for a simple, effective, and inexpensive vaportight industrial lighting fixture.

Made so that dust or vapor cannot enter the conduit system even if the globe is removed or broken. The opening into the conduit system is entirely closed by the lamp receptacle.

Furnished with a clear, plain pear-shaped globe, and a porcelain enameled reflector. The reflector is held to the body by four screws.

## Form 3

Furnished with No. VDB3 globe, reflector, and medium base lamp receptacle.

## With Shallow Bowl Reflectors

Each	\$1.50	1.80	2.10	2.50
For Size Reflector.....inches	12	14	16	18

†Center line of Condulet must be located 4 5/8 inches from the wall for mounting angle reflector.

†Center line of Condulet must be located 4 7/8 inches from the wall for mounting angle reflector.

Reflectors are green porcelain enamel outside and white porcelain enamel inside.

## Type VXHA Vaportight Industrial Lighting Condulets

### Clamp Guard Type and Screw Guard Type

Has five hubs flush with the surface of the body. The hubs have integral bushings. Four of the hubs are spaced 90° apart around the side of the Condulet, while the fifth hub is placed in the center of the top of the Condulet. Condulet is furnished with four flush type threaded pipe plugs.

Furnished with V75 globe, and takes 50, 60, 75, or 100-watt lamps. Clamp guard type has V97 guard; and screw guard type, V911 guard.

Cast aluminum guards. Cast Feraloy condulets.

Made of composition.

No. VS110.....each \$.65

If specified on order, lamp receptacle with lamp grip will be furnished at an advance of 10 cents in price.

## AL Series Flexible Fixture Hanger Condulets

### For Pendent Fixtures

AL series Condulets provide a flexible suspension for electrical fixtures. The fixtures are suspended from a universal joint which assures that the fixture will hang plumb. It also prevents breaking the fixture stem at the point of suspension, due to strains set up by the wind or by accidental impact. This universal joint permits the fixture to swing through an angle of about 20 degrees in any direction from the perpendicular.

No. AEQ021.....	each 3.00	....
No. AEQ031.....	each	\$3.25
No. AEQ041.....	each	4.50

For use with types BRB, BRD, BRG, BRM, BRME, BRMF, BRP, BRY, GSP, and QE plug receptacle housings. The 30-ampere plugs are arranged for soldered terminals. The 20-ampere plugs are equipped with binding screw terminals. Plugs so equipped with binding screw will not take wires larger than No. 12; consequently, these plugs are rated at 20 amperes. Otherwise, the 20 and 30-ampere plugs are exactly alike.

**GROUNDING.**—Provision is made on these plugs for an extra grounding wire in the cable for grounding the frame of the portable device to the shell of the plug. The grounding or safety circuit is completed through the shell of the plug, the detent spring, the receptacle housing, and the conduit system. The detent spring in the receptacle has three branches, two of which make contact before and break contact after the main circuit contacts. This method of grounding is N. E. C. standard.

### For Type BP Plugs

For use between plug receptacle housings and flange on all 30-ampere, 250-volt a.c. watertight plugs. Size \_\_\_\_\_

			Size	
		2-Pole	3-Pole	4-Pole
No. ....	Gask	131	Gask 141	Gask 141
Each. ....	\$	.05*	.10	.10

\*Can be used on 20-ampere, 125-volt d.c. circuits; or on 20-ampere, 250-volt d.c. circuits if circuit is broken before plug is withdrawn.

†Clamp opening  $\frac{1}{2}$  to  $\frac{7}{32}$ -inch takes most of the 2-wire and 3-wire rubber sheathed, fabric sheathed, and deck cables No. 14 to No. 8.

†Can be used on 25-ampere, 125-volt d.c. circuits; or on 30-ampere, 250-volt d.c. circuits if circuit is broken before plug is withdrawn.

Clamp opening  $\frac{1}{2}$  to  $\frac{7}{8}$ -inch takes  $\frac{3}{8}$  and  $\frac{1}{2}$ -inch flexible conduit, No. 14 to No. 8 two or three-conductor armored cable, and most of the 2-wire and 3-wire rubber sheathed, fabric sheathed, and deck cables No. 14 to No. 8.

Clamp opening  $\frac{7}{8}$  to 1 $\frac{1}{8}$ -inch takes  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch flexible conduit, No. 10 to No. 6 three-conductor armored cable, and most of the 3-wire and 4-wire rubber sheathed, fabric sheathed, and deck cables No. 12 to No. 6.

¶Also for use with type BR connector receptacles.

\*\*Prices will be given for gaskets of the same catalog number in quantities of 500 or more.

\$12.00**Type FHRC Thermostat Condulets**

Furnished with thermostat, thermometer, and mercury tube switch.

Has 3/4-inch hub, through feed.

No.	Each	Range of Thermostat Degrees F.	Use
FHRC226	\$15.50	25 to 60	Refrigeration
FHRC237	15.50	38 to 70	Heating
FHRC258	15.50	56 to 80	Heating
FHRC269	15.50	65 to 90	Air Conditioning

## Crouse-Hinds Enclosed Safety Switch Condulets

Weather Resistant  
(Raintight)

Type WMKS

With Interlocking Plug  
Receptacle

Type WMK

Type WMK condulets are furnished with switches and are especially suited to locations where a strong, durable case and switch mechanism are required. May be used indoors or outdoors, and in all places except hazardous locations.

Listed with 2 threaded conduit openings of the same size, one at the top and one at the bottom. Other arrangements and sizes of conduit openings can be furnished and prices will be quoted upon request, if accompanied by a full explanation of requirements. An interlock is provided which prevents the opening of the enclosure except when the switch is in the off position.

## Mine Signal Switches

## Types AF and AFB

Operated by a pull rope. Weight of pull rope supported by a spring packed in grease.

Furnished with single-pole, double-make switches; heavy duty push button switch, or a spring contact switch. Operated by spring plunger when rope is pulled.

Normal position of Type AF is open; of Type AFB, closed. Wires enter through clearance holes in the flange on switch mechanism.

Type AF	No. Type AFB	Each	*Initial Pull Lb.	†Final Pull Lb.	Total Wt. Pounds Pull Rope Including Moisture	Additional Pull Req. to Operate Switch Pounds
AF7	AFB7	\$10.00	7	10	7 to 0	3 to 10
AF10	AFB10	10.00	10	15	10 to 0	5 to 15

	2 3/8	3 1/8	UNF5	1.80
	2 3/8	3 1/4	UNF6	2.75

\*Male end is given first.

## Type UNA Universal Unions

## Schedule CE

A convenient union for conduit joints made at angles from 90° to 180°. A single clamping nut provides easy adjustment to required angles.

Unless a Type UNA universal union is placed at or near an outlet, or unless it is installed at an angle of about 140° to 180°, it may prove to be difficult to fish wires through union. For this reason, these devices are not approved as conduit unions for general use.

For use only if adjacent to a Condulet. Explosion-proof and dust-tight.

let. Size In.	Explosion-proof In.	Width In.	No.	Each
1/2	4	2 1/8	UNA16	\$1.45
3/4	4 1/2	2 3/8	UNA26	1.75

## Type UCT Adapters

For electrical metallic tubing which has the same inside diameter as the corresponding size of standard rigid conduit; therefore, the outside diameter of E.M.T. is considerably less than corresponding sizes of standard rigid conduit. This gives an opportunity for use of an adapter in standard Condulet threaded hubs. Type UCT screws into tapered threaded hub of Condulet and securely grips E.M.T.

### Type CUC Sign Condulets

Used for lighting a bracket support on sign posts or arms. Has bushing that extends into the pipe through a  $1\frac{1}{16}$ -inch hole drilled in the pipe.

Malleable iron clamp is held by two screws for securing the Condulet to the pipe. The gasket provided makes a watertight joint between the Condulet and the pipe.

A threaded dome cover provides access to wires and splices and makes a watertight enclosure.

SIZE, INCHES		No.	Each
Support Pipe	Bracket Arms		
1	$\frac{1}{2}$	CUC13	\$1.00
$1\frac{1}{4}$	$\frac{1}{2}$	CUC14	1.05

2	$\frac{3}{4}$	CUC26	1.25

### Type CUH Hub Plates

For Type CUC Sign Condulets

Used for connection of  $\frac{3}{4}$ -inch conduit to sign standards for leading circuit wires into or out of the sign standard.

Has bushing that extends into the pipe through a  $1\frac{1}{16}$ -inch hole drilled in the pipe.

Fastened to the pipe with two 12-24 machine screws, requiring two tapped holes in the pipe,  $2\frac{3}{4}$  inches on centers.

SIZE, INCHES		No.	Each
Support Pipe	Conduit		
2, $2\frac{1}{2}$ , 3	$\frac{3}{4}$	CUH28	\$.25

### Type PED Condulet Pedestals

Threaded

Not Threaded

Rigid support for Condulets mounted on conduit that projects through the floor.

### Type WH Industrial Signal Condulets

With Vibratory Horn Unit

Type WH  
With Grill

Type WH  
With Single Projector

Type WH  
With Double Projector

Type WH  
Dimensions

Used as code or call signals, alarms, and for various other signalling applications in industrial plants, warehouses, mines, etc.

Raintight and suitable for use inside in non-hazardous locations or outside where exposed to the weather.

Housings have mounting feet with fastening holes and a hub for  $\frac{1}{2}$ -inch threaded conduit.

#### With Grill

\*If supply circuit is a.c., specify the frequency when ordering. Available in 25 to 40-cycle range.

## Crouse Hinds Explosion-Proof Equipment

Used in locations which are hazardous because of the presence of explosive atmospheres which require different electrical wiring and apparatus than in locations in which such hazards do not exist. Explosive atmospheres may exist because of the presence of such gases as:

<b>Hydrogen</b>	<b>Ethylene</b>	<b>Gasoline Vapors</b>
<b>Natural Gas</b>	<b>Butane</b>	<b>Ethyl Ether</b>
<b>Manufactured Gas</b>	<b>Cyclopropane</b>	<b>Acetone</b>
<b>Alcohol</b>	<b>Lacquer Solvents</b>	

Many dusts, when thrown into the air, create explosive atmospheres. Among the more common dusts are those of certain metals, notably aluminum and magnesium; those of carbon black, coal, and coke. All of the foregoing have the further hazard of being electrically conductive; therefore, they must be prevented from being deposited on live parts of electrical apparatus where they would form short circuits and consequent explosions.

Dusts of all cereals, because of their lightness and highly combustible natures, form atmospheres, which, when ignited, explode with great violence.

In addition to the flammable gases, vapors, and combustible dusts are easily ignitable fibers, which, while they do not create explosive atmospheres, they do introduce the danger of flash fires which are near explosive in violence.

In all of the above locations, fires from electrical causes may occur because of exposed arcs, flames, sparks or particles of burning material escaping from enclosures. Also, apparatus operating at temperatures sufficient to ignite the gas, vapor, dust or fibers may be the cause.

### National Electrical Code

Article 500 of the National Electrical Code is devoted exclusively to locations deemed hazardous because of the expected continual or occasional presence of explosive gases, vapors, combustible dusts, and easily ignitable fibers. In the code, these locations are classified substantially as follows:

**Class I**—Locations hazardous because of dangerous concentrations of flammable gases or vapors.

**Class II**—Locations hazardous because combustible dusts may be present in the atmospheres in dangerous amounts.

**Class III**—Locations in which easily ignitable fibers are present in sufficient quantities to create a hazardous condition.

All of the above classes are divided into two divisions. In general, Division 1 includes localities where the hazardous material is used or processed, while Division 2 includes localities of lesser hazard such as storage areas, or where dangerous conditions are not likely to exist because of other precautions.

In locations where the danger is due to flammable gases or vapors (Class I), the Code requires explosion-proof equipment. This does not mean vaportight.

**Explosion-Proof Equipment** is designed on the supposition that the enclosure will become filled with the explosive mixture. To be explosion-proof, then, the enclosure must be strong enough to withstand an explosion of the trapped gas or vapor mixture. Furthermore, all joints in explosion-proof enclosures must prevent the issuance of flames. In addition, these devices must operate at temperatures which will not ignite the surrounding atmosphere. Vaportight equipment is not built to withstand the conditions stated above and is, therefore, not safe for use in Class I locations.

**Dust-Tight Enclosures** are required for Class II locations according to the Code. Enclosures intended for ordinary non-hazardous locations are not dust-tight and should not be used where the Code specifically requires dust-tight construction.

Apparatus such as motors and lighting units, which operate at appreciable temperatures, must be designed so as not to reach dangerous temperatures even when blanketed by heavy deposits of dusts. Ordinary vaporproof fixtures do not have sufficient radiating ability to make them acceptable for use where combustible dusts are likely to collect on them.

Condulets intended for use in hazardous locations are manufactured to the exacting standards of the Underwriters' Laboratories, Inc. Conformity with those standards is assured by careful design, workmanship, and inspection.

The Condulet line is so complete that there is never any difficulty in choosing the proper Condulet for a particular purpose.

If specified on the order, CPS Series Condulets will be furnished with fastening lugs at an advance of 10 cents in the list prices.

## Type ESC Junction Condulets

Schedule CE

Explosion-Proof and Dust-Tight

For Pulling In or Splicing Conductors

Class I, Group D; and Classes II and III

For use in hazardous locations, and designed to afford a convenient opening in the conduit system for pulling in or splicing conductors. They have threaded hubs for rigid conduit.

The body is cylindrical with a long and wide opening in the front between the threaded end portions.

Hub Size In.	No.	Each	Overall Length, In. Conduit Pulled Open	Opening Only

4	ESC10	65.00	81	38

## Type EJH Junction Condulets

Explosion-Proof and Dust-Tight

For Pulling In or Splicing Conductors

Condulet body has four bosses located 90° apart around the sides and one boss in the center back. These bosses can be drilled and tapped for 1/2 or 3/4 inch conduit.

When ordering include sketch showing location of holes to be drilled and tapped and size desired. Price of condulet includes drilling and tapping.

With Flat Cover			
Inside Depth Inches	No.	Each	
2 1/4	EJH50	\$8.00

4 3/8	EJH52	\$8.80	
With 5-Inch Dome Cover			
7 1/8	EJH55	\$9.90	

## Type LBH Condulets

For Pulling Cables

Explosion-Proof and Dust-Tight

Particularly well suited for pulling large conductors or conductors that are stiff because of their lead sheathing.

Covers are domed, which provides room for an easy bend in the conductor, thus avoiding undue strain upon the insulation or lead sheath.

Hub Size In.	No.	Each	Overall Length Inches	Overall Width Inches
1/2	LBH10	\$2.80	4	2 3/4

### Type GUB Dome Covers

When splices in heavy conductors are to be made and enclosed, dome covers are more suitable as the conductors may be pulled in with the ends well out beyond the body opening for splicing.

In ordering dome covers for GUB Condulets deduct the cost of the flat cover which is shown in the listing below, from the cost of the complete Condulet listed above, then add the cost of dome cover selected from the listing below.

Body No.	Flat Cover		Nominal Depth Inches	Dome Cover	
	No.	Each		No.	Each
GUB01	GUB0101	\$3.20	2	GUB712	\$5.90
			4	GUB714	6.70
			10	GUB7110	9.10
			3	GUB723	9.15
GUB02	GUB0102	6.50	6	GUB726	11.40
			9	GUB729	13.65
			12	GUB7212	15.90
			17	GUB7217	19.65

			10	GUB738	16.50
			12	GUB7311	18.20
			14	GUB7313	19.90
GUB04			17	GUB7316	22.45

**Industrial Signal Condulets***Schedule CE***Explosion-Proof and Dust-Tight****Class I, Group D; and Classes II and III**

Housings for each of these signals have sealing hubs at the bottom. Leads from the signal operating means are sealed in these hubs and brought through short pieces of conduit into GUA series junction Condulets where they can be spliced to the line wires.

**Type ETR Bell Signals****Continuous Vibration  
110-Volt Universal Motor Operation**

Hub Size In.	Diam. Bell In.	No.	Each
3/4	6	ETR283	\$71.00
3/4	8	ETR285	71.00

**Single Stroke  
110-Volt, 60-Cycle A.C. Solenoid Operation**

Hub Size In.	Diam. Bell In.	No.	Each
3/4	6	ETR284	\$71.00
3/4	8	ETR286	71.00

**Type ETH Howler Signals**

Also for use as telephone call signal units.

**6 to 250-Volt A.C. Vibrator Type**  
Specify number of cycles desired.

Hub Size In.	Volume of Sound in Decibels at 6 Yards	No.	Each
3/4	92	ETH230	\$58.00

**6 to 250-Volt D.C. Vibrator Type**

Hub Size In.	Volume of Sound in Decibels at 6 Yards	No.	Each
3/4	92	ETH240	\$70.00

**6 to 250-Volt A.C. Vibrator Type**

Hub Size In.	Volume of Sound in Decibels at 6 Yards	No.	Each
3/4	104	ETH231	\$70.00

**6 to 250-Volt D.C. Vibrator Type**

Hub Size In.	Volume of Sound in Decibels at 6 Yards	No.	Each
3/4	102	ETH241	\$80.00

**Type ETH Siren Signals****Motor Operated  
\*6 to 250-Volt A.C. or D.C.  
For Plain Signals**

Hub Size In.	No.	Each
3/4	ETH260	\$175.00

**For Code Signals**

Hub Size In.	No.	Each
3/4	ETH280	\$225.00

\*Specify voltage desired.

**Type ECT Transformer Condulets****Explosion-Proof and Dust-Tight****Class I, Group D, and Classes II and III**

Particularly adapted for use in connection with the EFS Series explosion-proof pilot light Condulets, when the supply current is 230, 460, or 575 volts, 50 to 133 cycles.

Outside dimensions, exclusive of hubs: length, 7 inches; width, 6 1/2 inches; depth, 5 1/2 inches; diameter of cover opening, 5 1/2 inches

Hub Size In.	Rating Watts	No.	Each
3/4	15	ECT211	\$14.80
3/4	50	ECT215	28.50

**Type EMH Instrument Condulets***Schedule CE***Explosion-Proof and Dust-Tight****Surface****Flush**

Furnished with mounting plate and supports for instruments. Four mounting lugs with fastening holes are provided at the back for surface mounting or at the front for flush mounting.

Bodies are equipped with mounting plates and posts to support the instruments near the cover window. This arrangement leaves ample space in back of the instruments for wires and connections. General Electric, Westinghouse, and Weston instruments can be mounted in Type EMH Condulets. Overall Dimensions: diameter of body, 5 3/4 inches; depth of body, 2 3/4 inches; height of cover, 3 inches.

Hub Size Inches	Conduit Openings	No.	Each
1/2	One in Side	EMH521-10000	\$17.00

**Type EVH Explosion-Proof Hand Lamps***Schedule R  
Class I, Group D***Globe with Holder****Guard**

Furnished with lamp receptacle, globe, and guard. Designed to provide the utmost safety, durability, and ease of wiring.

Non-sparking metals are used. Laminated bakelite handle is firmly secured to the cast aluminum body, in which is mounted a keyless, composition lamp receptacle.

Cast aluminum globe holder; clear heat-resisting globe. Diameter of cord, .375 to .625 inch.

**40-Watt, Takes 25 or 40-Watt Lamps**

No.	Description	Each
*EVH40M3	EVH Hand Lamp.....	\$22.00
EVH5	†Clear Globe with Holder.....	8.30
.....	Credit for Holder.....	4.00
.....	†Difference.....	4.30

**100-Watt, Takes 50, 60, 75 or 100-Watt Lamps**

No.	Description	Each
EVH100	EVH Hand Lamp.....	\$45.00
EVH10	†Clear Globe with Holder.....	12.00
.....	Credit for Holder.....	6.50
.....	†Difference.....	5.50
EVH087	Guard.....	3.50

\*Also dust-tight; Class II, Group G, and Class III.

†Globes must be assembled in threaded holder at factory.

Order "Globe with Holder" by number.

†Cost of globe replacement.

## Type EVS Explosion-Proof Portable Lamps

Schedule R

Class I, Group D

Furnished with lamp receptacle, globe, and guard. Same construction as the Type EVA fixtures, with a handle assembly added.

Handle assembly includes a hook and cable clamp. A third terminal is provided in Type EVS for connection to a third wire in the portable cord for grounding the non-current-carrying metal parts of the unit.

Diameter of cable, .250 to .625 inch.

Globe with Holder

No. of Watts	Portable Lamps		*Globes and Holders		Replacement

\*Globes must be assembled in threaded holder at factory. Order "Globe with Holder" by number.

†Cost of globe replacement.

## DL Series Dust-Tight Lighting Fixture Condulets

Schedule R

For Class II, Group G Hazardous Locations when Mounted Vertically

For Classes III and IV Hazardous Locations when Mounted in Any Position

Bodies and hoods are of cast aluminum.

Type DLA pendent type fixtures may be suspended from CPS series Condulets with hub covers.

Type DLC ceiling type is made to mount directly on CPS series Condulets.

## EV Series Lighting Fixture Condulets

Schedule R

Explosion-Proof

Class I, Groups C and D

Hoods are cast aluminum with etched alzak aluminum inner reflectors. Globe holder assembly consists of clear, heat-resisting, impact-resisting, glass globe, equipped with sheet aluminum gasket and cast aluminum mounting and retaining rings. Cast aluminum guards are held to globe mounting rings by machine screws. Furnished without reflectors.

Available in polished aluminum finish for hospital use. For the A-21 standard lamp. Cannot be used with 100-watt A-23 lamp. Should there be a requirement for A-23, 100-watt lamp, use suffix S261 on number. No extra charge for lighting fixture so arranged.

## Type EVA—Pendent Type

Complete with a Condulet body for pendent mounting on a conduit stem. A set screw in hub may be tightened against unthreaded part of conduit to prevent unscrewing from conduit when relamping. May be suspended by a conduit stem from GUA or GUF series Condulets with three-inch cover opening and GUA fixture covers or canopies.

Double Throw (With Off Position)...	1	2	EGP328	27.00
Double Throw (With Off Position)...	1	3	EGP338	33.50

## Type ESP Panelboards

Explosion-Proof, Dust-Tight, Vaportight and Weatherproof

Furnished with branch circuit breakers, main lugs, and terminal connection blocks.

Available with 20, 25, 35, and 50-ampere breakers or combinations of these breakers. Any combination of breakers of 15, 20, or 25-ampere size furnished at \$.50 extra.

## Branch Circuits

Mains—2-Wire, 125-Volt A.C. or D.C.  
Branches—2 Wire, 125-Volt A.C. or D.C.  
Breakers—2-Pole

			Mains—4-Wire, 120-208-Volt, 3-Phase Branches—2-Wire, 120-Volt, Single-Phase Solid Neutral—Breakers—Single-Pole	
4	4	15	ESP504-15	122.00

**Type EDP Panelboards***Schedule CE***With Circuit Breakers****Class I, Group D; and Classes II and III**

Designed for use in hazardous locations. May also be used in non-hazardous locations where corrosive vapors, non-combustible dusts, or moisture are present.

Wired complete. Connections between terminal blocks and circuit breakers are made at the factory. Each circuit breaker compartment is sealed from the T section.

Available with 20, 25, 35, and 50-ampere breakers or any combination of these breakers. Any combination of breakers of 15, 20, or 25-ampere size furnished at \$5.00 extra.

**Type DVP Panelboards***Schedule CE***With Circuit Breakers  
Vaportight****Class II, Groups E, F, and G; and Class III**

Designed to meet requirements for hazardous locations and for locations requiring vaportight equipment.

Circuit breakers and main lug housing are made of cast aluminum with hub plates in two sizes. The smaller unit takes 4 double-pole or 8 single-pole breakers. The larger unit takes 8 double-pole or 16 single-pole breakers.

Panelboards are equipped with 15-ampere, single or double-pole breakers.

**15-Ampere Branch Circuit Breakers**

Orders for panelboards should be accompanied by a sketch showing the number, sizes, and location of hub plates. Any practical arrangement of hub plates will be furnished without extra cost.

Panelboards are also available in larger sizes for 100 and 225-ampere capacity mains.

Special panelboards for 20 or 25-ampere circuit breakers or with mixed capacity breakers can be furnished.

Can also be furnished in cast Feraloy at same prices.

## Type FLF Manual Motor Starting Switch Condulets

With Starter

Through Feed—Two at Bottom

Explosion-Proof, Dust-Tight, and Weather Resistant

Type FLF

Across-the-line starting type with thermal overload trip.

Listed for 1-inch threaded hub arrangements.

Other hub arrangements can be furnished.

## Type EPC Magnetic Motor Starting Switch Condulets

With Starter

3-Phase—60 Cycle

Explosion-Proof, Dust-Tight, Vaportight, and  
Weather Resistant

Class I, Group D; and Classes II and III

Has across-the-line magnetic motor switch for starting polyphase a.c. induction motors.

Available with oil-immersed starter and for 110 and 550 volts.

### 208-220 Volts

## Type EPC Combination Line Starter Condulets

With Thermal Air Circuit Breakers  
and Starters

Explosion-Proof, Dust-Tight,  
Vaportight, and  
Weather-Resistant

Class I, Group D; and Classes II and III

For use in hazardous locations.

The combination starter provides circuit breaker disconnect with short circuit and overload protection for the motor circuit plus undervoltage release and overload protection for the motor.

Available with oil-immersed starter and for 110 or 550 volts.

### 208-220 Volts

**Type FLS Motor Circuit Switch Condulets**

**With Switch—Not Fusible**  
**Explosion-Proof—Dust-Tight**  
 Class I, Group D; and Classes II and III

For motor disconnects to comply with code requirements for installation of a disconnect switch within sight of the motor.

The fuseless switch is the sliding action quick-make quick-break type with double break positive pressure contacts.

**Type FLB Circuit Breaker Condulets**

**For Feeder and Branch Circuit Protection**

**Explosion-Proof—Dust-Tight**  
 Class I, Group D; and Classes II and III

For service entrance, feeder, or branch circuit protection; for lighting, appliance, and motor circuits.

Not recommended as a substitute for motor running protective devices.

For all hazardous locations.

Complete protection where exposed to corrosive vapors, abrasive dusts or weather.

**50-Ampere Frame Size**

**With Non-Interchangeable Thermal Trip**

## Type DVS Circuit Breaker Condulets

Classes II and III

For service entrance or branch circuit protection; for lighting, appliance, heating and motor circuits.

Provides maximum safety and convenience of installation in hazardous locations.

Gives complete protection where exposed to corrosive vapors, abrasive dusts, or weather.

## 50-Ampere Frame Size

With Non-Interchangeable Thermal Trip

## Type FLS General Use Switch Condulets

Schedule CE

## Explosion-Proof and Dust-Tight

Used as motor disconnects in hazardous locations.

The single throw, and the double throw switch Condulets with no off positions, are furnished with tumbler type quick make and break switches.

The double throw and motor reversing switches with off positions are slow-make and quick-break. The slow-make permits proper control for jogging service.

## Single Throw—Tumbler

30 Amperes, 250 Volts

5 Amperes, 600 Volts, D.C.

## Type HRC and HR Thermostat Condulets

Explosion-Proof—Dust-Tight

With Thermostat, Thermometer, and Mercury Tube Switch Class I, Group D; and Classes II and III

Meet the requirements of the National Electrical Code for control devices used in Class I hazardous locations.

The explosion-proof housing of the Type HRC is cast aluminum and is provided with two hand holes, one on the side for making connections and one on the back for access to the mercury tube.

Union hubs on each end make installation and removal of the entire device a matter of minutes.

Type HR Condulet consists of a body and cover. The temperature element is mounted upon the front of the cover while the switch is located within the Condulet. The body has two mounting feet and one 3/4-inch hub for conduit. The hub may be at top or bottom as desired.

## Type HRC

Hub Size Inches	Use	Range of Temperature Degrees Fahr.	No.	Each
1/2	Refrigeration	25 to 60	HRC126	\$30.00
	Heating	38 to 70	HRC137	30.00
	Heating	56 to 80	HRC158	30.00
	Air Conditioning	65 to 90	HRC169	30.00

## Type HR

	Heating	45 to 75	HR42A-23	\$30.00
	Heating	55 to 85	HR42A-24	.....
	Air Conditioning	65 to 95	HR42B-25	30.00

## Type EHS Switch Condulets

## Explosion-Proof

Class I, Groups C and D

For flush mounting in hospital operating rooms and similar hazardous locations.

Consists of a body and a switch unit.

Available with one, two or three switches.

Design permits either hand or elbow operation. Chromium plated.

## Single Switch

Style	125 Volts	250 Volts	Hub Size Inches	Complete No.	Each	Switch Only No.	Each

Also available in plain finish; deduct \$6.00 from prices.

## Type EHS Signal Light Condulets

Explosion-Proof

Class I, Groups C and D

For flush mounting in hospital operating rooms and other similar hazardous locations.

Includes candelabra base receptacle and 6-watt, 120-volt type S-6 clear bulb lamp with colored glass hood, face plate, and adjustable threaded adapter. Chromium plated.

No. of Signals	Hood Colors	Hub Size Inches	With Signal Light No.	Each
1	Green	1	EHS315	\$30.00
2	{ Amber Green }	1	EHS325	30.00

Also available in plain finish; deduct \$4.75 from prices.  
For 220-volt lamp add suffix V2 to number and \$.35 to prices.

## Type EHS Thermostat Condulets

Explosion-Proof  
Chromium plated.

For Heating

Hub Size Inches	Range of Temperature Degrees Fahr.	With Thermostat No.	Each
1	45 to 75	EHS338	\$39.25

For Air Conditioning

Hub Size Inches	Range of Temperature Degrees Fahr.	With Thermostat No.	Each

## Type ESW Tumbler Switch Condulets

Schedule CE

## Explosion-Proof

Class I, Groups C and D

For flush or surface mounting in hospital operating rooms and similar hazardous locations.

Primarily for installation where conduit is run on the surface of walls or partitions. May also be used with concealed conduit.

Consists of a body, a switch unit with cover and attached switch enclosure. The switch unit is reversible on body.

Outside dimensions of body exclusive of hubs: single-gang,  $3\frac{1}{4} \times 3\frac{1}{4} \times 3\frac{1}{8}$  inches; 2-gang,  $5\frac{3}{4} \times 3\frac{1}{4} \times 3\frac{1}{8}$  inches; 3-gang,  $8\frac{1}{4} \times 3\frac{1}{4} \times 3\frac{1}{8}$  inches.

Also available in plain finish for flush mounting and plain finish only for surface mounting.

\*Combinations of different switches can be furnished if specified when ordering.

†Momentary contact: M.O., normally open.

†Momentary contact: M.C., normally closed.

Available in 4 and 5-gang and in plain finished covers.

## Delayed Action Arktite Plugs and Receptacles

Schedule CE

## Explosion-Proof

## Type CES Receptacle Equipment

Style 2—Grounded through Extra Pole and Shell  
230-460 Volts, 60 Cycles, A.C.

Includes Condulet, receptacle, and receptacle housing.

Has three hubs, two of which are furnished with threaded pipe plugs.

STYLE	Wire	Pole	Phase	Maximum Horsepower	Maximum Amperes	Hub Size Inches	No.	Each
2	3	1		$1\frac{1}{2}$ , $1\frac{1}{2}$	7, 30	$\frac{3}{4}$	CES2213	\$23.50

## FSQ Series Interlocked Plug Receptacle and Switch Condulets

Explosion-Proof and Dust-Tight

Class I, Groups C and D; Class II, Group G; and Classes III and IV

Type FSQC, with Threaded Housing

Type FSQC, with Spring Door

Furnished with tumbler type switch and receptacle, either with threaded housing or spring door housing.

Takes FP and BP plugs.

Type FSQ

Type FSQC

## With Threaded Housing

30-Ampere, 250-V. A.C. or D.C.  
2-Hp., 230-V., 1-Hp., 460-V. A.C.

\*Order by number.

## Plugs for FSQ Series Condulets

Schedule CE

Furnished with cable grip and rubber bushing. Grounded through extra pole and shell. Made of cast aluminum.

Type FP

Type BP

## Type FP—For Threaded Housings

Wire	Pole	Cable Diam., In.	No.	Each
2	3	.500 to .875	FP323	\$6.00
3	4	.500 to .875	FP334	7.00

## Type BP—For Spring Door Housings

2	3	.375 to .500	BP49	\$6.00
2	3	.500 to .625	BP59	6.00
2	3	.625 to .750	BP69	6.00
2	3	.750 to .875	BP79	6.00

## Type EYS Sealing Condulets

## Explosion-Proof

For Sealing Vertical Runs of Conduit

In hazardous locations, Class I, the conduit system should be sectionalized by sealing at frequent intervals. Furnished with pipe plug.

## With Female Hub Top and Bottom

Hub Size Inches	Length Inches	Turn- ing Radius Inches	Approx. Internal Volumes Cu. In.	No.	Each
1/2	3 3/32	1 5/8	1	EYS1	\$ .65

## Type EZS Sealing Condulets

## Explosion-Proof

For Sealing Vertical or Horizontal Runs of Conduit

Condulets have round cover openings and provide ample room for placing dams around and between conductors.

Hub Size Inches	Length Inches	Turn- ing Radius Inches	Approx. Int. Vol. Cu. In.	No.	Each
1/2	4 3/16	1 3/4	5 1/2	EZS1	\$1.15

2 1/2	7 13/16	3 3/8	55	EZS76	7.40
3	8 5/8	3 3/4	88	EZS86	10.70

\*Male and female hub listings include a close conduit nipple which may be used interchangeably in top or bottom hub.

†With cover removed.

## Type ECD Inspection and Drain Sealing Condulets

Schedule CE

## Explosion-Proof

For Sealing Vertical Runs of Conduit

Provides conduit systems in Class I hazardous locations with a means by which the systems can be drained of water, if there is a likelihood of water accumulation.

## Inspection Seal Condulets

Hub Size Inches	Length Inches	*Turning Radius Inches	Internal Volume Cu. In.	No.	Each
1/2	4 3/16	2 1/16	5	EZD10	\$1.35

## Type ECD Drain and Breather Valves

## Explosion-Proof

Class I, Group D

For Water Only Automatic

For Water Under Oil, Manual

For Air Only Automatic

Type ECD breather valve is similar to Type ECD drain but is designed to be installed in the top of explosion-proof housings, allowing air to pass in or out as conditions vary. The labyrinth handle is a rotating cap to prevent dirt from interfering with the action of the valve.

Size Pipe Thread Inches	For Water Only	For Water Under Oil	For Air Only

1/2	1.65	1.65	1.65

## Type EC Flexible Couplings

Schedule CE

Explosion-Proof, Dust-Tight, and Weatherproof  
Class I Group D, and Classes II and III

For use in hazardous locations where it is necessary to employ flexible fittings, as at motor terminals. Suitable for switchboard and other wiring in refineries, for gasoline pumps, and explosion-proof floodlights.

Also watertight, and are, therefore, suitable for use in damp locations or under water, such as connections to underwater floodlights and fountain lights.

## Type UNL 90° Angle Unions

Schedule CE

Explosion-Proof and Dust-Tight

For connecting conduit to a Condulet.

Size Inches	A	B	C	No.	Each
1/2 to 3/4	2 3/4	1 3/4	1 5/8	UNL125	\$1.40
3/4 to 1/2	2 1/8	1 3/4	1 5/8	UNL215	1.40
3/4 to 3/4	2 3/8	1 3/4	1 5/8	UNL205	1.40

\*Size of right end is given first.

## Type UNA Connectors and Unions

A convenient coupling or union for conduit joints made at angles from 90° to 180°. A single clamping nut provides a union feature as well as easy adjustment to required angles.

Unless a Type UNA universal union is placed at or near an outlet, or unless it is installed at an angle of about 140° to 180°, it may prove to be difficult to fish wires through union. For this reason, these devices are not approved as conduit unions for general use.

## Box Connectors—Male

For use only if adjacent to a Condulet.  
Explosion-proof and dust-tight.

Size Inches	Length	Width	No.	Each
1/2	4	2 1/2	UNA16	\$1.45
3/4	4 1/2	2 7/8	UNA26	1.75
1	5 1/4	3 1/2	UNA36	2.00

## Universal Unions—Female

Size Inches	Length	Width	No.	Each
1/2	3 3/8	2 1/2	UNA1	\$1.30
3/4	3 3/8	2 7/8	UNA2	1.45
1	4 5/8	3 1/2	UNA3	1.75

## R &amp; S Watertight Air Break Cast Circuit Breakers

Frame ratings are from 15 to 50 amperes, 15 to 100 amperes, 50 to 100 amperes, 70 to 125 to 600 amperes either 250 volts a.c.—125/250 volts d.c. or 600 volts a.c.—250 volts d.c. The maximum rating of each frame size indicates the maximum continuous current-carrying capacity of that frame. On all frames except the 15 to 50-ampere and the 15 to 100-ampere sizes, the thermal and magnetic trip is built into a separate unit, so that the breaker rating can be changed by changing the trip unit. Within the capacity limitations of the various frames, trip units are available in ratings corresponding to standard wire and cable sizes. The breaker unit comes complete with the trip unit assembled to it and requires no adjusting on installation.

Made of cast iron. Corrosion resisting finish.

Furnished with or without circuit breaker.

Enclosures are provided with heavy pads for conduit tapping. When ordering, specify size and location of outlets. Catalog numbers determine size of frame, ampere trip rating and voltage, and should also be given.

\*Customer's breakers will be assembled in the above housing at an additional charge.

†Can be furnished in No. WP4209 or WP4257 enclosure (small size) at \$9.00 reduction in list.

†Can be furnished in No. WP4209A or WP4257A enclosure (large size) at \$9.00 list additional.

## R&amp;S Air Break Circuit Breaker Cabinets

Vaportight and Dust-Tight

Class II, Groups E, F, and G

No. CBC615

Furnished with terminal block, on which is mounted a neutral bus with wire terminals, so that circuit breakers may be used independently or as a panel board.

Enclosure is made of cast iron with corrosion resisting finish.

Outlets: maximum, 2 inches. Specify size and location when ordering.

Can be furnished with 35-ampere or 50-ampere breakers at additional cost.

\*Has no provision for equipment grounding. All others have equipment ground through separate pole.

Plugs (male ends) listed will also fit wall receptacles. These connectors can also be furnished in 600 volts.

## Type A R&S Weathertight Angle Type Receptacles

2, 3, and 4-Wire—Polarized  
250 Volts D.C.—440 Volts A.C.

45° Angle Type

Straight Type

Box and receptacle housing are heavy castings provided with gaskets and a cast, hinged spring flap cover.

Has positive polarization to insure assembly of contact members. Provision is made for grounding to meet Underwriters' requirements.

Plug housing is light in weight and easy to handle.

Outlets: maximum, 15 amperes, 1-inch; 30-60 amperes, 1½-inch; 100 amperes, 2½-inch; 200 amperes, 3-inch.

Specify size and location of outlets when ordering.

Corrosion resisting finish.

Also available for 600 volts a.c.

Straight type: numbers shown are for 45° angle type; for straight type, add prefix RA to number.

## Type B R&S Watertight Angle Type Receptacles

2, 3, and 4-Pole—Polarized  
250 Volts D.C.—440 Volts A.C.

45° Angle Type

Straight Type

Box and receptacle housing are heavy castings provided with a screw thread to take gasketed brass cap and plug collar.

Has positive polarization to insure assembly of contact members. Provision for grounding to meet Underwriters' requirements. External rib to provide visual indication for plug insertion. Large conduit bosses and ample space for wiring.

Plug housing is light in weight and convenient to handle.

Maximum outlets: 15 amperes, 1-inch; 30-60 amperes, 1½-inch; 100 amperes, 2½-inch; 200 amperes, 3-inch.

Specify size and location of outlets when ordering.

Also available for 600 volts a.c.

Furnished with a rubber gland cable outlet.

Corrosion resisting finish.

Straight type: numbers shown are for 45° angle type receptacles; for straight type, add prefix RA to numbers.

## R & S Ever-Lok Receptacles, Plugs, and Cord Connectors

### One Large and 3 Smaller Contacts

The large (grounded) contact A will not fit into any but the one large hole A. The three smaller contacts fit into their corresponding holes. The staggered lugs B and C in the plug shell, will fit only into the corresponding staggered grooves in the shell of the connector or receptacle. (B to B only and C to C only.)

The interiors of molded bakelite are grooved to fit upset lugs on the shells so that improper assembly or alignment of the interior is impossible. Shell caps are fiber lined to prevent stray wire ends touching the shell.

Terminals of the 4-pole devices are marked X, Y, Z, and G (ground). Terminals of 3-pole devices are marked 1, 2, and G. These markings maintain identity of polarity throughout.

### Double Locking and Balanced Support

The outer shell of the plug floats on the inner shell and turns within the limits allowed by two screws in two slots on opposite sides of the shell. As the plug is inserted in a connector or receptacle, the lugs on outer shell ride diagonally down into the funnel-shaped grooves until they strike the bottom. The outer shell automatically turns on its axis by means of a spring in its base, and the lugs snap into position.

This double locking arrangement (on opposite sides of the shell) provides balanced support and prevents poor alignment.

### Locks in Place

To unlock, it is necessary to grasp the plug firmly and give it a short reverse twist to bring the lugs back to where they will pull out of the grooves. Outer shoulders are knurled to facilitate this action, but the lock is positive and the plug cannot be withdrawn without first giving it this reverse twist.

### Unit Assembly

Casings are positively grounded by double phosphor bronze springs. Equipment grounding is secured by a separate set of contacts which make first and break last (as required by Underwriters' Laboratories).

### Positive Grounding

Contacts and terminals are permanently assembled in bakelite body permitting removal of interior only as a unit for wiring. All connections are entirely enclosed, thus obviating accidental short circuits and tampering by inexperienced persons.

## R&S Ever-Lok Fusible Plugs and Connectors

3 and 4-Pole—Polarized  
20 Amperes, 250 Volts D.C.—30 Amperes, 125 Volts D.C.

For protection of branch circuit extensions or for motor overload protection of small motors.

### No. 9114 Standard N.E.C. Fusible Type Plugs

No. 9114

Safety bakelite holder for Standard N.E.C. fuses or Fusetrons.

No. 9114, 3 Fused and 1 Grounded Pole ..... each \$5.50

### No. 9144 Midget Fusible Type Plugs

For Midget fuses or Midget Fusetrons. Enclosure is made of steel. Maximum cable, 5/8-inch diameter. Cadmium plated finish.

No. 9144, 3 Fused and 1 Grounded Pole ..... each \$4.50

### No. 9124 Standard N.E.C. Fusible Connectors

3 and 4-Pole—Polarized  
20 Amperes, 250 Volts D.C.—30 Amperes, 125 Volts D.C.

Complete with safety bakelite holder for N.E.C. fuses. For disconnect use only. Enclosure is made of steel. Maximum cable, 5/8-inch diameter. Cadmium plated finish. Fuses not included.

No. 9124, 3 Fused and 1 Grounded Pole ..... each \$5.00

Poles, 5½-Foot Sections, Steel	each \$4.50					

Matthews Holdfast Lamp Changers

Removes and replaces lamps in high places, such as ceilings, side walls, electric signs, etc. Like a human hand on the end of a wooden pole. Saves time and prevents ladder accidents. To remove or replace lamps from side walls or at an angle, pull cord attached to the swivelled ring, this bends the wristlike coil spring so that the changer will work just as well at a right angle to the rotating pole as in vertical position.

Specially treated wood handles can be furnished in 6-foot sections at \$8.00 per section, including couplings. Prices quoted are for small quantities. Write for quotations on large quantities.

McGill Protector O Lamp Guards

This guard gives full protection to lamp bulbs; the removable trap at bottom prevents pilfering. Yet the trap can be attached and removed quickly and easily for lamp replacement and cleaning—simply press inward on the guard rim where the trap hooks on it and snap the trap on or off.

Made of No. 14 steel wire, heavily tinned, and finished with plain steel screws for attaching to sockets. Made for 25 to 75-watt lamps and for brass and weatherproof sockets with bottom bead measuring from 1 1/16 to 1 3/4 inches in extreme diameter.

All numbers followed by "B" fit any W.P. Socket with bottom bead measuring 1 3/4 inches in extreme diameter.

## Matthews Holdfast Lamp Guards

For Brass Sockets

The rigid construction of these guards; the fact that they are permanently clamped to the socket; and the spiral spring cushion in the center make it a protection against breakage of incandescent lamps. The trap which is clamped across bottom opening prevents unauthorized removal of lamps. Guard is locked to socket by bending set screw.

For Weatherproof Sockets

The hot lamp cannot get closer than one inch to any inflammable material and the guard does not have to be removed from the socket to replace the lamp.

Approved by all insurance companies and underwriters. Guaranteed 10 years. Collars of guards for brass shell sockets are 1 1/4 inches, for weatherproof sockets, 1 1/2 inches.

**For 50-Watt Rough Service, 25 and 40-Watt Mazda Lamps and Other Lamps Not Exceeding 4 1/4 In. in Length and 2 3/8 In. in Diameter**

No. 5730, For Weatherproof Sockets.....per 100 **36.50**

### No. 650 Series McGill Portable Lamp Guards With Rubber Hook Handles

No. 650 MSR

Widely used in airports, machine shops, railroad yards and repair shops.

Socket portion of handle is made of pliable molded rubber; hook is made of hard molded rubber with a steel cord. The socket rubber and hook rubber are thoroughly vulcanized together into a single unit. The rubber hook handle insures against shock while guard is hanging from any angle or place. Cord wires are run through a tough fiber disk and knotted, taking all strain off cord and socket connection.

Cage is made of 10 extra heavy Bessemer steel wires, electrically welded, zinc plated to prevent corrosion. Fiber washers prevent cage screws from dropping out when lamp is changed. Cage does not roll when laid down.

### McGill Portable Lamp Guards No. 7000 Series—With Rubber Handles

No. 7000-SR

These guards are made in a wide range of sizes for every need in industrial plants, garages, railroads, power plants, etc.

The handle is of high quality black molded rubber, formed to provide a solid rubber edge to support a tough fibre disk. Cord wires are run through holes in the disk and knotted, taking all strain off the cord and socket connection.

Cage is composed of ten extra heavy Bessemer steel wires, electrically welded. Cage does not roll when laid down.

\*These guards can be supplied with grounding attachment. For guards so equipped, add 20 cents each to the price.

†Rough service lamp.

The letter "R" indicates a reflector guard.

The letter "S" denotes switch or lever.

Guards can be supplied with thumbnut instead of screw at base of cage at no additional charge.

Cages also supplied for regular weather-proof sockets.

Rubber coated cages available at slight extra cost.

For special Loxon attachment, add 20 cents each.

## No. 7100 Series McGill Portable Lamp Guards

With Rubber Handles

No. 7100

No. 7100 Series incorporates two features: a wire collar instead of a flat steel collar, and a clamp arrangement instead of screws to hold the cage to the handle. This clamp arrangement allows for variation in the size of the handle and makes lamp changing easier and faster because it requires no tools.

No.	Each	Cage	Lamp Size Watts	Socket	Lgth. In.	Wt. Lb. Each

### Protex Double Outlet Portable Lamps

Any of the above numbers can be furnished with plug-in type side outlet which permits a tool to be plugged into the handle of the portable lamp as illustrated.

For Parallel Type Plug. When ordering add letter (K) to above number and add \$1.25 to price.

For Polarity Type Plug. When ordering add letter (Z) to above number and add \$1.35 to price.

For Three Wire Type Side Outlet. When ordering add letter (K3) to above number and add \$1.45 to price.

#### Rubber Insulated Guards

For safe use around switchboards, in electric sub-stations and on electric locomotives. For chemical and oil conditions.

Guard is thoroughly insulated with an even coating of tough rubber to prevent electrical shorts.

For rubber covered type guard on any of the above numbers add letter (I) to above number and add \$3.00 to price.

#### With Fiber Guards

Consists of rubber handle, keyless socket and screwless type of closed end fiber guard with hook and reflector. Guard is made of the

strongest fiber obtainable and is waterproof.

Standard package 30, weight 37 pounds.

No.	Each	Watts	Std. Pkg.	Pkg. Wt. Lb.
117	\$17.50	60-100	30	118
118	7.00	60-100	30	118

\*Without reflector.

#### With Bakelite Guards

Consists of rubber handle, keyless socket and closed end guard with hook. Entire guard is molded Bakelite with a

canvas filler to give it maximum strength.

Standard package, 30.

No.	Each	Watts	Std. Pkg.	Pkg. Wt. Lb.

### No. 1302 Protex Bunghole Lamps

A non-vaporproof unit for inspecting beer, lard, syrup and other barrels used for non-explosive solutions.

Length 30 inches. Outside diameter 1 inch.

Takes 15 watt bulb.

Packed 1 in standard package, weight, 4 pounds.

No. 1302..... each \$19.00

## Safeway Lo-Volt Portable Lamps

75 Watts, 60 Cycles

This portable lamp assures a much higher factor of safety, reducing the possibility of shock and burns when used in boilers, tanks, etc., on steel, cement or damp wood floors and other hazardous places.

Composed of a 75-watt, 125, 32 or 6-volt a.c. transformer, molded into a high quality, heat and oil resisting rubber jacket. Primary lead is a 10-foot, No. 16 all rubber cord, to which is attached a Safeway plug with cord grip. Secondary lead is a 20-foot, No. 14 all rubber cord, and may be equipped with either a Protex or Vaprotex unit.

Packed 1 in a standard package.

## Complete with Protex and Safeway Plug

## No. 123 Protex Waterproof Trouble Lamps

A rubber handle portable lamp with 25 feet of No. 18-2 type S cord and Safeway cap with grip.

Packed 2 in a carton, 12 in a standard package.

Weight per dozen, 46 pounds.

No. 123.....each \$9.20

## No. 1153 Closed End Lamp Guards

For No. 103 Protex Rubber Handle Portable Lamps  
For 200 Watt Globes

Guard is furnished only with hook, no reflector.

Standard package, 30; weight, 27 pounds.

No. 1153.....each \$4.30

## No. 1173 Protex Lamp Guard Handles

## Keyless Socket Type

Oil-resisting handle of rubber compound. Neotex is a special compound embodying Neoprene. It is absolutely proof against oil and many chemicals. No. of watts, 40-200. Standard package, 30. Weight, 30 pounds.

No. 1173, Regular Rubber Handle.....each \$1.70

No. 1173, In Neotex Rubber.....each 3.20

## Drop-Lite Portable Lamp Guards

No. 2060

Consists of a rubber handle, socket, plated wire guard with hook and half shade reflector, No. 18-2 SJ approved rubber cord and non-breakable rubber plug.

Rubber handle is made of an oil-resisting compound and will protect the user against electric shocks and burns and the lamp from breakage. Furnished with or without side outlet; also with or without switch.

Wire guard is heavily constructed. Socket is simple to wire. A strain relief is provided to prevent the wires from detaching.

## Hubbell Lumiline Lampholders

The unique applications of Lumiline Lamps by means of Lumiline Receptacles and Caps are now many and varied, especially in the indirect cove, or trough lighting fields.

Ideally suited for built-in or built-on illumination where space limitation is a factor; showcases, mirrors, scales, signs, display windows, railroad cars, buses; and in all lighting where a tubular source of light is required.

## H & H Lumiline Lampholders

660 Watts, 250 Volts

These lampholders, designed to fit Lumiline Lamps, are supplied in black or white bakelite, either front or back connected styles. Single Lumiline Sockets fit one lamp and the Twin style supports two lamps in line.

There are two parts to each socket, the receptacle and the cap. The cap snaps over the end of the Lumiline Lamp and the circular contact goes into the receptacle with the contact screws facing inwards so that the flat surface is at the end of the lamp. Another lamp can then be installed very closely with only a small space between.

## Benco Weatherproof Sockets

With Type S (1 1/16-Inch Diam.) Screw Thread

Listed by Underwriters' Laboratories

Benco Sockets are made for industrial or heavy duty use. They have highly insulated, rugged interior and strong metal casing. Thread on casing may be used for attaching reflectors with S holder and Benco holders.

### Keyless Type—Medium Base

660 Watts, 600 Volts

Keyless sockets have a porcelain interior and lamp grip. Standard package, 50; carton, 10; weight of standard package, 17 pounds.

Casing material, aluminum; polished finish.

No. 4200, Tapped for 1/2-Inch I.P. Connection per 100 \$78.00  
No. 4201, Tapped for 3/8-Inch I.P. Connection per 100 78.00

### Pull Chain Type—Medium Base

660 Watts, 250 Volts

The inner-pull is a feature of these Benco Sockets. It is a means to make them weatherproof, and the chain action is unobstructed.

Molded composition interior and Benjamin Lamp Grip.

Standard package, 50; carton, 10; weight, 17 pounds.

Pull socket interior packed 50 in a standard package; carton, 10; weight of standard package, 25 pounds.

Casing material, aluminum; polished finish.

No. 4225, Tapped for 1/2-Inch I.P. Connection per 100 \$180.00

No. 4226, Tapped for 3/8-Inch I.P. Connection per 100 180.00

No. 4209, Pull Socket Interior Only.....per 100 150.00

## Benjamin Benco Threaded Holders

With Type S (1 1/16-Inch Diam.) Screw Thread

Benco Holders provide an easy means for attaching shades or reflectors to the Benco Sockets and Outlet Box Fittings. These holders are made to fit any glass or metal reflector with standard neck sizes.

It should be noted, while considering the Benco Holders, that Benjamin Porcelain Enameled Steel Reflectors are furnished with holders for attachment to Benco Sockets and Outlet Box Fittings.

### Polished Aluminum Holders—Weatherproof

## No. 63310 Union Canvas Bakelite Weatherproof Sockets

Used where sockets receive greatest abuse. Made of canvas impregnated with bakelite. Has phosphorus bronze spring contacts. Stranded No. 14 6-inch leads. Rating, 660 watts and 600 volts.

Available with left hand thread, No. 63310LH.  
No. 63310.....per 100 \$45.47

## No. 5464 P & S Bakelite Pin Type Sockets

Medium Base

660 Watts, 250 Volts

For temporary decorative lighting work, for indoor or outdoor use. No stripping, splicing, soldering or tapping of wires. Socket applied directly to wire. Sharp pointed pins pierce insulation and make positive contact. Wires held in place by socket cap.

Socket may be positioned or moved to any desired spacing at any time, as pin contacts will not injure insulation of wire.

A detachable hook is supplied with each socket for hanging socket from tree or messenger wire.

For stranded wire No. 12 or 14. Carton, 10. Standard package, 100.

No. 5464.....per 100 \$28.00

## No. 600 Watertite Weatherproof Sockets

660 Watts, 600 Volts

Used as an under-water unit without injury or short-circuit in socket or lamp. Meets all requirements for outside use. Also, for service in mines, tunnels, boiler rooms, etc., and all places where there is moisture and condensation or where sediments form on sockets.

Standard weatherproof shade holder will fit socket. Fits standard sign receptacle cover.

Outside diameter, 1½ inches. Leads are No. 14 stranded wire; 6 inches long. Carton, 10; standard package, 100.

Weight, standard package, 20 pounds.

No. 600.....each \$3.35

## No. 43310 Union Weatherproof Sockets

Bakelite sockets are recommended where the socket will be subjected to abuse and high temperatures up to 500° C., and with gas filled lamps above 75 watts.

EXTRATUF sockets are recommended where extraordinary rough usage is to be suffered by such installation.

All sockets supplied with spring contact unless solid contact is specified.

Sockets can be furnished with left hand thread if desired.

Medium screw base.

Packed 25 in a carton, 100 in std. pkg.

### Hubbellock Devices For High-Cycle Portable Equipment

These rugged devices break the circuit and seal it in a split second; the safest and most practical means of applying electrical current to industrial use.

The rugged contacts of the cap are machined from heavy brass stock and molded into special, impact-resisting bakelite supporting posts which absolutely prevents shifting out of alignment or bending or twisting, no matter how rough the usage. Positive polarity and ground connection is thus assured at all times under all conditions. The lock is positive with nothing to jam out-of-order and therefore allows no accidental breaking of current with consequent loss of production.

#### 3-Wire Connectors

With Adjustable Cord Grip  
10 Amperes, 250 Volts D.C.; 460 Volts A.C.  
20 Amperes, 125 Volts A.C. or D.C.

No. 23002

No. 23005

Cadmium is standard finish.

If desired with ground shunt from contact to cover or casing, suffix letter G to number.

## Hubbell 10-Ampere Twist-Lock Devices

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

National Electric Code rules advise installation of polarized and grounded devices to protect the users of portable motor driven tools and equipment.

Positive protection against both electrical hazard and disconnection delays is provided by Twist-Lock Polarized Devices. Twist-Lock Devices never part in the middle of a job, no matter how hard the cord is yanked. A lock-fast connection is made by a twist of the cap.

All 3 and 4-wire Twist-Lock Devices are polarized by blades designed to engage correspondingly shaped slots in receptacles or connector bodies. Grounding blade is longer than others so as to make contact first and break last.

### 2-Wire Midget Cord Connectors

Without Cord Grip—.375-Inch Cord Hole

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.

\*Grounded to Casing means that the long blade of the cap and the corresponding contact of the connector body are electrically connected to the outer casing. The corresponding contact of the receptacle is electrically connected to the conduit system. If metallic covering of cable is used for the grounding circuit, connection to the casing is made by means of grounding clips regularly installed in all caps and connector bodies.

†Equipment Ground means that the outer casing of the cap, the connector body casing and the receptacle casing serve as the grounding circuit. The grounding connector is electrically connected to the casing of the cap and connector body by means of a fourth terminal when using non-metallic covered cable. If metallic covering of cable is used for the grounding circuit, connection to the casing is made by means of grounding clips regularly installed in all caps and connector bodies. The receptacle casing is electrically connected to the conduit system.

**Hubbell Twist-Lock 3-Wire Polarized Flush Receptacles and Plates****With Solderless Connections**50 Amperes, 250 Volts D.C.;  
50 Amperes, 600 Volts A.C.

Receptacle and plate will fit FS and FD boxes.

Outlet box is not supplied.

Standard finish, cadmium.

**Nos. 7380 and 7382 Assembled to Outlet Box**

7607	139.00	Composition, with 3 1/4-Inch Cover	10	50	20
7275	141.00	Porcelain, with 4-Inch Cover	5	50	30
20 Amperes, 250 Volts					
6810	\$139.00	Porcelain	10	30	13
7277	154.00	Porcelain, with 4-Inch Cover	5	30	24

If desired grounded, suffix letter G to number.

## Hubbell 3-Wire Polarized Flush Receptacles

### With Close Mounting Strap

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

No. 7214

Screw holes, 1 3/4 inches on centers, tapped for 8x32 screws.

Fits in 1 1/2-inch diameter hole.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.
7214	\$96.00	Composition, Grounded, 2 Binding Screws	10	30	5
7215	96.00	Composition, Not Grounded, 3 Binding Screws	10	30	7

## Hubbell 3-Wire Polarized Duplex Receptacles

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

No. 7051

No. 7208

If desired with ground shunt, suffix letter G to number.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.
7051	\$184.00	Black Bakelite	10	30	12
7208	202.00	Black Bakelite with 4-Inch Cover	5	30	21

## Hubbell Combination 3-Wire and Double T-Slot Receptacles

Each Outlet Rated:  
10 Amperes, 250 Volts;  
15 Amperes, 125 Volts

No. 7333

Fit standard duplex receptacle plates and standard switch boxes.

No.	Per 100	Description	Car- ton	Std. Pkg.	Wt. Lb.
7053	\$165.00	Black Bakelite, Each Outlet Wired Independently.....	10	30	12
7333	174.00	Same as No. 7053, with 4-inch Cover.....	5	30	21
7054	165.00	Black Bakelite, Arranged With One Feed and One Return Common to Both Outlets; 3-Wire End Permanently Grounded to Supporting Strap.....	10	30	12
7334	174.00	Same as No. 7054, with 4-inch Cover.....	5	30	21
7064	165.00	Black Bakelite, Arranged With One Feed and One Return Common to Both Outlets; Grounding Terminal 3-Wire End Equipped With Binding Screw.....	10	30	12
7335	174.00	Same as No. 7064, on 4-inch Cover.....	5	30	21

## Hubbell 3-Wire Porcelain Polarized Receptacles

No. 6047

Screw holes, 1 3/4 inches on centers. Outside diameter of base, 2 1/2 inches.

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

No.	Per 100	Description	Car- ton	Std. Pkg.	Wt. Lb.

## Suitable Fittings for Nos. 7112 and 7512 Receptacles

APPLETON ELECTRIC Co.—19025, 19026, 19010, 19011 Boxes. GSC-2 Cover on GSB-2 Box. 8486 Cover on 4-SJ-½, 4-SJD-½, 4-SJD¾, 4-SJD-1 Boxes. 8469 and 8469-A Covers on 4-S-½, 4-S¾ and 4-S Special Boxes. 14097 Cover on Type FS2-gang Unilet fits 7070 only. 14098 Cover required for 7112 or 7512.

CROUSE-HINDS Co.—2-Gang FS Series Condulets. Covers for use with 7070 on these condulets are S-612—surface type. SS-612—flush type. Covers for use with 7112 or 7512 on these condulets are S-622—surface and SS-622—flush.

NATIONAL METAL MLDG. Co.—24K, 24KK and 24KL Covers on 2400, 2401, 2402, 2403, 2404, 2405 and 2410 Boxes. 25K Cover on 2500, 2501, 2514, 2515 and 2590 Boxes. 30C2 Cover on 3002 and 3012 Boxes. 4230 and 4231 Boxes.

TAPLET MFG. Co.—2-Gang FS Series Taplets. Hubbell Plate Nos. 7072 and 7114 will fit above Taplets.

GENERAL ELECTRIC Co.—SP52C17 and SP52C18 Covers on SP51151 and SP52151 4-inch Square Boxes. SP6751 Cover on SP6733 Box.

STEEL CITY ELECTRIC Co.—2GC Cover on 2G Box and Nos. 52C17, 52C18, 52C19 on 51151 and 52151 Boxes, and 72C18 Cover on 72171 Box.

THOMAS & BETTS.—32 (Box and Cover) and FD Tubelets.

## Hubbell 50-Ampere 3-Wire Power Outlets

With Solderless Terminals

50 Amperes, 250 Volts

No. 9325

No. 9326

No. 9327

Designed to be mounted through a 3½-inch hole.

Receptacle body is of black bakelite. Regularly supplied with grounding slots through plate to accommodate caps with independent ground clips as on Nos. 7923, 7977, 7952, 9304 and 9305. Also takes all standard 50-ampere, 250-volt 3-wire caps without grounding clips.

Receptacle has angle cable grip clamp which will accommodate BX, or other metal sheathed cable, or non-metallic cable measuring .750-inch to 1.187 inches. Diameter of flange is 4½ inches.

Maximum depth from underside of flange to bottom of cord clamp, with largest cable in place is 3½ inches.

Regularly supplied with three nickel plated wood screws.

Specify No. 9325-G if receptacle is desired with one contact grounded to metal casing.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.
9325	\$355.00	Bakelite Receptacle.....	2	10	13
9326	96.00	Stainless Steel Face Plate, Semi-Polished Finish.....	2	10	3
*9327	45.00	Steel Sub Plate, Cadmium Finish	2	10	3

\*No. 9327 sub plate is equipped with an extra set of mounting holes and is for use under the face plate, where it may be necessary to cover up a carelessly cut hole in the plaster wall.

## Hubbell 50-Ampere 3-Wire Receptacles

50 Amperes, 250 Volts

No. 9301 with Cover

No. 9309

Fits standard boxes 4¼ inches square and 2½ inches deep.

Standard finish is brush brass.

No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lb.
9301	\$595.00	Receptacle with Box Cover.....	2	10	17

**H & H Floor Outlets**

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

No. 7797

Made to plug in lamps or appliances without running long cords from the wall.

Made in two styles: bevel edge plate, .060-inch brass, and square edge solid brass plate where it is desired to make an absolutely flush job. Two threaded solid brass covers are supplied, one for completely closing the outlet when not in use; the other with cord hole and bushing to shield the plug cap when connected.

Receptacle is recessed so plug is sunk flush with the floor. Not waterproof, designed for hardwood floors or dry places.

No.	Per 100	Description	Car-ton	Std. Wt. Pkg. Lb.
7797	\$240.00	With Bevel Edge Plate.....	2	10 8
7798	275.00	With Square Edge Plate.....	2	10 8

**H & H Weatherproof Flush Receptacles**

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

No. 7792

A permanent, weatherproof outlet for plugging in outdoor lighting connections or appliances, also for inside installations exposed to moisture.

Cadmium finished .060-inch brass plate and cap. Will not rust or corrode. When not in use, a metal cap screws over the opening — when connected the regular cap may be covered with metal cap No. 7793. A rubber mat fitting under the plate, completes the weatherproofing.

No.	Per 100	Description	Car-ton	Std. Wt. Pkg. Lb.
7792	\$196.00	With Plate, 2-Wire.....	2	10 7
7780	534.00	2-Gang, with Plate, 2-Wire....	2	5 7

**H & H Clock Hanger Outlets**

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

No. 7707

A double service device providing mechanical support for the clock and electrical connection. Receptacle is recessed so the plug cap goes flush with the plate. This allows the clock to hang flat over the outlet, entirely covering it, with all wiring concealed. May be installed in a mantel for shelf clocks.

Standard plate finish is brush brass.

No.	Per 100	Description	Car-ton	Std. Wt. Pkg. Lb.

\*Fits Nos. 7440 and 7077 caps.

No. 7750

**H & H Fan Hanger Outlets**

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

This outlet provides electrical connection and mechanical support for fans. It is easy to install and fits a standard 4-inch square box. Supports a weight many times greater than a fan. Two types are supplied: clamp type for the average job where the outlet fastens to the box cover, and the stud type where hickey fastens to the box stud.

Brush brass .060-inch plate standard on both types.

\*Grounded means that the long contact blade of the cap and the corresponding contact in the connector body and receptacle are electrically connected to the outer casing.

†Equipment ground means that none of the contacts are electrically connected to the shell, but there is an additional terminal for the fourth wire, which is connected electrically to the outer casing. This fourth wire is for equipment ground.

## FA Hanger Outlets

Approved by Underwriters' Laboratories, Inc.

Combines support and electrical connection in one unit. Designed for fan hanger service. Also used with electric heaters, show window spotlights, radio, public address systems, and art pictures.

A permanent feature, built into the structure of the building at the same time as the rest of the equipment.

Correct installation is to center outlet 7½ feet from floor for 9 and 12-inch fans; 9½ feet for 16-inch fans.

Standard package, 20.

## Security Type

Consists of 4-inch square by 1½ inch deep outlet box made of No. 14 gage galvanized steel and ½ inch deep raised box cover. Cover has special plaster keys to securely hold the plaster and prevent it from cracking around the outlet.

Box provides wiring space to serve as a junction box when two or more outlets are connected to the same circuit. Knockouts are provided for ½ and ¾-inch conduit.

Hanger bracket is adjustably fastened to back of box. Bracket carries weight of appliance. Heavy brass adjusting tube threaded into the mounting bracket allows for variation in thickness of plaster. Fan or other appliance is hung upon a ¼-inch steel hanger bolt threaded into the brass tube and finished with a washer and screwdriver type cap-nut.

Face plate, 2½x4¼ inches, is made of .060 brass with brushed finish. Special finishes available at extra cost.

T-slot type, brown bakelite receptacle is riveted to a steel sub-plate.

Approximate weight per standard package, 40 pounds. Complete with Box and Cover.....each \$3.60

## Fixture Stud Type

Similar in design to the Security Type, but the box, with cover and ⅝-inch fixture stud, must be furnished by the contractor. Any 4-inch square by 1½-inch deep standardized outlet with ⅝-inch fixture stud securely fastened to it and ½-inch deep single gang cover can be used. The ordinary type of switch box cannot be used.

Stamped steel adjustable hanger bracket has a cleared hole to fit the fixture stud. Two ⅝-inch lock nuts are included for fastening.

Approximate weight, per standard package, 12 pounds.

Each.....\$2.86

## Type FHSB

Same type of box and cover specified above must be supplied by the customer for Type FHSB.

Formed steel supporting frame is fastened to box cover, and fan or other appliance is attached to it. Receptacle is fastened directly to brass face plate.

This type carries the weight of appliance from box cover, not from back of box.

Approximate weight per standard package, 12 pounds.

Each.....\$2.86

## No. 7707 Clock Hanger Outlets

Provides a dual service, electrical connection and support in one unit.

The recessed receptacle permits the clock to hang flat over the outlet, without exposed or trailing cord, because the plug fits flush with the plate.

Furnished with .040-inch brush brass finished plate and 15-ampere, 2-wire receptacle. Standard package, 10.

Approx. wt. per std. pkg., 5 lb.

No. 7707.....each \$1.51

## P&S Clock Hanger Outlets

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

Outlet recessed for plug cap, allows clock to hang flush with wall.

Nos. 1515 and 1515I are of all-bakelite, one-piece construction with brass hook finished to match outlet.

No. 1534 has T-slot outlet and .040-inch brush brass plate.

## No. 1532 P & S Floor Outlets

Rating—15 Amperes, 125 Volts  
10 Amperes, 250 Volts

Brush brass plate and two flush screw caps. Receptacle is recessed so plug is flush with floor.

Std. pkg., 10; weight, 8 pounds.

No. 1532.....per 100 \$240.00

## No. 903 Benjamin Swivel Attachment Plugs With Short Insulating Ring

660 Watts, 250 Volts—Listed by Underwriters' Laboratories

Swivel shell permits plug to be attached or removed without twisting cord. Has stamped insulating ring, porcelain base, and bakelite bushing with 13/32-inch opening for cord.

Packed 50 in a carton, 250 in standard package; weight, 30 pounds.

No. 903.....per 100 \$40.00

## No. 916 Benjamin Heavy Duty Swivel Attachment Plugs

660 Watts, 250 Volts

For railroad and heavy work. Has chuck type bushing which takes a firm grip on any of the standard portable cords from 2 3/4 to 3/8 inch outside diameter. Standard package, 50; carton, 10. Weight per standard package, 12 pounds.

No. 916.....per 100 \$100.00

## No. 1159 Mica Attachment Plugs

Made of a strong hard mica compound that will withstand hard usage.

Plugs can be furnished with left hand thread if desired. Medium screw.

Packed 10 in a carton, 100 in std. pkg.

Weight per standard package, 17 pounds.

No. 1159, Right Hand.....per 100 \$37.90

No. 1159LH, Left Hand.....per 100 42.95

## No. 1409 Safeway Weatherproof Rubber Plugs

660 Watts—600 Volts

Body made of oil and heat resisting rubber compound, nickel plated screw base with No. 14 stranded, all rubber 6-inch leads.

Packed 10 in carton, 100 in std. pkg., wt. 15 pounds.

No. 1409.....each \$.40

## No. 720 Protex Molded Rubber Twin Sockets

No. 720

Made of one-piece solid rubber, into which all metal parts have been molded. The solid rubber construction protects the lamp filament from breakage due to vibration of nearby heavy machinery.

Packed 5 in a carton, 25 in a standard package.

Weight per standard package, 6 pounds.

No. 720, with Screw Base..... each ....

**No. 1400 Safeway Plugs**

15 Amp., 125 Volts; 10 Amps., 250 Volts

A 2-wire, parallel, rubber-covered plug for industrial and railroad service. Brass blades can be removed from the body.

Approved by Underwriters' Laboratories. Carton, 10; standard package, 100. Weight, standard package, 13 pounds. No. 1400,  $\frac{1}{16}$ -In. Cord Hole.....each \$.40

**No. 1402 Safeway Rubber Covered Plugs****2-Wire Polarity**

15 Amp., 125 Volts—10 Amp., 250 Volts

For heavy duty industrial service. Brass blades mounted on insulating material; removable. Practically non-breakable.

## P & S Surfex Wiring Devices

A simple, safe, surface wiring device that is easily installed—just mount the device, run the wire, and connect to terminals. It makes the work of circuit-testing easier and simpler because the user needs only to disconnect the cable from the terminals, and properly connect it up again. No longer is it necessary to tear out expensive taping, soldering and splicing to locate the trouble on a dead line. Surfex saves a foot of cable on every outlet, in addition to boxes, connectors, solder, rubber tape and friction tape.

The Surfex Wiring Device has the following features: rigid cable clamp fastening to metal backplate—suitable for armored or non-metallic sheathed cable; 1 $\frac{1}{4}$ -inch width of all devices permits mounting on 2x4-inch studs; large wiring chambers for cross overs; No. 8 wood screws for mounting; easy wiring terminals—no wire loops necessary; bus bar for feed through circuits; and metal reinforcing back plate which carries ground through device when armored cable is required. Made of porcelain; gives full protection against shock, corrosion and short circuit. Brown finish.

**No. 4529 P&S Single Weatherproof Outlets****Parallel Slots**

15 Amperes, 125 Volts—10 Amperes, 250 Volts

No. 4529

May be installed in a single gang switch box or flat face FS fitting. Sealed with cover and plate gaskets for complete protection. The plate is .060-inch brass with baked-on aluminum finish.

Lock Switch

This device incorporates the regular P&S Despard 1320 outlet which has constant tension contacts, gripping both sides of the plug blades. When outlet is in use attachment plug cap may be covered with No. 4528 protective cap.

Due to the fact that this device incorporates the standard No. 1320 P&S Despard outlet, it can be readily converted into a weatherproof lock switch by removing outlet and substituting a P&S Despard switch of the 1311-L type (see illustration above at right).

Carton, 2. Standard package, 10; weight, 7 pounds.  
No. 4529.....per 100 \$178.20

### P & S Despard Specifications Type Flush Tumbler Switches

One, two or three switches may be installed in a single-gang box. May be wired with either common or separate feed. When installing these switches, it is necessary to use mounting straps. Switches will satisfactorily handle Type C lamp loads and carry Underwriters' T rating as indicated below.

Made of bakelite; front and back are enclosed, making switch dustproof.

The handle and strap are insulated from the mechanism. Switching mechanism has a 4-point break to insure against breakdown from overloads. Contact member is designed to snuff all arcs.

Conform to the most rigid government and architectural specifications. Each switch is tested under full load current in the factory before shipment.

Outlet Rating; 15 Amperes, 125 Volts;

10 Amperes, 250 Volts

#### Single Convenience Outlets

No. 1320

No. 1341

No. 1327

For assembly in combination with switches, radio outlets, or any other P & S Despard devices. These outlets have bakelite bodies, and double, wide contact surfaces with spring tension sufficiently removed from heat of arc to prevent withdrawal of temper, which is the cause of loose contacts.

Where one convenience outlet is to be switch-controlled, a combination of two No. 1320 or 1420 outlets having separate feed and return may be installed. Where common return is desired, the two negative terminals may be bussed together.

New Process Metal Plates for P & S Despard  
Devices

No. 1781G

No. 1791V

No. 1791B

**Brown-X** and **Ivory-X**. These plates have multiple coat of baked-on, insulating enamel. Closely resembling bakelite, they have all the sturdiness of metal plates. They will not warp or crack, and their surface is satisfactory for painting.

**Chrome-X**. These plates are made of .040-inch stainless steel. Their soft, semi-polished, silverlike finish is right in the metal and will last indefinitely.

**Brown-X**

### H & H Metal Plates

**SPACINGS.**—Plates which are to be attached to flush devices have screw holes spaced  $2\frac{3}{8}$  inches on centers. Gangs are spaced  $1\frac{1}{16}$  inches on centers horizontally, and  $3\frac{3}{8}$  inches on centers vertically.

**ROUND CORNERS.**—Solid plates can be furnished on special order with round corners at an advance in price. Prices upon application.

**SQUARE CORNERS AND SQUARE EDGES.**—Solid plates can be furnished without the usual bevel edge but with square corners and square edges at the same price as solid plates, if the dimensions and spacings are standard. Otherwise, special prices apply.

**ENGRAVING OR MARKING.**—Plates can be engraved in block design lettering of any height. Prices upon application.

**HAMMERED BRASS.**—Solid plates can be furnished on special order with a genuine hammered finish. Prices upon request.

**RETURN OR EXTENSION EDGES.**—These plates are used when the wall case or switch box projects from the wall and the devices are not flush. Prices upon application.

**COMBINATION PLATES.**—A combination plate is made to order from 2 or more of the standard units listed below. If spacings or dimensions differ from standard units, special plate prices apply. The list price of any combination plate is the sum of the list of the standard units making up the combination.

The same symbol letters are used for struck-up or solid plates and the thickness of brass desired must be specified as well as the symbol letters. Three thicknesses of brass are supplied, .100 inch (solid), .060 inch and .040 inch.

Combination plates are made only on special order and are therefore not subject to return for credit.

The standard package is 10 plates of the same combination, carton, 10.

## Hubbell Brass Flush Plates

For Single and Double Telephone Outlets

\*Screw spacing, 2 3/8 inches. Adapter to 3 3/32 inches for box mounting supplied with this section.

†Only supplied in solid brass.

‡Available in .060-inch metal only.

§Combinations embracing two adjacent G, Y, or K sections for Nos. 7250, 7310, 7410 or 7438 receptacles, require an extra blank gang between them to provide space for insertion of caps.

¶Tandem.

Tandem or special size combination plates can only be supplied in solid brass. When arranged in tandem, add 25% to solid price of horizontal plates.

In ordering combination plates, use letters and thickness of metal in the same relative position as required. For example: P C G .060-inch would cover a plate to take one toggle switch, one bull's-eye, and one single convenience outlet—the bull's-eye to be in the middle, to be of .060-inch brass.

**Bryant Flush Tumbler Switches****General Purpose Type—With Porcelain Cups****T Rating for Use with C Lamps**

No. 3951

Dimensions of porcelain cups: Length,  $2\frac{3}{4}$  inches; width, No. 3951 series  $1\frac{1}{2}$  inches, others  $1\frac{1}{4}$  inches; depth,  $1\frac{3}{8}$  inches.

Supporting screw spacing,  $3\frac{3}{4}$  inches.

Screws for mounting are furnished.

When ordering combination plates, specify S sections to accommodate these switches.

## Bryant Heavy Duty Enclosed Switches

Listed by Underwriters' Laboratories

No. 5421 Single Pole, Brown Bakelite Handle

No. 5432 Double Pole

No. 6000 Lock Switch Key

With bakelite handles and casings, for standard tumbler switch plates and single gang boxes. Especially designed and built to carry the initial current surge on Type C lamps, and for general heavy duty service.

### Bryant Expulsion Type Switches

For Inductive Loads and Electric Railway Circuits

Designed with barriers between parts of opposite polarity which are effective in limiting the arc formed when the circuit is broken.

The window in the cover of the indicating switch, is located so that, when switch is mounted on a wall above eye level, the indications can be read right side up under the handle.

Slotted bases furnished on specifications.

Packed 2 in a carton, 50 in a standard package.

## P&S Specification Type Flush Tumbler Switches

All Bakelite—Totally Enclosed  
T Rating for Type C Lamp Load

The mechanism is fully enclosed in a dustproof bakelite housing. Made to fit rectangular opening brass or bakelite plates.

Meets all requirements for specification work or all-purpose wiring.

Small size allows ample room in box for wiring and splicing.

Size for single-pole and 3-way bodies,  $1\frac{3}{8} \times \frac{29}{32} \times 1\frac{1}{16}$  inches; double-pole and 4-way bodies,  $1\frac{1}{2} \times \frac{7}{8} \times 1\frac{1}{2}$  inches.

One No. 1499 key is furnished with each lock switch.

For special appliance application, 15-ampere switch can be furnished. Prices and complete information on request.

## Levolier Conduit Box and Fixture Switches Thin Model

6 Amperes, 125 Volts—3 Amperes, 250 Volts

No. 41

No. 39

No. 39 is the same as No. 41 with the addition of a link. This adapts it for use in any chain fixture—simply remove the top link immediately below canopy ring in the chain, and substitute No. 39 Switch. Eliminates the expense of rewiring.

Equipped with 7-foot cord, with bell at end, or plain lever control.

Standard finishes are brush brass, bronze and nickel. Other finishes supplied on special order.

No.	Each	STEM, INCHES		Carton	Std. Pkg.	Wt. Lb.

39	.85	Link Type		10	100	15

\*Plain lever without chain.

## McGill Levolver Three-Way Switches

3 Amperes, 125 Volts

No. 301

Equipped with lever for pull chain operation, and adapted for use wherever a three-way switch is to be used.

Permits the control of one or more lights from two remote points.

No.	Each	STEM, INCHES		Carton	Standard Package	Ship. Wt. Lb.
		Diameter	Length			
301	\$.90	$\frac{3}{16}$	$\frac{3}{16}$	10	100	13

## Levolier Canopy Pull Switches

10 Amperes, T Rating, 125 Volts—5 Amperes, 250 Volts

No. 1010

A single-pole switch designed for safe control of modern high watt and high intensity lamps.

No. 1039 is the same as No. 1010 with the addition of a link for fitting into chain fixture without rewiring.

Equipped with 7-foot cord, with bell at end, or plain lever control.

Standard finishes are brush brass, bronze and nickel.

No.	Each	STEM, INCHES		Carton	Std. Pkg.	Wt. Lb.
		Diameter	Length			
1010	\$1.30	$\frac{1}{2}$	$\frac{3}{8}$	10	50	10

## Levolier Multiple Circuit Switches

4 and 6 Amperes, 125 Volts

These switches carry a 6-ampere load, 125 volts, d.c. without undue arcing, pitting or heating. They are adaptable to a wide scope and variety of circuits, and can be furnished with standard plain lever, chain or cord pull control.

No. 400

No. 400 3-speed switch is designed particularly for ventilating fans and fractional hp. motors. Enclosed in fan housing—caps or casings are not necessary.

No. 265

No. 265 is a double pole, double throw switch with complete line cut-off. Load leads may be winding of a motor, in which case by interchanging the load leads it is possible to use the switch as a pole changer. Order of rotation: first pull, load 1; second pull, off; third pull, load 2; and fourth pull, off. Subsequent pulls repetition of order.

No.	Each	Control	STEM, INCHES Diameter Length	Carton	Std. Pkg.	Wt. Lb.

## Levolier Extension Arms

No. 85

No. 86

Constant pulling of lamp cords that rub against reflectors, shades and bowls can be eliminated by slipping an extension arm over each switch lever, inserting the cord through the end hole or loop, and knotting to hold. Arm is  $\frac{1}{2}$  inch thick, tubular formed for rigidity. Standard or special finished to match all Levolier switches.

No. 85-W can be extended to meet changing conditions for use with 18 or 22-inch and larger basin fixtures.

Nos. 86-L and 86 have two wire type extension arms which are designed to fit the lever on the No. 41-B plastic shell switch.

Packed 10 in a carton; standard package, 100.

## G-E Type CR1070 Switchettes

115/230 Volts, A.C.

Size No. 1, No. CR1070-C103 Spring-Return

Size No. 1, No. CR1070-C110 Maintaining Contact

Size No. 1, No. CR1070-C114 Quick-Disconnect

Size No. 1, No. CR1070-C122 With No. 6 Screw Terminals

Size No. 2, No. CR1070-A102

Available in many forms with special contact arrangement and design modification. Especially applicable where space is limited, and long life is desired. Used wherever a manually or mechanically operated switch is desired.

## Applications

As a float switch in automatic washing machines, the Switchette measures the height of the water, and regulates water flow. Selected for this application because of its small size and its ability to handle a 1/3-hp washing-machine motor.

As a contact mechanism in temperature pressure limits in domestic oil burners and stokers, to provide protection against overtemperature or overpressure. The use of a Switchette on this application resulted in a smaller complete device.

As a contact unit in juke boxes, and coin vending machines, it controls the mechanisms that turn records, or deliver the merchandise. Its wide variety of special contact arrangements makes this switch ideally suited to this application.

A cam-operated Switchette is used to time industrial processes and operation. The small size and easy mounting of this unit makes it very desirable.

In private aircraft, the Switchette is used to control radios, to limit the travel of the mechanism used to raise and lower landing wheels, to operate such safety devices as a flashing light to indicate to the pilot of the airplane that the landing gear has not been lowered, and to perform numerous other duties.

A manually operated Switchette is used as a trigger switch in automatic hand drills, since its small size permits an easy fit into the motor casting. Similar units also have been used in foot-operated switches for machine tools, and dash-board tools for road-grading equipment.

## Spencer Klixon Circuit Breakers

Capacity, 30 Volts, D.C.

Klixon Circuit Breakers provide positive electrical circuit protection from possible damage due to overloads and short circuits. They operate similarly to fuses but are permanent protective devices and have nothing that burns out.

Recommended for use in circuits or mobile equipment, boats, radio apparatus, home lighting plants, test and laboratory equipment, etc. Suitable for any equipment operating at 30 volts d.c. or less and as a secondary breaker on many 110 and 220-volt a.c. applications.

Light in weight, compact, easy to install. Unaffected by vibration, shock or motion.

Types CDLM, CDLA, CDM, and CDA have weatherproof case which keeps out dust, moisture, and prevents corrosion.

**Type C-6363**

Opens when the Circuit Becomes Dangerously Overloaded

Snap Switch to Close Circuit Turned On or Off Manually

**Type D-6364**

## H &amp; H Type NF Line Starting Switches

## Surface Type—For Small Motors

## Quick Make and Quick Break

No. 6808 2-Pole, Single-Phase, 2 Hp., 115-600 Volts;

30 Amperes, 250 Volts; 20 Amperes, 600 Volts

No. 7810 3-Pole, 3-Phase, 2 Hp., 110-600 Volts A.C.;

30 Amperes, 250 Volts; 20 Amperes, 600 Volts

Listed as Standard by Underwriters' Laboratories, Inc.

No. 6808

Gives positive control for motors and is especially suitable for oil burners, refrigerators, motor driven machinery, and lighting loads.

No fuses or overload protection are provided for.

Box is made of pressed metal.

This switch passed the stalled rotor test which is six times the normal full motor load.

Standard finish is cadmium.

No.	6808	7810
Each	\$1.90	4.80
Box Number	34	34
Weight	1½ pounds	1½

## Bull Dog Clamprmatic Vacu-Break Safety Switches

Arcing Chambers Attached to Overhead Brackets

Cut-Away View of Bakelite Arcing Chamber

Full Off Position

Full On Position

A clamp type pressure switch contact, with quick, easy operation. Exerts a wedging action when the moving contact engages the prongs of the stationary contacts. This wedging action puts great pressure on the contact surfaces while in the On position. When the handle is pushed to Off position, the clamping spring releases pressure first, and the stored energy thus released accelerates the breaking of circuit.

Rocker handle of the push type is directly connected to a bail on which the switch heads are mounted. Bakelite chambers confine arcs—prevent burning and pitting of contacts. Wiring room ample, yet compact.

## Type C Bull Dog Vacu-Break Safety Switches

Front Operated, 30 to 200 Amperes  
Side Operated, 400 and 600 Amperes  
Standard Line

Single Throw—Fusible—Non-Interlocking

Quick Make—Quick Break

The highly effective Vacu-Break arc control principle is incorporated in all Bull Dog Vacu-Break Safety Switches, regardless of price. As in other lines of switches, the Master (Type A) construction provides the maximum in service and safety. The Standard (Type C) construction is designed for those installations where an interlock is not required, as motor circuits and certain other industrial uses. The Junior (Type D) construction is intended for general purpose installations, such as service entrance and for motor circuits not exceeding 2 hp.

Cable terminals are Bull Dog solderless wire grips. Standard finish is black enamel.

\*Has swing-out interior for easier wiring.

‡60-ampere switch with 30-ampere fuse spacing and clips.

‡Double lugs. Standard single lugs furnished on order.

§Cast iron enclosure, including end plates.

## Square D General Purpose Single Throw Safety Switches

30-Ampere Switches: Not Quick Break or Quick Make—60-600 Ampere Switches: Quick Break Only

*Schedule A*  
All 30-60-ampere switches have aluminum finish. The 100-ampere and above have black enamel finish; raintight, aluminum finish. Blue label switches are rotor disc type, all others are blade type. The 3-wire switching neutral price is the same as for 3-pole switch, add SWN to 3-pole No.

### No. 13991 Square D Meter Test Block Cabinets

(Cabinet Marked "1" in Illustration Below)

Box is hinged at top and has tapped holes in back to mount "States" and "Eastern Specialty" (Type E-4) meter test blocks. These test blocks are used in combination with current transformers or with current and potential transformers for testing watt-hour meters.

Cabinet has 60 and 100-ampere standardized shutter openings at top. Furnished with blank shutters in place.

Height, 11 $\frac{1}{8}$  inches. Width, 12 $\frac{7}{8}$  inches. Depth, 4 $\frac{5}{8}$  inches.

Standard finish, aluminum.

No. 13991.....each \$7.00

### Square D Current Transformer Cabinets

(Cabinet Marked "2" in Illustration Above)

Standard finish, aluminum.

No. 13922 accommodates one or two transformers and has one-piece removable cover hinged at long side. Drilled for current transformer. Knockouts provided at side and top for line, load and meter wires.

No. SK2040 is similar to No. 13992, except has sealing stud with wing nut in place of spring latch.

No. SK2146 has removable cover and accommodates three transformers.

No. SK2256 accommodates one transformer.

No.	Each	Height Inches	Width Inches	Depth Inches

\*With side-operating handle.

†These enclosures furnished with standard conduit openings of sizes as shown—one in top, two in bottom, except 2-pole, 250 volts a.c. with one in top and one in bottom.

‡For 250-volt d.c. devices add D.C. to number.

‡Use Class I, Group D.

## Square D Industrial Circuit Breakers

Manually Operated—Quick Make—Quick Break  
Non-Interchangeable Trip Units

Type ML3 Breaker Unit, 225-Ampere Frame  
250 and 600 Volts A.C.; 125-250 and 250 Volts D.C.

Schedule D1

No. 78318

Has a solderless connector which offers ease of inserting heavy cable by swinging open the hinged top of the lug. It is only necessary to cut the cable to proper length, remove  $1\frac{1}{4}$  inches of insulation and lay the cable in the lug, swing the hinged top into position and tighten a set screw.

Trip ratings are 125 to 225 amperes.

Available in sheet steel dust-resisting enclosures with side operated handle for 3 and 4-wire solid neutral applications in addition to 2 and 3-pole devices. Also furnished in panelboards and switchboards.

## Square D Circuit Interrupters

Non-Automatic  
Type ML, 50 Ampere Frame  
Type ML2, 100 Ampere Frame  
Type ML3, 225 Ampere Frame

Schedule D1

Non-automatic circuit interrupters consist of essentially the same device as automatic circuit breakers with the exception of the tripping mechanisms. They are used on applications previously requiring non-fusible safety switches.

The non-automatic circuit interrupters are enclosed in the same types and sizes of sheet steel enclosures as are the automatic circuit breakers. Circuit interrupter listings are shown below.

The interrupting capacity of the non-automatic breaker is much higher than that of a comparable Type A unfused safety switch. Comparable standard automatic circuit breakers of 100 amperes or less, rated 250 volts or less, interrupt short circuit values of 5000 amperes. Breakers above 100 amperes, rated 250 volts, as well as all 600 volt a.c. breakers, are required by Underwriters to interrupt 10,000 amperes. Horsepower rated safety switches are only required to interrupt stalled rotor current of the motor they protect, 6 times full load current of motor. Due to the compactness of circuit interrupters, they find ready applications where space is limited.

## Heinemann Magnetic Circuit Breakers

120-240 A.C.

An outdoor type breaker which serves as main disconnect and over-current protection for the electrified farm. May be installed on the yard pole or on the farm building.

Meets both R.E.A. and Underwriters' requirements.

Magnetic trip with time delay gives high speed trip on short circuits, and delayed trip on harmless overloads. After the circuit breaker opens on overload or short circuit, it may be closed at once provided current has returned to normal. No resetting necessary, no confusing trip position—handle moves one way to "on" and the other way to "off." There is negligible wattage loss since nothing heats. Provision is made for locking the wiring compartment with meter seal or padlock. Solderless connectors are provided for all connections to circuit breakers and to neutral.

Housing made of 16 gage galvanized steel with baked on aluminum finish. Made by deep drawing and not as a folded box; this results in rounded corners with no sharp projections, as well as providing waterproof construction.

Overall height, 9 $\frac{1}{2}$  inches; height of housing, 8 $\frac{1}{2}$  inches; width of housing, 4 $\frac{1}{8}$  inches; depth of housing, 3 $\frac{1}{8}$  inches; hub size 1 $\frac{1}{4}$  inches.

## Type A Style A Trumbull Heavy Duty Switches

Single Throw

Quick Make and Break—Interlocking Cover  
General Purpose N.E.M.A. Type 1 Steel Enclosure

Schedule C—0-100 Amperes

Schedule ★C—200 Amperes and Over

Fusible

No Fuse

SN (Solid Neutral) Switches have a neutral strap between two poles. For example: No. 72221, a 2-pole switch, by the addition of this neutral strap becomes No. 72321SN, a 3-pole solid neutral switch. Exception: 3 and 4-pole solid neutral switches 800-ampere and above have regular 3 and 4-pole bases.

For switching neutral switches use the corresponding 3-pole switch and insert dummy fuse.

Solderless lugs standard.

Switches available for 1800 and 2400 amperes. Prices upon request.

Machine grey finish.

\*Twin lugs per pole.

*25311	3.50	3SN	2	2	125-250

For switching neutral use the corresponding 3-pole switch and insert dummy fuse.

SN (solid neutral) switches are furnished with insulated groundable neutral 30-100 inclusive. The 200 amperes and above have insulated neutral only with lug for grounding.

## Types KA and KAZ Sangamo Time Switches

Synchronous Motor—Silver Contacts

Type KA

Type KAZ

Six levers are provided for a maximum of three daily on and off operations. Accurate timing is obtained by turning the minute hand reset staff on 24-hour dial. Time-switch can be manually operated without affecting subsequent operations. Available in a wide variety of combinations providing two-circuit duplex and outdoor switches; also with Sunday and holiday omitting device, as well as advanced time cutoff. Type KAZ is furnished with astronomic dial.

Dimensions: 9 1/4 x 4 1/2 x 3 3/4 inches; four 3/4-inch pryouts in back, bottom, and both sides.

Shipping weight, 6 1/2 pounds.

Type	Each	120V. A.C.—Amps.	Each	240V. A.C.—Amps.	Poles	Throw
KA-11	\$25.00	35	\$25.00	35	Single	Single
KA-21	27.50	35	27.50	35	Double	Single
KA-31	31.00	6	31.00	6	Triple	Single
KA-12	27.50	35	27.50	35	Single	Double
KA-22	30.00	6	30.00	6	Double	Double
KA-32	33.00	6	33.00	6	Triple	Double

Specify voltage and frequency.

Form KAG, for reverse time limits between off and on, furnished at no extra charge.

Double Knobs, for Both Off and On.....add \$4.00

Form KAY, Two-Circuit.....add 6.00

Form KAH, Omitting Device.....add 2.00

Form KAHE, Advance Time Cutoff with Omitting Device.....add 7.00

Outdoor Case Without Window.....add 15.00

## Type VSW Sangamo Time-Switches

Synchronous Motor—With Carryover

Synchronous timing is combined with reserve spring clock operation during current interruptions up to 10 hours. This entirely automatic carryover eliminates the necessity of re-setting the dial after current interruptions, and insures accurate timing under all conditions. The omitting device is included.

Dimensions: 9 1/4 x 4 1/2 x 3 3/4 inches; 3/4-inch pryouts in back, bottom, and both sides.

Shipping weight, 6 1/2 pounds.

Type	Each	120V. A.C.—Amps.	Each	240V. A.C.—Amps.	Poles	Throw
VSW-11	\$42.00	35	\$42.00	35	Single	Single
VSW-21	44.50	35	44.50	35	Double	Single
VSW-31	48.00	6	48.00	6	Triple	Single
VSW-12	44.50	35	44.50	35	Single	Double
VSW-22	47.00	6	47.00	6	Double	Double
VSW-32	50.00	6	50.00	6	Triple	Double

Specify voltage and frequency.

Form VSWE, Advance Time Cutoff.....add \$5.00  
Also available in the same combinations as Type KA, including astronomic dial.

## Sangamo Astronomic Dials

For automatic control of outdoor advertising, flood-lights, air beacons, lighthouses, etc.

Turns lights on at sunset and off at sunrise. Also permit off operation at any time between 9:30 p.m. and 2:15 a.m. Special schedules are available.

For 30, 35, 40, 42 1/2 and 45 Latitudes.....each \$11.00

For 20, 27 1/2, 32 1/2, 37 1/2, 50, and 52 Latitudes.....each 13.50

When ordering, latitude must be specified.

## Series 300 Paragon Self-Lubricating Time Switches

### Telechron Motored

30 Amperes, 115 or 230 Volts, 60 Cycles, A.C.

Interior

Exterior

Accurate and durable for controlling signs, commercial lights, attic fans, stokers, oil burners, blowers, pumps, valves, motors, etc.

Telechron motored, has only two exposed gears, all other gears operate in a sealed, oil filled chamber.

Features sturdy clock train, snap action switch, and simple hand trip. Figure 2000 per cent more dial power than required.

Furnished in an attractive case.

Shipping weight, 5 pounds.

## No. PS-30 Paragon Poultry House Lighting Time Control Switches

110 Volts, 60 Cycles—A.C.

Schedule No. 1

Developed especially for poultry house lighting. Sturdy construction.

Time switch is modern, efficient, precision-built control instrument. Complete with heavy case and cover, and designed for wall mounting. Has knock-outs at back, sides, and bottom for ease of installation.

The procedure when morning and evening lights are used is to turn the lights on Bright in the morning and Off after sunrise. Then they are turned on again about one-half hour before sundown, and after a couple of hours the bright lights are turned off and the dim lights turned on. The dim lights are left on for 15 or 20 minutes and then turned off. This method

gets the birds up at the same hour and puts them to roost at the same hour each day. It has been found with this arrangement that all of the birds will go onto the roost within a very few minutes after the bright lights are turned off and the dim, or roosting lights are turned on.

Watts per pole: bright circuit, 3000; dim circuit, 1000.

Shipping weight, 4 pounds.

No. PS-30, Morning and Evening Lighting.....each **\$13.50**

No. PSN-30, Evening Lighting Only.....each **13.50**

No. 301, Morning Lighting Only.....each **11.75**

For 220 volts or 25 cycles add \$1.00. No extra charge for 50 cycles.

## G-E Automatic Time Switches and Timing Devices

### Telechron Motor Driven

G-E automatic time switches are operated by the well-known telechron synchronous motor, and do not require winding, regulating, or other attention.

While the types listed include a wide range of ratings and meet many requirements, switches of other ratings and types can be furnished.

The following table may be of assistance in selecting the proper type of switch for the desired operation.

For Uses Requiring	Use Type
Operation Related to Hour of Day (Outdoor and Indoor Installation).....	T-27
Repeating Operation Cycle, Not Related to Hour of Day (Indoor Installation).....	TSA-14
Process Timing and Control, Readily Adjusted Switch (Indoor Installation).....	TSA-10
Counting Units of Time (Machine Operating Time)	KT

### Type T-27 General-Purpose Timer

60 Cycles—230 Volts, A.C.—Contacts 35 Amperes

The Type T-27 time switch employs the well-known Telechron synchronous motor, and is equipped with removable and adjustable riders to provide for convenience of adjustment. Can be furnished with the skip-a-day omitting device at \$3.00 extra.

Switches are equipped with Type B-8, 2-watt motor. Can be furnished equipped with 6-watt motors for operation in temperature ranges of -20°F. to +110°F, at no increase in price. Dimensions, 7½x5½x4¼ inches.

Approximate shipping weight, 8 pounds.

Motor Volts	Switch Pole Throw	Plain Dial No.	Each	Astronomic Dial No.	Each
115	1 1	83X948	\$23.00	88X467	\$33.00
230	1 1	83X949	23.00	88X468	33.00
115	1 2	83X950	26.00	88X469	36.00
230	1 2	83X951	26.00	88X470	36.00
115	2 1	83X952	26.00	88X471	36.00
230	2 1	83X953	26.00	88X472	36.00
115	2 2	88X443	29.00	88X473	39.00
230	2 2	88X444	29.00	88X474	39.00

Same prices for 50 and 25-cycle ratings.

### Type TSC-6 Coin-Operated Time Switch

The TSC-6 coin-operated time switch dispenses the services of appliances. Automatically, this time switch collects and banks a coin, and in return, permits the use of an appliance for a predetermined number of minutes.

Approximate dimensions, 4¼x6x4 inches.

Approximate shipping weight, 7 pounds.

Volts	Cycles	Contact Hp.	Coin	Time Interval Minutes	No.	Each
115	60	¼	Dime	30	75X850	\$17.25
115	50	¼	Dime	30	75X849	17.25
115	25	¼	Dime	30	75X848	17.25

## G-E Automatic Time Switches and Timing Devices

### Telechron Motor Driven

#### Type TSA-14 for Control of Repeating Schedules

60 Cycles—Contact Rated 10 Amperes, A.C.

Type TSA-14 is designed to control repeating cycles of operation of electric circuits without respect to the time of day. The "on" time may be varied between 1 and 99 per cent of the total time cycle.

Die-cast base is equipped with a pipe nipple that is suitable for mounting in a knockout of any convenient junction box or switch box.

Timing is obtained by a Telechron synchronous motor, therefore no winding or regulating is required.

Dimensions, 5-inch diameter by 3 1/8-inch depth.

Approximate shipping weight, 4 pounds.

Total Cycle: 10 or 15 Seconds			Total Cycle: 5, 7, 10, or 15 Minutes		
Conduit Mounting Nipple	Volts	Each	Conduit Mounting Nipple	Volts	Each
Top	115	\$22.50	Top	115	\$18.00
Bottom	115	22.50	Bottom	115	18.00
Top	230	22.50	Top	230	18.00
Bottom	230	22.50	Bottom	230	18.00
Total Cycle: 20, 30, or 40 Seconds; 1 or 3 Minutes			Total Cycle: 30, 45, or 60 Minutes		
Top	115	\$20.00	Top	115	\$16.50
Bottom	115	20.00	Bottom	115	16.50
Top	230	20.00	Top	230	16.50
Bottom	230	20.00	Bottom	230	16.50

When ordering specify total ("on" plus "off") time cycle.  
Same prices for 50 or 25-cycle ratings.

#### Type TSA-10 for Process Timing

60 Cycles

Type TSA-10 process timer is suitable for the control of electrically operated machines, devices, etc., and is readily adjusted over a wide range of operating cycles. Can be supplied with normally open or normally closed contacts. Resetting is automatic when the clutch coil is de-energized.

Because of its flexibility of adjustment and connection, and since its operations can be controlled electrically, this timer is

adaptable to many control applications.

Relays for use with the Type TSA-10 timer, enabling completely automatic control, can also be furnished.

Dimensions, 9x6x4 inches.

Approximate shipping weight, 8 pounds.

Double-Time Scale—1/5, 1/3, 2/3, 1, 2, 3, 4, 5, 6, 10, 15, 20, 30, 40, 60, 120, 180, 240, 300, 360 Seconds;  
1/5, 1/3, 2/3, 1, 2, 3, 4, 5, 6, 10, 15, 20, 30, 40 Minutes; 1/5 or 1/6 Hours

Volts	Contacts	Time-Set Knob	Each
115	With	Internal	\$43.25
230	With	Internal	43.75
115	Without	Internal	43.00
230	Without	Internal	43.50
115	With	External	46.00
230	With	External	46.50
115	Without	External	45.75
230	Without	External	46.25
Single-Time Scale—5, 10, 15, 20, 30, 40 Seconds; 1, 2, 3, 5, 6, 10, 15, 20, 30, 40 Minutes; 1, 2, 3, 4, or 6 Hours			
115	With	Internal	\$37.50
230	With	Internal	38.00
115	Without	Internal	37.25
230	Without	Internal	37.75
115	With	External	40.25
230	With	External	40.75
115	Without	External	40.00
230	Without	External	40.50

When ordering specify scale rating and normally open or normally closed main contacts.

Same prices for 50 or 25-cycle ratings.

## G-E Automatic Time Switches and Timing Devices

### Telechron Motor Driven

#### Type KT Automatic Time Meters

60 Cycles

Round for Flush Mounting

Square for Flush Mounting

Conduit

Portable

Whenever knowledge of elapsed time is of value, the Type KT time meter is a profitable investment. Machine-operating time, often very difficult and expensive to measure, is easily and inexpensively measured with this device.

This time meter consists of a cyclometer, driven by a Telechron synchronous motor. Connected to an electric circuit, it will measure and indicate the number of hours, tenths of hours, or minutes that the circuit is in use.

Approximate shipping weight, 6 pounds.

#### Round

Approximate dimensions, 3 1/2 inches in diameter.

Volts	REGISTERS			Each
	Hours No.	1/10 Hours No.	Minutes No.

## Mercoïd Mercury Switches

Type 9-51R

Type 9-61R

Type 9-81

Mercoïd Hermetically Sealed Mercury Switch is used for making and breaking an electrical circuit. Not subject to open arcing, pitting or sticking of contacts. Cannot be affected by dust, dirt or corrosion. Long lived dependable service. Positive operation is assured under various operating conditions.

Many types available to meet different requirements.

Types 9-51R or 9-51S, 10 Amp. 115 V., 5 Amp. 230 V.....	each	\$2.60
Types 9-61R or 9-61S, 4 Amp. 115 V., 2 Amp. 230 V....	ea.	1.50
Type 9-81, 9/10 Amp. 24 V.....	each	3.80
Type PP-93-11 Magnet for Type 9-81 Switch.....	each	1.00

## Mercoïd Sensatherms

9/10 Ampere, 24 Volts or Less

Extremely sensitive and accurate in performance. Follows room temperature changes so quickly that uniform control is assured.

Operates on temperature variation of  $\frac{1}{2}^{\circ}$  above or below point set (total differential  $1^{\circ}\text{F}.$ ) No internal heater coils or other means of artificial acceleration are used.

Champagne tone finish.

Type H, for Heating Applications 55-85°F.....	each	\$8.00
Type R, for Air Conditioning and Cooling, 55-85°F. and 65-95°F.....	each	8.00

## Mercoïd Transformer-Relays

For A.C. Current

For use with stokers, oil burners, air conditioning and industrial applications.

Transformer is self-contained in the relay, as the primary coil induces 24 volts in the secondary coil by transformer action. Quiet and dependable mercury contact instrument with low voltage thermostat or pilot circuit. No metal contacting faces to hum or chatter.

Single pole circuit, normally open (load circuit common with supply circuit). Electrical capacity, 10 amperes, 115 volts; 5 amperes, 230 volts. Motor rating, 1 hp. repulsion-induction;  $\frac{1}{2}$  hp. split-phase. Remote control circuit, 24-volt, self induced.

Type....	V2-3A	V2-3B	V2-3D	V2-3F	V2-3G	V2-3J
Each....	\$12.00	13.00	13.00	12.50	13.00	13.00
Volts....	115	115	115	230	230	230
Cycles...	60	50	25	60	50	25

## For Heater Loads

Types V2-26A and V2-26F especially designed to handle heavy non-inductive heater loads. Non-inductive a.c. heater load rating: Type V2-26A, 20 amperes, 115 volts, maximum 2000 watt; Type V2-26F, 20 amperes, 230 volts, maximum 4000 watt.

Type.....	V2-26A	V2-26F
Each.....	\$13.00	13.00
Volts.....	115	230
Cycles.....	60	60

Other types also available in many different circuit arrangements and capacities.

## Type K10-1 Mercoïd Lever Valves

Designed for controlling light and heavy oils, water, air, steam, gas and ammonia.

The lever-action develops six times the power of usual solenoid, making possible operation at very high pressures for corresponding port sizes.

Quiet in operation, two-wire, of packless construction and closes upon current failure.

Normally closed type; opens when energized.

Pipe size,  $\frac{3}{8}$  and  $\frac{1}{2}$  inch;  $\frac{3}{8}$ -inch is standard.

Standard port sizes,  $\frac{1}{8}$ ,  $\frac{1}{4}$ , and  $\frac{1}{2}$  inch.

Type K10-1, $\frac{3}{8}$ -Inch Pipe Size.....	each	\$13.40
Type K10-1, $\frac{1}{2}$ -Inch Pipe Size.....	each	14.40

Other solenoid and hydrometer valves upon application.

## Type DA-31 Mercoïd Pressure Controls

Has independent outside adjustments for setting both cut-in and cut-out pressures. Indicators show exact pressures for which instrument is set to operate.

Furnished with adjustment locking device and iron pig-tail siphon.

Electrical capacity, 10 amperes, 115 volts; 5 amperes, 230 volts and on order 3 amperes, 440 volts, a.c. or d.c. Motor rating 1-hp. repulsion-induction,  $\frac{1}{2}$ -hp. split phase or d.c.

Range No.	Each	Adjustable Operating Range Pounds	DIFFERENTIALS, POUNDS		Maximum Pressure Pounds
			Min.	Max.	
1	\$12.00	0 to 14	1	14	30
2	15.00	0 to 30-In. Vac.	2-In. Vac.	30-In. Vac.	...
3	12.50	10-In. Vac. to 12	1	Entire Range	30
4	13.50	0 to 35	$1\frac{3}{4}$	35	50
5	13.50	0 to 60	$2\frac{1}{2}$	60	80
6	13.50	0 to 100	$3\frac{3}{4}$	100	125
7	15.00	0 to 150	6	150	200
8	15.50	0 to 200	6	200	240
9	16.00	0 to 300	12	300	400

Mounting bracket with 12 feet copper tubing, \$4.20 extra.

## Type DA-21 Mercoïd Pressure Controls

Similar to Type DA-31 except that it has a heavier gage bourdon tube with a check valve to dampen out pulsations.

Adjustments, electrical capacity same as Type DA-31.

Range No.	Each	Adjustable Operating Range Pounds	Bourdon Tubing	DIFFERENTIALS, POUNDS		Maximum Pressure Pounds
				Min.	Max.	
1	\$12.50	0 to 14	Brass	1	14	30
4	14.00	0 to 35	Brass	$2\frac{1}{2}$	35	80
5	14.00	0 to 60	Brass	3	60	125
5S	20.00	0 to 60	Steel	6	60	150
6	15.00	0 to 100	Brass	6	100	200

Types DA-31 and DA-21 can be furnished in explosion-proof housing. Closer differential controls on application.

## Type DA-121 Mercoïd Combination Pressure and Low Water Controls

For low pressure steam.

Dial has two adjustable pointers which show pressures at which instrument is set to operate. Range is set by turning outside adjustments.

Electrical capacity, 10 amperes 115 volts, 5 amperes 230 volts; and on special order 3 amperes 440 volts, a.c. or d.c. Motor rating, 1-hp. repulsion-induction,  $\frac{1}{2}$ -hp. split phase, or d.c.

Range No.	Each	Adjustable Operating Range, Lb.	DIFFERENTIALS POUNDS		Max. Press. Lb.
			Min.	Max.	
1	\$28.00	0 to 14-Lb.	1	14	30
3	29.00	10-In. Vac. to 12-Lb.	1	Entire Range	30

Other types liquid level controls on application.

## Type DA-36 Mercoild Immersion Hot Water Controls

Used as hot water storage tank or boiler water temperature control; also as a limit control.

Has double outside adjustments, accurately calibrated visible dial and close operating differential.

Differential 2° minimum, 100° maximum. Rating, 10 amperes 115 volts, 5 amperes 230 volts. Motor rating, 1-hp., R.I. ½-hp. s.p. or d.c. Bulb, 3 inches long with ½-inch I.P.T. connection.

Type DA-36 has straight stem.

If back angle stem is desired, specify Type DA-37.

Range No.		Adjustable Operating Range	MIN. DIFFERENTIALS		Max. Temp. Must Not Exceed
	Each		High	Low	
5	\$15.00	100-200°	2°	9°	220°
6	15.00	135-235°	3°	10°	260°

## Type DA-35 Mercoild Temperature Controls

For control of liquids or gases not injurious to copper or brass, such as air, oil, water, paraffin, glue or distillate vapors.

Has double outside adjustment, accurately calibrated visible dial. Furnished standard with 6 feet flexible tubing.

Electric capacity, 10 amperes 115 volts, 5 amperes 230 volts. Motor rating, 1-hp., R.I. ½-hp. s.p. or d.c.

Range No.	Each	Adjustable Operating Range	MIN. DIFFERENTIALS	Low
			High	
3	\$22.00	25-100°	1°	5°
4	22.00	50-150°	2°	12°
5	19.00	100-200°	2°	9°

Other ranges available.

## Type 115-W Mercoild Immersatherms

A summer-winter hot water supply control.

Has many industrial applications for controlling temperatures of liquids or gases not injurious to copper.

Low voltage, 9/10 amperes, 24 volts.

Type 115-W, Range 50-250°F.....	each	\$9.00
Type 115-W, Range 170-430°F.....	each	15.00

## Mercoild Clamp-On Type Risertherms

A temperature limiting control designed to be clamped on risers of hot water heating systems or the surfaces of hot water tanks.

Electrical capacity either a.c. or d.c., 10 amperes, 115 volts, 5 amperes, 230 volts, and on special order at extra charge of \$3.60, 3 amperes, 440 volts. Motor is 1-hp. repulsion-induction, ½-hp. split phase, or d.c.

### No. 34

For use in connection with thermostat for dual control of unit heaters. Standard range 140 to 230°F., differential 6 to 25°F.

No. 34, 10-Ampere, Single Pole.....	each	\$10.00
-------------------------------------	------	---------

### No. 35

A limit control for hot water systems. Standard range 110 to 200°F., differential 6 to 25°F.

No. 35, 10-Ampere, Single Pole.....	each	\$10.00
-------------------------------------	------	---------

## Type 75 Mercoild Boiler Feed Water Pump Controls

300 Pounds Pressure Rating

Especially designed for regulation of motor-driven feed water pumps on boilers where pressures do not exceed 300 pounds. Operates feed water pump on approximately ¾-inch variation in water level.

Boilers used for generation of steam for industrial applications require constant replacement of water to make up for evaporation

losses. As such boilers generally operate on high pressures, motor-driven feed water pumps are required. Close regulation of the water level is desirable to prevent lowering of steam pressure due to admission of too great a quantity of water.

Equipped with hermetically sealed mercury contact switch.

No. 2120. Feed water pump control only. Single pole, 10 amperes.

No. 2122. Feed water pump control with alarm circuit. As water level drops 10 amperes pump circuit closes first. If water level continues to drop 4 amperes alarm circuit closes.

No. 2123. Feed water pump control and low water cut-out. As water level drops 10 amperes pump circuit closes first. If water level continues to drop 10 amperes, circuit controlling heating equipment opens.

Pipe connections, 1-inch I.P.S.

Electrical capacity: 10 amperes 115 volts, 5 amperes 230 volts, a.c. or d.c. Alarm circuit, 4 amperes 115 volts, 2 amperes 230 volts.

Motor rating: 1-hp. repulsion-induction, ½-hp. split phase or d.c.

Approximate shipping weight, 35 pounds.

No. ....	2120	2122	2123
Each .....	\$40.00	43.00	44.00

Available for 3 amp. 440 volts at \$3.60 additional.

If desired for maximum pressures of 150 pounds, deduct \$5.00 from price.

## Mercoild Pyrattherms

Type JM1 is a safety and ignition control for oil burners employing intermittent spark or gas ignition. Full protection against flame or ignition failure. Positive ignition control closes ignition circuit before every starting operation of burner.

Type JM for constant ignition burners.

Electric capacity, 10 amperes, 115 volts, 5 amperes 230 volts, a.c. only, 60 cycles.

Type JM1.....	each	\$26.00
Type JM.....	each	24.00

## Mercoild Controls

### Lever Arm Type

To open and close circuits

No. 46 Snap Action..ea. \$8.50

No. 47 Direct Action ea. 7.00

No. 48 3-Position..ea. 10.00

### Float Type

To maintain fluid levels in tanks or control sump pumps or cellar drainers.

No. 40 Counter-Balance.....ea. \$20.00

No. 41 Plunger...ea. 20.00

If rod or floats are not desired, deduct \$5.50.

No. 41

No. 40

## No. 855 Mercoild Thermostats

For high voltage applications, to handle motor load directly without use of relay.

Standard ranges: 56-80°, 38-70°, 65-90° and 25-60°.

Shipping weight, 2 pounds.

No. 855, without Thermometer..each \$12.00

No. 855T, with Thermometer...each 13.00

Special ranges available at additional cost.

Buss One-Time Fuses

Non-Renewable—250 to 600 Volts

Buss One-Time Fuses are guaranteed, with good contact, to operate perfectly at any overload without charring or burning the fuse case.

Buss One-Time Cartridge Fuses are listed as standard by the Underwriters' Laboratories.

Except for instrument protection. Fusetrons should be used instead of fuses, as they give true and complete protection while their remarkable time-lag prevents useless blows from starting currents, etc.

Buss Super-Lag Renewable Fuses and Renewal Links

Code (Paragraph 4346) in many cases permits smaller sized fused safety switches, fuse panels or fuse blocks if Buss Super-Lag fuse is used. One-piece link has long time lag that reduces number of blows on starting currents or other harmless overloads.

Sizes from 1 to 600 not listed, in any quantity, take larger quantity price on next larger amperage, plus a set-up charge of \$2.50 on each size or type on each shipment. Fuses and links of the same size and type in the same shipment take only one set-up charge for such size.

## Jefferson Super-Lag Renewable Enclosed Fuses

Care should be taken to insure clean contact surfaces between the copper blades, renewals and washers. The nut should always be drawn up tight.

## Jefferson Union Renewable Enclosed Fuses

250 and 600 Volts

Listed As Standard by Underwriters' Laboratories

### Ferrule Type

3 to 60 Amperes

The ferrule type fuse is quick and easy to renew. No loose washers, both ends open for inspection and cleaning, and the link bent at one end which automatically adjusts it to the proper length.

Only three simple parts.

Amperes	Carton	250 Volts			600 Volts

### Knife Blade Type

70 to 600 Amperes

Jefferson Union Renewable Fuses are assembled in casings of extreme durability, from which all trace of volatilized link metal can be quickly removed and in which all threads are protected from molten metal. The renewability of such a fuse will continue after any number of blows.

In addition to these important advantages Jefferson Union Renewable Fuses can be renewed with exceptional speed. They are made in all standard ratings.

\*The National Electrical Code does not cover any type of 250-volt enclosed fuse above 600 amperes. Fuses of higher capacity are not listed as Standard by the Underwriters' Laboratories but are built to the same strict standards as those so listed.

### Economy Delay Renewable Cartridge Fuses 250 and 600 Volts

Listed by Underwriters' Laboratories, Inc.

Always operate at rated capacities.  
May be used successfully under all conditions of service without filling material of any description.

The delay renewal link is quickly and easily replaced and the restoration of a blown fuse to its original efficiency takes only a few moments.

## Ideal Safe-T-Grip Fuse Pullers

Eliminates danger of pulling and replacing cartridge fuses by hand and bending of fuse clips through improper removal. Also adjusts loose cutout clips, handles laboratory test tubes, live electrical parts, etc. Laminated fiber construction. Possesses high di-electric qualities. Withstands exceptional atmospheric conditions of heat and humidity.

## No. 34-001 Midget Size

For handling small fuses, grid leaks, etc., 1/4 to 1/2 inch in diameter. Has 3 laminations, 5 inches long.  
No. 34-001, Weight, 1 Ounce.....each \$ .35

## No. 34-002 Pocket Size

A popular size for general use. For fuses 0 to 200 amperes 250 volts and 1 to 100 amperes, 600 volts. Has 5 laminations 7 1/2 inches long.  
No. 34-002, Weight, 3 Ounces.....each \$1.00

## No. 34-003 Giant Size

For fuses 100 to 600 amperes, 250 volts and 60 to 400 amperes, 600 volts. Has 7 laminations, 12 inches long.  
No. 34-003, Weight, 8 Ounces.....each \$3.00

## No. 34-004 Jumbo Size

A large powerful tool for handling fuses 200 to 800 amperes, 250 volts and 200 to 600 amperes, 600 volts. Has 9 laminations, 20 inches long.  
No. 34-004, Weight, 24 Ounces.....each \$9.00

Eco Non-Indicating Non-Renewable Enclosed Fuses  
250 and 600 Volts

Listed by Underwriters' Laboratories, Inc.

Made of heavy tubing. Caps are all brass, permanently rolled on the tube, not merely crimped. Caps on ferrule type fuses are pierced without distorting out-of-round, and the piercing not only permanently prevents relative movement, but it also provides full clip contact and a means for venting.

Heavy copper lead-in terminals are used and thereby provide accurate and dependable rating and performance. Unexcelled for uniformity of current-time operation.

## No. 34-005 Ideal Combination Test-Lites and Fuse Pullers

For testing, removing, or inserting fuses from 30 to 100 amperes capacity, testing circuits of from 110 to 550 volts, handling all types of live electrical parts, adjusting loose cut-out clips, etc.

Made of reinforced bakelite. Similar in design to a pair of pliers. Test pins are mounted in handle ends and are adjusted to various spans by opening or closing the handles. Test-lite is enclosed in handle to safeguard against breakage.

Length overall, 7 inches. Weight, 6 ounces.

No. 34-005.....each	\$3.24
No. 34-006, 18-Inch Flexible Leads.....each	.65

## 15 to 30-Ampere Buss Fusetrans

For Circuit Protection on Voltages up to 125

Stops needless blowing of plug fuses. Will not blow when motors start on washing machines, refrigerators and such appliances. Has a long time-lag, because it is a fuse to which a thermal cutout has been added.

Abolishes unsafe practice of using over-size fuse to prevent needless blowing. Gives all the protection a fuse does, holds like a large fuse when safety permits, yet opens like a small fuse when safety demands.

Large clear window facilitates locating of blown Fusetrans. No installation cost; fits regular fuse receptacle. Packed 4 in a box, 100 in a shelf package.

No.	T15	T20	T25	T30
Each	\$.10	.10	.10	.10
Amperes	15	20	25	30

## 15 to 30-Ampere Buss Fustats

Type S Fuses

For Circuit Protection on Voltages up to 125

Permits addition of more appliances to present circuits. Will not blow out when motors start on washing machines, refrigerators, or other appliances. Fits all Edison base fuse holders by use of adapter which locks in place.

Fustat

Adapter

Has a thermal cutout combined with a fuse. Operates like a Fusetrans, but has a non-tamperable base. Resists over-fusing. A 20, 25, or 30-ampere size will not fit in a 15-ampere receptacle or adapter. Similar limitations apply to all other sizes.

Adapters not included with Fustats; order separately and specify size.

Packed 4 in a box; 100 in a shelf package.

Amperes	Fustats		No.	Adapters	
	No.	Each		No.	Each
15	S15	\$.10	SA15	\$.07 1/2	
20	S20	.10	SA20	.07 1/2	
25	S25	.10	SA30	.07 1/2	
30	S30	.10	SA30	.07 1/2	

## 0 to 14-Ampere Buss Fustats

For Motor Apparatus, or Circuit Protection on Voltages up to 125

A fuse to which is added a thermal cutout. Has non-tamperable base to prevent anyone destroying protection. Fits all standard Edison base fuse holders by use of adapter which locks in place.

Fustat

Adapter

Holds starting current and harmless overloads, yet protects motor against burnout from any excessive current, even light overloads if continued. Opens like a fuse on short-circuit.

Instead of fuse, install in the same block or switch, a Fustat having the same, or slightly higher, ampere rating as the motor. It will protect motor against burnout.

Adapters not included with Fustat; order separately, and specify size Fustat for which they are intended.

Packed 4 in a box; 100 in a shelf package.

Amperes	Fustats		No.	Adapter	
	No.	Each		No.	Each
1.	S 1	\$.20	SA 1	\$.07 1/2

12.	S12	.20	SA15	.07 1/2	
14.	S14	.20	SA15	.07 1/2	

Many other sizes from 3/10 to 9 amperes can be obtained.

Buss Fusetrans  
250 and 600 Volts

1 to 60 Amp.

70 to 600 Amp.

Fits ordinary fuse holders. A fuse and a thermal cutout. Has long time-lag and less electrical resistance.

For all types of circuits or feeders. Long time-lag prevents blowing on starting currents or other harmless overloads, yet they protect against short-circuit with speed of a fuse.

Low resistance lets switches and panelboards operate at a lower temperature. This prevents damage and wipes out needless blowing of fuses. In cases of heating from poor contact or other causes the thermal cutout in the Fusetrans will open to protect panelboard or switch against damage.

On normal installations size about 100 to 125 per cent of ampere rating of motor, installed in disconnect switch or branch circuit panel gives safe and dependable motor-running protection. Motors protected by other thermal devices get double protection. If other devices fail Fusetrans will open to protect against dangerous overload or single phasing. Because Fusetrans can be used in smaller sizes than ordinary fuses, savings on original installations can be made through use of smaller size switches and panelboards.

Carries Underwriters' Laboratories label and is approved for both motor-running and circuit protection.

Other standard dimension Fusetrans are available from 1/10 to 9 amp. and midget dimensions from 1/10 to 10 amp.

Return 35 to 60 Ampere Blown Fusetrans and Get Replacements at One-Half Price

Note on the order the items of blown Fusetrans being returned. If such Fusetrans are in good condition, except for being blown, the replacement Fusetrans, up to an amount equal in list value to those returned, will be billed at one-half price.

This applies only to 35 ampere and larger size.

## Buss Glass Tube Fuses

For Auto, Radio, and Instrument Protection

Packed 5 in a slide cover metal box.

Type AGC fuses 3 amperes and smaller can be used on 250-volt circuits.

## Buss Fuse Holders

Used for mounting fuses on radios, instruments, electronic equipment, automobiles, or any equipment where ease of changing fuses is particularly desirable. Removable knob of holder changes fuse quickly and simply.

Good contact on fuse caps is assured by strong coil spring pressure.

Protects fuse from dirt and fumes.

Inserted through holes on panel. HJM, HKP, and HCM can be used on panels up to  $\frac{3}{16}$ -inch thick. They are held in place by locking nut on holder.

HPC is attached to panel by screws or rivets through flange on holder, and can be used on panels of any thickness.

Type	Each	For Currents Amperes	For Fuse or Fusetron Inches	Shipping Wt. Lb. per 100
HJM	\$.50	15	$\frac{1}{4} \times 1$	4
HKP	.50	15	$\frac{1}{4} \times 1\frac{1}{4}$	4
HCM	.75	18	$\frac{1}{4} \times 1\frac{1}{4}$ and $\frac{3}{32} \times 1\frac{1}{4}$	5
HPC	1.50	22	$1\frac{1}{32} \times 1\frac{1}{2}$	7

## Buss Special Fuses

Special fuses for every purpose can be furnished.

Submit a sample of the fuse needed if possible, otherwise submit full details as to type, voltage, amperage, etc.

Care must be exercised in ordering fuses as they are made to order and are not returnable.

## Buss Aircraft Fuses

A complete line of Buss aircraft fuses is available.

For detailed information, write for Buss Bulletin AF.

## Buss Fuse Wire and Strip

Buss fuse wire and strips will carry indefinitely current shown under heading capacity and will open the circuit when subjected to current 25 per cent in excess thereof.

This is based on a distance between contacts or terminals of 2 inches.

When used on contacts of other distances, the carrying capacity is affected as shown in table below.

Will Carry More Current			Will Carry Less Current		
Distance Between Contacts Inches	Per Cent Additional		Distance Between Contacts Inches	Per Cent Less	
$\frac{1}{2}$	100		$2\frac{1}{2}$	5	
$\frac{3}{4}$	70		3	10	
1	45		4	15	
$1\frac{1}{4}$	30		5	20	
$1\frac{1}{2}$	15		6	25	

The size of terminal and other local conditions will greatly affect these figures. They are only approximate.

## Fuse Wire

The  $\frac{1}{4}$ -ampere size is furnished on 250-foot spools; sizes  $\frac{1}{2}$  to 3 amperes, on  $\frac{1}{2}$ -pound spools; and 5 to 100-amperes, on 1-pound spools.

Furnished only in full spools.

## Buss Open Link Fuses

Buss open link fuses can be obtained with many other styles of terminals and in larger capacities. When in need of any open link fuses not listed, send sample or complete description.

Unless otherwise specified, standard terminals as listed will be furnished. The terminals listed under heading of Other Terminal, can be obtained if desired without additional cost. Slots are slightly larger than dimensions given so that bolts of such sizes will fit the slot. Terminals are all copper.

Amperes	*Each	STANDARD TERMINAL		Old No.	Other Terminal
		Type	Slot In. / Width Inches		
1 to 30	\$.04	OD	5/32 3/8	1	OH
35 to 60	.05	OH	3/16 9/16	3	OJ
65 to 100	.08	OJ	1/4 1 1/16	5	OL
110 to 200	.13	OL	3/8 3 3/4	7	OS
225 to 400	.22	OS	7/16 1 1/2	16	ON
450 to 600	.40	ON	1 1/2 1 3/8	10	OS
650 to 1000	.80	OW	5/8 2 1/16	28	ON

When ordering, be sure to specify exact amperage and length desired. By length is meant the center to center dimension of the slots in the terminals. This dimension will be designated by one of the symbols shown below, this symbol immediately following the terminal symbol.

Symbol..... A C D F H J L N R S U X Y Z  
Size.....in. 1 1 1/4 1 1/2 1 3/4 2 2 1/2 3 3 1/2 4 5 6 7 8

\*A set up charge of \$1.50 is made for each size and type fuse ordered on each shipment, in addition to prices shown.

## Large Open Link Fuses

Terminals of cold rolled copper, entirely flat, one edge being slotted to receive the fuse strip.

When ordering specify: ampere range desired; width, length, and thickness of terminals; size of hole desired, center to center dimension of terminal hole. If more than one hole in each terminal is desired, a sketch of the fuse must be submitted in addition to the information above.

## Stamped Open Link Fuses

Types WGA and WHA usually made of copper. All other types are made of zinc.

A set up charge of \$1.50 is made for each size and type fuse ordered on each shipment, in addition to prices shown.

Type	Each	Set-up	Old No.	Center to Center Inches	Max. Width of Terminal Slot Inches	Portion Inches	Usual Amperages
WAA	\$.02	\$1.50	A	1 1/4	3/16	3/8	...

## Buss Clear Window Plug Fuses

Carries Underwriters' Laboratories inspected label.

Buss fuses have an extra large, clear window and an all white background which makes it easy to see if fuse is blown. Brass cap protects fuse against any chipping of the top. Insulated with porcelain and mica.

Packed 5 in a box. Information printed on box tells what to do when a fuse blows.

Standard package, 100. Weight per 1000, 65 pounds.

No.	AMPERES

## Jefferson Plug Fuses

Jefferson Gem Plug Fuses are equipped with clear mica windows making it possible to see at a glance whether or not fuse is blown.

These fuses are listed as standard and bear the Underwriters' label. Packed in display cartons of 5 each and shelf packages of 100 fuses (20 cartons of 5 each).

Carton of 5 Fuses

## Clearsite Non-Renewable Plug Fuses

The fuse link is mounted under the fuse window thereby giving clear vision of the link. The drop-out type of link is used which lessens the internal operating pressure.

The fuse body is made of heat-resisting molded insulation, black in color.

Regular package consists of 50 plugs to a carton. Retail package consists of 5 plugs to a package, 100 plugs to a carton.

## Ideal Fuse Clip Clamps

Ferrule Type

Cut-Open View

Knife Type

These fuse clip clamps grip all makes of clips.

The knurled grip knob completely insulates the metal parts. The heavy steel clamping ring brings pressure directly around outside of jaws adjacent to ends of clip. This clamping ring rides on a steel washer, reducing friction of turning knob. The steel jaws are strongly reinforced, and the spring holds the jaws in open position.

All metal parts are cadmium plated.

Ferrule Type					
No.	Size	Each	Amperes	Volts	Std. Ctn.

## Ideal Fuse Reducers

Ferrule Type

Ideal Fuse Reducers protect over fused circuits without the expense of a change in switch, panel or switchboard equipment. Fully approved by Underwriters' Laboratories. These reducers can be supplied for both ferrule and knife type standard N. E. C. cartridge fuse holders.

Special reducers are also available for reducing from 600 volts to 250 volts. If a circuit is being changed from 600 volts to 250 volts by means of special adaptors, the same switches, panel boards, cutouts, etc. can be used.

250 or 600	400 to 200	55	2642	2.60

200 to 100 Amp.

## Buss Clip-Clamps

These clip-clamps are built for hard service, and insure good contact between clips and fuses or Fusetrons. They make replacement of fuse-clips unnecessary; generally permit even injured clips to be used.

To prevent corrosion, all steel parts are heavily cadmium plated.

No.	Each	Size of Clamp	Carton Quantity	Wt. Lb. per 100
1	\$ .40	0-30 Amp. 250 Volt	12	5

Front connection fuse terminals are furnished with short screws, requiring head to be countersunk.

Back connection fuse terminals are furnished with studs long enough for 2-inch slate or marble mounting.

NOTE.—Plain finish will be sent unless otherwise specified.

## Type A Columbia Surface Steel Cabinets

Adapted to nearly all installations where a cabinet for surface mounting is to be used as a junction, service, switch, panel, or cut-out cabinet.

**Construction.** Of sheet steel, required thickness to conform with Underwriters'.

**Finish.** Standard finish is high grade baked-on black Japan. Olive green, aluminum, white enamel, or other special finishes at extra charge.

**Hardware.** Cabinets up to 18 inches in width or height are regularly equipped with flush ring handle and friction catch; over 18 inches wide and not exceeding 24 inches high a turn knob and latch is used. Larger cabinets and all double door cabinets are fitted with vault handle latch. Unless otherwise specified, all boxes are hinged on the long side. Code requirements for double and three-point catches

are provided for in the listing.

**Knockouts.** All sizes, including 12x10 inches have one 3/4-inch knockout in center of each side and balance 1/2-inch knockouts; sizes 12x12 inches and up, one 1 1/4 and one 1-inch knockouts located near center of each side with remaining space filled with 1/2-inch knockouts.

**Galvanized Cabinets** can be furnished at 30% extra charge.

**Boxes without Covers** can be furnished at a deduction of 20% in list prices.

Flange can be supplied on front edges for mounting a wood trim or other cover when specified.

For drilled holes, 1 cent extra for each hole per box; drilled and tapped holes, 2 cents for each hole per box; minimum charge per order, 50 cents.

## Type P Columbia Flush Steel Cabinets

**Construction.** Of sheet steel, required thickness to conform with Board of Underwriters'. Removable trim and door. Plain type without ornamental beads; body is formed from one piece of steel with corners folded in and securely welded.

**Finish.** Standard finish is black baked Japan.

**Hardware.** Cabinet is regularly equipped with knob and turn catch. Cabinet with surface area of over 360 square inches is furnished with vault handle.

Cabinet can be supplied with any style hinges, catch or lock.

**Holes for Cutouts, Switches, etc.** Add 1 cent per hole for each box; for tapped holes, 2

cents per hole for each box; minimum charge per order, 50 cents.

**Conduit Drilling.** Cabinet is regularly furnished with standard knockouts: all sizes, including 12x10 inches have one 3/4-inch knockout in center of each side and balance 1/2-inch knockouts; sizes 12x12 inches and up, one 1 1/4 and one 1-inch knockouts located near center of each side with remaining space filled with 1/2-inch knockouts.

For special knockouts, add \$1.00 for each additional size change. Specify if boxes are desired without knockouts.

Approved cabinet will be furnished unless otherwise ordered.

\*Last two figures of box number indicate box height.

For panel with 1 and 2-pole branches, convert to total number of 1-pole branches and obtain price of corresponding panel, then add \$1.00 for each 2 pole substituted for two 1-pole branches.

When ordering, specify number, number of single and/or double pole branches, ampere rating of mains, flush or surface mounting and price.

## Square D Multi-Breaker Type MB Load Centers

For Use on A.C. Systems Only  
With Individual Trip

### Schedule B1

**MAINS:** Insulated (Groundable) Neutral—Underwriters' Approved As a Panelboard for Use As a Load Center beyond the Service Equipment, or from One to Six Circuits As Service Equipment Where Required by Local Rules.

**BRANCHES:** Lighting Circuits—2-Wire S/N 115 Volts A.C. Single Pole Breaker (Form MB) and Neutral.  
Range, Water Heater and Subfeed Circuits—3-Wire S/N 115/230 Volts A.C. Double Pole Breaker (Individual Trip) and Neutral.

Specify 15, 20, 25, 35 or 50-ampere one-pole branch circuits desired for each number ordered.

For flush devices, add F to number. For surface devices, add S to number.

No. 35041F

No. 57160S

\*No. 8 wire terminals.

†Where ampere ratings are not shown on M50A frame breakers, any capacity from 15 to 50 amperes can be furnished.

†Prices shown are for surface mounting. For flush mounting add \$2.50 on Form M2.

\*\*Can also be furnished with 100-ampere bussed mains.

## Square D Multi-Breaker Lighting Panelboards—3 or 4 Wire Mains

Schedule B-2

Type NM1B-3 panels may contain a maximum of 18 double-pole circuits. No. NM1B panels may have more than 4 poles of 35 or 50-ampere capacity (a maximum of 2 double poles or 4 single poles of 35 or 50 amperes). For panelboards having more than 35 or 50-ampere poles, refer to Type NM1-3 panels listed below.

May contain all 1-pole circuits, all 2-pole circuits (not exceeding 20 per panel) or any combination of 1 and 2-pole circuits (not exceeding 42 poles per panel).

May contain all 1-pole circuits, all 2-pole circuits (not exceeding 20 per panel) or any combination of 1 and 2-pole circuits (not exceeding 42 poles per panel).

## Type NM1B-3

**MAINS.** 3-Wire S/N 115/230 Volts A.C. Only.  
**BRANCHES.** 2-Wire 115-Volt S/N 15-Ampere Single Pole Breakers—Form MB.  
**CABINET.** Single Door; 15 Inches Wide and 4½ Inches Deep. Finish: Front, Academy Brown; Box, Galvanized Steel.

\*For use on panelboards with 3-wire mains only.

†Main breakers are limited to 100 amperes.

Prices are for panels either 8 $\frac{1}{2}$  or 7 $\frac{1}{4}$  inches wide.

Wiring gutters are at top, bottom and left side. Top gutter varies from 6 to 10 inches, depending on neutral bar which is placed there since branch feeders usually come into that end of box. Bottom gutter is 4 inches high. Side gutter is 3 $\frac{1}{4}$  inches wide in the 8 $\frac{1}{2}$ -inch wide cabinet, and 1 $\frac{1}{4}$  inches wide in the 7 $\frac{1}{4}$ -inch wide cabinet.

It is recommended that panels with 16 or more poles have cabinets 6 $\frac{1}{2}$  inches deep instead of 4 $\frac{1}{2}$  inches, so that additional wiring space in back of interior may be had. When cabinets 6 $\frac{1}{2}$  inches deep are desired, increase above prices by 5 per cent (before adding for double pole branches when required).

These panels can be furnished with cable troughs and pull boxes for H-beam mounting. Prices on request.

Listing are based on 15-ampere breakers, which will be furnished unless otherwise specified. The 20, 25, 35 or 50-ampere breakers will be furnished at no extra charge if specified, except that increased mains may be required; see additions in table at right.

For panels having combination of 1 and 2-pole branches, all fed from same bus and under one door, determine total number of poles in branches. With this equivalent number of 1-pole circuits, obtain price of panel from tables shown, and add \$1.00 for each 2-pole circuit.

All 2-pole branch circuit breakers have separate trip.

Standard knockouts are furnished in top and bottom ends of all boxes, except the boxes for Types NMM-3XX and NMM-4XX which are furnished with blank top and bottom ends as standard.

When space only for further branches is required, figure panels on basis of total number of branches and deduct \$1.00 for each breaker pole omitted.

When any panel has both 1 and 2-pole branches, or two or more capacities of breakers, the Square D Company reserves the right to determine the relative positions of the branches on the panels.

**When ordering,** specify number, number of 1-pole and 1 or 2-pole branch circuits, ampere rating of each branch, ampere rating of mains, flush or surface mounting, and price.

### Square D Circuit Breaker Lighting Panelboards

#### Schedule G

Prices are based on 15-ampere breakers. The 10, 20 and 25-ampere breakers can be supplied at the same price. For 35 and 50-ampere breakers, add \$1.00 per single pole and \$2.00 per double pole. Add for increased mains, if required.

### Square D Saflex Distribution Panels

A Special Combination Lighting and Distribution Panelboard In a Box 20 Inches Wide

The Square D Saflex Distribution Panel was first designed to meet the rigid requirements of the industrial field, with the thought of providing a maximum degree of safety, convenience and dependability in a compact form to control electric service and feeders supplying current for power, heat and light. The Saflex fusible switch units used in these panels have proved, over a decade of actual use, to be highly desirable where trouble-proof service is essential. They insure undisturbed control of electric current where interruptions in electric service are very costly and therefore cannot be allowed.

The Saflex panelboard is made up of interchangeable switch units mounted upon steel channels within a steel cabinet with copper bus bars mounted in an isolated bus compartment in the rear of the switch units. All Saflex panels are listed and approved by Underwriters' Laboratories, Inc.

Saflex panels are used and highly recommended by many of the largest industries in the United States and Canada. They can also be found in many other parts of the world. They are ideally suited for industrials, schools, hospitals and other buildings where safety and dependability are of prime importance. They can be furnished for controlling any of the following services:

- 125, 250 or 575 volts, 3 phase, 3 wire, a.c.
- 120/208 volts, 3 phase, 4 wire, a.c.
- 115 or 230 volts, 1 phase, 3 wire, a.c.
- 125, 250 or 575 volts, 1 phase, 2 wire, a.c.
- 115 or 230 volts, 3 wire, d.c.
- 125, 250 or 600 volts, 2 wire, d.c.

#### Special Combination Lighting and Distribution Panelboards

Special combinations can be furnished in addition to the standard Saflex units. These may include double throw Saflex switch units, motor starters, meters, current transformers, etc. Prices and complete information upon request.

## Bull Dog Main Service, Range and Lighting Cabinets

Sequence: Meter—Switch—Fuse

Dead Front Construction  
Main Switch Fusible—125/250 Volts A.C. Grounded Solid  
Neutral 3-Pole, 2 Blades, 2 Fuses

No. 551204BKC

Boxes are made from code gage steel, either galvanized or finished to match the fronts. Fronts have black finish and are supplied with pull rings and spring catches.

## Bull Dog Nofuze Lighting Panels and Cabinets

## Circuit Breaker Type

These panels have circuit breakers in the branches in lieu of toggle switches and fuses.

They are adapted for use in buildings where circuits are subject to overloads which would involve much fuse replacement and where frequent switching is done at the panels.

The breakers are quick-make and quick-break with automatic overload trip and inverse-time-limit feature. They cannot be held closed against overload. The trip is automatic and self-indicating with manual reset.

Code gage galvanized sheet steel boxes; width, 20 inches, depth, 5½ inches; gutters, 4 inches. Height of box in inches is indicated by numerals in box catalog numbers shown in tables.

Flush fronts furnished unless surface type specified.

Catalog Nos. listed cover 15-ampere breakers. No increase in price for 20 and 25-ampere breakers. For 35 and 50 amperes, add \$1.00 for single pole and \$2.00 for double pole. Capacity of each branch circuit must be specified on order.

No. NA1B312—with Main Lugs

## Type NA1B3

3-Wire, Single Phase, 125/250 Volt, Solid Neutral

Mains: 125/250 V. 3-Wire, Single Phase, Solid Neutral

Branches: 125 V. 2-Wire with 15 Amp. S.P. Circuit Breakers A.C. or D.C.

\*Spare space included in these panels for 2 future S.P. circuit breakers.

## Bull Dog Superba Lighting Panelboards

**CABINET.** Box, Code Gage Galvanized Steel—20 Inches Wide, 5½ Inches Deep, 4-Inch Gutters.  
Height in Inches is Indicated by Numerals in Box Numbers.  
**Front, Code, Thickness Steel, Black Finish—Flush Spring Locks.**

**Modified Type.** Has the improved features of the Superba design, but is furnished without separate doors over fuses.  
**Standard Type.** Equipped with separate doors over the fuses of each branch circuit, interlocked with the toggle switches for safety.

Numbers and prices include complete panel (less fuses) and cabinet.

Flush fronts will be furnished unless surface type is specified on order.

## Single Fusing—3/2 Wire, Solid Neutral

**MAINS.** 3-Wire, 125-250 Volts.

**BRANCHES.** 2-Wire, 125-Volt, 30-Ampere Single Pole Toggle Switch and Fuse.

**Mains. Lugs Only, Solid Neutral**
